SUBJECT INDEX

Asterisk (*) indicates abstract of paper read before the American Association for Cancer Research, April 1950.

Acetamide, use of, in meostagmin reaction. Polya and Dunn, 545

2-Acetylaminoindole, carcinogenicity of, influenced by dietary factors. Engel, * 215

—, effect of partial ablation of bone marrow and of splenectomy on hepatic lesions produced by. Stanney, Paschalis, and Cantarow, 293

—, on induction of accessory limbs in salamanders. Breedis, * 205

—, on testosterone-induced comb growth. Paschalis and Cantarow, * 294

—, effects on the dog. Allison, Wase, Leathem, and Wainio, 266

—, excretion of diazotizable material by rats after feeding. Morris and Westfall, 506

—, liver tumor induction with, relation to thyroid activity. Leathem and Barken, * 291

—, production of eye tumors in female rats by feeding of. Copeland and Engel, * 211

—, recovery from rats following oral administration. Dyer, Ross, and Morris, * 214

2-Acetylaminoindole-9-C14, distribution in the rat. Weisburger, Weisburger, and Morris, * 447

—, of radioactivity after feeding of. Morris, Weisburger, and Weisburger, 620

—, synthesis of. Ray and Geiser, 616

2-Acetylaminoindole-ω-C14, distribution in the rat. Weisburger, Weisburger, and Morris, * 447

—, of radioactivity after feeding of. Morris, Weisburger, and Weisburger, 620

—, synthesis of. Ray and Geiser, 616

Acid-soluble phosphorus in normal, pregnancy-stimulated, and cancerous mammary glands of inbred mice. Albert, Johnson, and Cohain, * 201

ACTH, cancer patients receiving, observations in. Homburger, Bonner, and Fishman, * 223

—, causing remission of acute leukemia. Pearson, Eliel, and Talbot, * 235

—, effect on adrenal function in patients with neoplastic disease. Dobriner, Lieberman, Wilson, and Rhoads, * 213

Adenocarcinoma, distribution of radioactive 8-azaguanine in mice with. Bennett, Skipper, Mitchell, and Sugirua, 644

—, of 8-azaguanine on. Sugirua, Hitchings, Cavaliere, and Stock, 178

— of 3-bis(2-chloroethyl)aminomethyl-5-methoxy-methyl-5-hydroxy-6-methyl pyridine dihydrochloride, 2,4,6-tris(1-aziridyl)-s-triazine, and 8-azaguanine on. Sugirua and Stock, * 244

— of cortisone and other steroids on. Sugirua, Stock, Dobriner, and Rhoads, * 244

— localization of radioactive compounds in. Myers, * 234

—, mammary, effect of 8-azaguanine on. Gelhorn, Engelman, Shapiro, Graff, and Gillespie, 170

—, Eo 771, effect of virus of Russian encephalitis on. Moore and Stock, * 235

—, K. Karmofsky, effect of virus of Russian encephalitis on. Moore and Stock, * 235

—, nucleic acids in, from animals injected with radioactive 8-azaguanine. Mitchell, Skipper, and Bennett, 647

Adenosine pyrophosphatase activity changes during early phases of liver regeneration in rat. Rosenthal, Rogers, and Fahl, * 237

Adrenals changes, postcastration, and subsequent development of mammary cancer in inbred stocks of mice and their hybrids. Huseby and Bittner, * 226

— cortical hyperplasia, congenital, biopay and steroid-excretion studies in. Gardner, Sniffen, Zygmuntowicz, and Talbot, * 218

—, tumor formation, effect of hormones on. Woolley, * 220

—, tumors, demonstration of active carbonyl groups in. Seligman and Ashbel, * 240

—, grafting, effect on transplanted lymphatic leukemia in rats. Murphy and Sturm, 101

—, tumors in rats treated with pituitary growth hormone. Moon, Simpson, Li, and Evans, 364

Adrenals and blood plasma, lipids of, in cancer. Bloor, Haven, and Ashworth, * 203

Adrenocorticotropic hormone of the pituitary. See ACTH.

Acrobic and anaerobic incorporation of radioactive phosphate and radioactive glucose fragments by normal and cancer tissue in vitro. Winzler, Krause, and Slater, * 240

Age, effect on rat liver regeneration. Bucher and Glinos, * 234

— of host and ovaries, influence on tumorigenesis in intrasplenic and intrapancreatic ovarian grafts. Li and Gardner, 162

Agglutinins, natural antitumor, and milk agent in mice of inbred strains. Davidsson, Stern, and Bittner, * 212

—, natural antitumor, in mice of inbred strains. Davidsson and Stern, * 211

— produced in rabbit by injections of purified extracts of biopsied Hodgkin's lymph node. Grad, * 221

Agglutinogen, possible identity in transplantable tumor and red blood cells of inbred mice. Kalas and Jay, * 227

Alamine, C14-labeled, turnover in proteins of rat liver. Bucher and Frantz, * 207

Aldehyde activity, in vitro, of sarcoma 37, effect of tumording-compounding drugs on. Waravdekar and Leiter, * 247

A-methopterin, anti-leukemic effect prevented by citrovorum factor. Burchenal, Johnston, Broquist, and Jukes, * 208

—, effect on transplanted myeloid and lymphoid leukemia of F strain of mice. Kirschbaum, Geisse, Judd, and Meyer, 762

—, inhibition of nucleic acid synthesis by. Skipper, Mitchell, and Bennett, 510

Amino acid analogs, effect on growth of transplantable tumors. Greenberg, Irish, and Gal, * 221

— metabolism, changes in, associated with chronic caloric restriction. Barton, Boulwell, and Bush, * 202

Amino acids, changes during epidermal carcinogenesis—review. Carruthers, 255

—, free, in normal and neoplastic tissues. Roberts and Frankel, * 237

—, use of labeled, in study of protein metabolism of normal and malignant tissues—review. Zamznik, 659

D-Amino acids in tumor proteins—review. Miller, 65

Aminosonic dye, carcinogenic, effect on liver cell structure. Cunningham, Griffin, and Luck, 194

— dyes, effect of feeding, on intracellular composition of livers of rats. II. Price, Miller, Miller, and Weber, 18

III. Potter, Price, Miller, and Miller, 28
Aminopterin, effect on testosterone-induced comb growth. Paschikia and Cantarow.* 234
p-Aminohippuric acid synthesis by rat liver tumor. Tung and Cohen, 793
4-Aminopteroylglutamic acid. See 8-Azaguanine.

Aspergillus
Arsenicals, 5-Amino-7-hydroxy-1—p-Aminohippuric acid, and thymidine. Goldsmith and Harlow.* 280
— on transplanted myeloid and lymphoid leukemias of F strain of mice. Kirschbaum, Geisse, Judd, and Meyer, 762
—, inhibition of nucleic acid synthesis by. Skipper, Mitchell, and Bennett, 510

Benzimidazoles, Aminofluorene, 812

Bromobenzene, effect on metabolism of radioactive L-cystine. Gutmann and Wood, 8

Castrated, use of thorotrast in visualization of formation of liver tumors in mice during treatment with. Wilson, Leduc, and Corner,* 240

Cancer
Carcinomas, effect of 4-tertiary-butylmercaptoacetamide on. Ash, 237
—, effect on regenerative growth after ablation by. Youngner and Salk.* 250
—, radioactive, distribution in mice with Eo771 tumors. Bennett, Skipper, Mitchell, and Sugita, 644
—, nucleic acids of viscera and tumor tissue from animals injected with. Mitchell, Skipper, and Bennett, 647

Azodyes, sulfonated, influence on mouse tumors. Stern, 243, 565

Bacteria, use of. Hill, 255

Bacteria, use of thorotrast in visualization of formation of liver tumors in mice during treatment with. Wilson, Leduc, and Corner,* 240

Bacterial infections, effect on neoplastic diseases. Bierman, Hammon, Eddie, Meyer, and Shinkin,* 203

BAL See 2,3-Dimercaptopropanol.

Benzo(a)pyrene, 3,4-D-Nitrobenzylmesylate, induction of parotid gland tumors by. Bauer and Byrn, 755

Benzo[a]pyrene, anti-leukemic assays on. Skipper, Bennett, Edwards, Bryan, Hutchison, Chapman, and Bell, 166

Benzo(a)pyrene, effect on induction of accessory limbs in salamanders. Breedis,* 205

Beryllium, effect on growth. Hoagland and Hood.* 224
Beryllium-induced osteogenic sarcoma. Hoagland, Grier, and Hood, 629

Bioassay, specific effects in vitro on cells of transplantable mouse leukemia. Werder, Kirchbaum, and Syvertson,* 248

Antigens, immediate and delayed anticomplementary effects, and their dependence upon hemolysin concentration. Thornton, Ellerbrook, Lippincott, and Fong.* 245
—, tumor lipoid, clinical evaluation. Hall, Penn, Dowdy, and Bellamy,* 283

Antigens, tumor lipoids ass. Penn, 285

Antiserum in cytotoxic studies on mouse mammary cancer cells. Imagawa, Bittner, and Syvertson,* 226

Antitrypsin levels, plasma, during growth of rat fibrosarcoma. Waldvogel and Schmitt, 371

Arginase activity changes during early phases of liver regeneration in rat. Rosenthal, Rogers, and Fahl,* 237

Arsenic salts, trivalent, as modified by 2,3-dimercaptopropanol (BAL) and by adrenal extracts, lethal and tumor-damaging effects of. Beck,* 202

Aspergillus fumigatus, tumor-inhibiting agent produced by. Reilly and Stock,* 256

8-Azaguanine, effect on acute lymphoid leukemia of mice. Law, 186
—, — on carcinoma, sarcoma, osteogenic sarcoma, lymphosarcoma and melanoma in animals. Sugita, Hitchings, Cavaliere, and Stock,* 178, 244
—, — on growth of transplantable tumors. Greenberg, Irish, and Gal,* 821
—, — on variety of tumors in experimental animals. Gelhorn, Engelman, Shapiro, Graff, and Gillespie, 170
—, — on viral multiplication and on growth of chick embryo. Youngner and Salk,* 250
—, —, radioactive, distribution in mice with Eo771 tumors. Bennett, Skipper, Mitchell, and Sugita, 644
—, —, nucleic acids of viscera and tumor tissue from animals injected with. Mitchell, Skipper, and Bennett, 647

Azo dyes, sulfonated, influence on mouse tumors. Stern, 243, 565

Bacterial infections, effect on neoplastic diseases. Bierman, Hammon, Eddie, Meyer, and Shinkin,* 203

BAL See 2,3-Dimercaptopropanol.

1,2-Benzanthracene, induction of parotid gland tumors by. Bauer and Byrn, 755

Benzimidazoles, anti-leukemic assays on. Skipper, Bennett, Edwards, Bryan, Hutchison, Chapman, and Bell, 166

3,4-Benzpyrene, effect on induction of accessory limbs in salamanders. Breedis,* 205

—, — on metabolism of radioactive L-cystine. Gutmann and Wood, 8
—, —, — on testosterone-induced comb growth. Paschikia and Cantarow,* 234
—, —, —, formation of protein-bound derivatives in skin of mice. Miller,* 239
—, —, —, urinary excretion of mercapturic acids after administration of. Gutmann and Wood, 701

Beryllium, effect on growth. Hoagland and Hood,* 224
Beryllium-induced osteogenic sarcoma. Hoagland, Grier, and Hood, 629

Bifluorylidene, carcinogenic properties of. Morris and Dubnik,* 225
3-Bis (5-chloroethyl) aminomethyl-4-methoxy-methyl-5-hydroxy-6-methyl pyridine dihydrochloride, effect on carcinoma, sarcoma, osteogenic sarcoma, lymphosarcoma, and melanoma in animals. Sugita and Stock,* 244

Bladder cancer in rats, 2-acetylaminofluorene-induced, effect of added dietary tryptophane on occurrence of. Dunning, Curtis, and Maun, 446

Blood of cancer patients, effects of testosterone and estrogens on concentration of vitamin A in. Danish and Kloppe,* 211
—, plasma, lipids of, in cancer. Bloor, Haven, and Ashworth,* 205

Bone marrow, partial ablation of, effect on hepatic lesions produced by 2-acetylaminofluorene. Stasich, Paschikia, and Cantarow, 283

Breast carcinoma, estrone conversion capacity of blood of postmenopausal women. Werthesen, Schwenk, Baker, and Field, 679
—, —, metastatic, effect of testosterone propionate therapy on excretion of hormones by patients with. Segaloff, Schlosser, Horwitt, Gordon, and Murison,* 240

Bromobenzene, effect on metabolism of radioactive L-cystine. Gutmann and Wood, 8

—, —, —, urinary excretion of mercapturic acids after administration of. Gutmann and Wood, 701

Brown-Pearce carcinoma, effect of 8-azaguanine on. Gelhorn, Engelman, Shapiro, Graff and Gillespie, 170

Calcium metabolism in relation to citric acid metabolism in carcinogenesis. Miller and Carruthers, 636

Carcinogenicity, chronic, and changes in amino acid metabolism associated with it. Barton, Boutwell, and Rusch,* 202

Cancer, actual and potential, mass screening of population for. Schram,* 239
—, arising from virus-induced papillomas of domestic rabbits, etiological study of. Rogers, Kidd, and Roux,* 237
—, cells, human, changes in mitotic mechanism of. Timonen and Therman, 431
—, chemotherapy, fractionated regional. Kloppe, Bateman, Berry, Alfrod, and Winship,* 229
—, —, human, serum albumin in. Jensen and Huggins,* 227
—, —, of mouth and respiratory system and tobacco smoking habits. Mills and Porter, 359
—, of reproductive organs produced by pituitary growth hormone. Moore, Simpson, Li, and Evans, 549
—, —, research, business of. Aub, 399
—, —, tissue, in vitro incorporation of radioactive phosphorus and radioactive glucose fragments by. Winzler, Krause, and Slater,* 249

Cancerous rat tissues, desoxyribonucleic acid content of. Cunningham, Griffin, and Luck,* 211
—, rats, catalase studies in. Appleman, Skavinski, and Stein, 498

Carbohydrate metabolism, cross-connections with protein metabolism, in rat liver tumor. Zamenik and Stephenson,* 251

Carbon 14, studies on hazard involved in use of. Hill, Bell, and Chapman, 362
—, trichloride, use of thorotrast in visualization of progress of liver injury during treatment with. Wilson, Leduc, and Corner,* 240
1,2,5,6-Dibenzofluorene, delaying effect on methylcholang-
their carcinogenesis. Wartman, Shubik, Hill, Reeb, Stang-
er, and Riegel,* 247

Dichloroethyl sulfide, carcinogenic action of. Heston,* 244

Dietary factors, influencing carcinogenicity of 2-azacytina-
fluorine. Engel,* 215

Fatty, effect of on proportions of formation of mammmary

carcinoma in mice. Silverstone and Tannenbaum, 448

Diets, influence on formation of liver tumors in rats. White,
Hein, and White,* 249

2,3-Dimercaptopropanol-modified trivalent arsenicals, lethal
and tumor damaging effects of. Beck,* 202

4-Dimethylaminobenzene, studies on xan-
tine oxidase during. Westerfeld, Richert, and Hilfinger, 498

—, effect of on concentrations of production of liver
tumors in rats. White and Hein,* 248

—, on testosterone-induced comb growth. Paschik and
Cantarow,* 254

—, histochemical localization of alkaline phosphatase during
carcinogenesis with. Pearson, Novikoff, and Morrione, 557

—, reductive cleavage by rat liver homogenates: reactivation
of enzyme system by ribofuran-adenine dinucleotide.
Mueller and Miller,* 254

4-Dimethylaminobenzene induced rat liver tumors cul-

tivated in fertile eggs. Gray, Armstrong, and Ham,* 281

4-Dimethylaminothielen, hydrochloride, effects on phospho-

protein phosphatase of tumor-bearing rats. Feinstein and
Volk, 96

—, on tissue cathspsins of tumor-bearing rats.
Feinstein, 98

9,10-Dimethyl-4-benzanthracene, induction of parotid gland
tumors by. Bauer and Byrne, 755

—, in studies on promoting phase in stages of carcinogenesis.
Shubik, 13

—, joint action with Shope virus to induce cancer. Rous and
Rogers,* 289

—, repeated applications, or single application followed by
cotton oil treatment, comparison of skin tumors induced by
Shubik,* 411, 713

Drosophila melanogaster, effect of aminopterin reversed by
tumor allonic acid, thymidine. Goldsmith and Harms,* 280

—, tumors, studies on. Burdette,* 209

Enzyme activities, changes during early phases of liver regener-
ation in the rat. Rosenthal, Rogers, and Fahl,* 237

—, epidermal carcinogenesis—review. Car
ruthers, 255

—, inhibitors of serum in relation to neoplastic disease ac-

tivity. West,* 484

Enzymes and intracellular composition of liver from rats fed
aminoguan dyes. Popen, Price, Miller, and Miller, 28

—, in normal and neoplastic tissues demonstrated with new

tetrazolium salt. Rutenberg, Gofstein, and Seligman, 113

—, See Aldolase, Arginase, etc.

Epidermal carcinogenesis, chemical studies on—review. Car
ruthers, 255

—, citric acid and calcium metabolism in. Miller and
Carruthers, 686

—, further evidence for alteration in structure of a polarcographically reducible substance in. Carruthers and
Suntzeff, 339

—, in mice, histochemical study of. Thomas and Stei-
nitz,* 245

Erythromelanomas, hereditary, in platyfish-swordtail hybrids, histological and cytological observations on. Nigrelli, Jakow-
ska, and Gordon,* 284

—, in hybrid fishes caused by effect of two linked colors genes
on atypical growth of erythroblasts and macromelanophores. Gordon and Nigrelli,* 260

Estradiol, effects on x-ray-induced leukemia in mice. Gard-
ner,* 219

Estragen, synergistic action with x-rays in inducing thymic
lymphosarcoma of mice. Kirschbaum,* 229

— treatment causing malignant renal tumors in male ham-

sters. Kirkman and Bacon, 142

—, vaginal sensitivity to, as related to mammary tumor in-
cidence in mice. Tentlin,* 246, 580

Estrogens, effects on concentration of vitamin A in blood of

cancer patients. Danish and Kloppe,* 211

—, production of cytological alterations in lymphocytes by.
Santisteban, Schebelli, and Dougherty,* 259

Estroze conversion capacity of blood of postmenopausal wom-

s with carcinoma of breast. Werthessen, Schwenk, Baker,
and Field, 679

Ethylenimine derivatives, effect on transplanted mouse leu-

kemia. Burchenal, Johnston, Stock, Crossley, and Rhodes,* 208

—, inhibition of sarcoma 180 by. Buckly, Stock, Cross-

ley, and Rhodes,* 207

Etiology of cancer, tobacco smoking as factor in. Schrek, Baker,
Ballard, and Dolgoth, 49

Explant cells, cultivated in vitro, morphology and growth pat-

terns of, in Hodgkin's syndrome. Hoster and Reiman, 483

Eye tumors in female rats, produced by feeding 2-azachinflu-

orine. Copeland and Engel,* 411

Fasting, intermittent, failure to inhibit formation of mammary
carcinoma in mice by. Tannenbaum and Silverstone, 477

Fat, dietary, effect of proportion of on formation of mammary
carcinoma in mice. Silverstone and Tannenbaum, 448

Fibroblasts, cultured, effect of injection into strain C3H mice.
Earle, Shelton, and Schilling,* 214

—, mouse, further transformations in vitro to sarcomatous
cells. Sanford, Earle, Becker, Schilling, Duchene, Likely,
and Shelton,* 258

Fibrosarcoma, methylcholanthrene-induced, effect of virus of

Russian encephalitis on. Moore and Stock,* 233

—, mouse, effect of fursin on. Friedgood and Green,* 217, 613

—, rat, plasma, antitypsis levels during growth of. Wuldo-

gel and Schmitt, 371

Flezer-Jobling carcinoma, effect of 8-azaguanine on. Sugiu-

ra, Hitchings, Cavalleri, and Stock, 178

—, of 8-bis (2-chloroethyl) aminomethyl-4-

methoxy-methyl-5, hydroxy-4-methyl pyridine dihydrochlor-

ide, 4,6-tri (1-aziridyl)-tri-aziridane, and 8-azaguanine on.
Sugiu and Stock,* 244

—, of cortonane and other steroids on. Sugiu,
Stock, Dobriner, and Rhodes,* 244

—, homogenates, pyruvate metabolism in. Stoess,
Heidelberg, and LePage,* 243

Fluoroacacetate, citric acid content of normal and tumor tissues
in vivo following injection of. Potter and Busch,* 256, 553

4'-Fluoro-4-diethylamlnobenzene, effect of feeding, on
intracellular composition of livers of rats. Price, Miller,
and Weber, 18

Folic acid antagonists. See Aminopterin, A-methopterin.

— reversal of aminopterin effect on Drosophila melano-
gaster. Goldsmith and Harms,* 220

Food intake, role in ovarian tumor formation in intrasplenic
ovarian grafts. Miller,* 283

Frog carcinoma, effect of x-rays on, studied by direct micro-
scopic examination of intra-ocular transplants. Lucké and
Schlumberger,* 281

Frozen mouse mammary carcinoma, assay for mammary tu-
mor milk agent. Bittner and Imagawa, 739

Fungi associated with tumor tissues. Diller,* 219

—, isolation from transplanted, chemically induced, and
spontaneous tumors. I. Diller and Fisher, 595

Puracin, effect on growth of fibrosarcoma in mice. Friedgood
and Green,* 217, 613

Gastric carcinoma, attempts to produce experimentally in gas-

tric ulcer. Denton, Sheldon, and Ivy, 694

Genes, two linked color, effect on atypical growth of erythro-

blasts and macromelanophores to form erythromelanomas
in hybrid fishes. Gordon and Nigrelli,* 260
Genital tracts of rabbits and dogs, effect of methylcholanthrene on. Taylor, Pallas, Wilke, McCallin, and Goodman, 360.

Glucose fragments, radioactive, aerobic and anaerobic incorporation by normal and cancer tissue in vitro. Winzler, Krause, and Slater, 249.

Glycine, C14-labeled, turnover in proteins of rat liver. Bucher and Frantz, 207.

Glycolysis, aerobic, of mammary tumours autogenous to dba and C3H strains of mice. Goldfeder, 89.

— anaerobic, in tumor and normal tissues, effect of various factors on rate of. LePage, 77.

Gonadectomy, effect on incidence of radiation-induced lymphoid tumors in strain C57 black mice. Kaplan, 248.

Granulocytic cells, effect of nitrogen mustard on. Osgood and Chu, 90.

Granulosa-cell tumor, transplanted, effect on parabiotic mice. Wolstenholme, 344.

Growth inhibitor, effects on phosphoprotein phosphatase of tumor-bearing rats. Feinstein and Volk, 96.

— on tissue cathepsins of tumor-bearing rats. Feinstein, 96.

Hair anlage, tumor of. Wallace and Halpert, 246.

Hamster cheek pouch, growth rate of tumor transplants in. Lutz, Fulton, Patt, and Handler, 231.

Harding-Passey melanoma, effect of 8-azaguanine on. Sugiuira, Hitchings, Cavalleri, and Stock, 178.

— of 5-bis (8-chloroethyl)aminomethyl-4-methoxy-5-hydroxy-5-methyl pyridine dihydrochloride, 2,4,6-tris (1-aziridyl)-s-triazine, and 8-azaguanine on. Sugiuira and Stock, 244.

— of cortisone and other steroids on. Sugiuira, Stock, Dobrinier, and Rhoads, 244.

— of virus of Russian encephalitis on. Moore and Stock, 233.

Heat coagulation of serum in cancer; Method applicable to very small quantities of serum. Ponder, 139.

Hemangioblastoma, demonstration of active carbonyl groups in. Seligman and Ashbel, 240.

Hemolysin concentration, dependence of immediate and delayed anticomplementary effects of serum and antigen on. Thornton, Ellerbrock, Lippincott, and Pong, 245.

Hepatoma. See Liver tumor.

Hepatitis, effect on Walker carcinoma 256. Herbut, Kraemer, and Jackson, 224.

Hepthyl aldehyde—sodium bisulfite addition product. See Hepthyl.

Heterologous growth of sarcoma 180 with progression to death of hosts. Patti and Moore, 674.

— tissues, intra-ocular transplantation of. Morris, McDonald, and Mann, 36.

Histoenzymatic demonstration of β-glucuronidase and sulfatase. Seligman, Nachlas, and Cohen, 240.

— study of epidermal carcinogenesis in mouse. Thomas and Steinitz, 845.

Histogenesis of tumors induced by intramuscular inoculation of cell-containing leukotic material. Pikovski and Doljan- ski, 1.

Hodgkin's disease blood serum, effect on lymphocytes of normal mouse lymph nodes in tissue culture. Worken and Chambers, 250.

— lymph nodes, purified extracts, production of agglutinins in rabbit by injection of. Grand, 221.

— syndrome, studies in. X. Hoste and Reiman, 423.

Homogenates and ultracentrifugation of mouse tissues, growth enhancement of tumor homotransplants in mice after injections of. Kalis, Jonas, and Avnet, 228.

Homologous hosts, transplantation of mouse neuroblastoma C1300 to. Eichwald, Evans, and Browning, 483.

—, pituitary growth, producing tumors of adrenal glands. Moon, Simpson, Li, and Evans, 564.

— of pulmonary and lymphatic tissues. Moon, Simpson, Li, and Evans, 297.

— of reproductive organs. Moon, Simpson, Li, and Evans, 549.

Hormones, action on uterine and vaginal implants in mice. Gottschalk and Swarts, 280.

— effect on adrenal cortical tumor formation in mice. Woolley, 250.

— See Estrogen, Cortisone, ACTH, etc.

— "Hormones" involved in normal metamorphosis, effect on carcinogenesis with methylcholanthrene and dibenzanthracene. Franks, Bather, and Thompson, 216.

5-Hydroxy-1,2-naphthalic anhydride, new metabolite in metabolic degradation of 1,2,5,6-dibenzanthracene-9,10-C14. Heidelberger and Wiest, 223.

Immunological tests for papilloma virus in cottontail carcinomas. Syvertson, Wells, Koomen, Dascomb, and Berry, 747.

Indolyl blue, use in color reactions with malignant serum. Weiss, 247.

Induction of accessory limbs in salamanders with mixtures containing carcinogens. Breedis, 205.

Inositol, effect on cholonic deficiency induced neoplasms. Schaefer, Copeland, Salmon, and Hale, 259, 786.

Intestinal lipid of testis in normal and stilbestrol-treated mice, ultraviolet absorption studies on. Finnering, 216.

— tumor of dog, demonstration of active carbonyl groups in. Seligman and Ashbel, 240.

Intracellular composition of livers from rats fed aminoazo dyes. II. Price, Miller, Miller, and Weber, 18.

—, III. Potter, Price, Miller, and Miller, 28.

— of regenerating livers and induced liver tumors, comparison of. Price and Laird, 236, 650.

Intracytoplasmic physiological media, action on sol-gel reactions. Kopac, 229.

Intra-ocular transplantation of heterologous tumors. Morris, McDonald, and Mann, 36.

Intrasplenic and intraperitoneal ovarian grafts, tumorigenesis in, influenced by age of host and ovaries. Li and Gardner, 162.

Invertebrates, tumors in—review. Scharrer and Lochhead, 403.

Iodine, radioactive, distribution of, in mice with and without tumor 15091a after injection of radioactive sodium iodide. Stevens, Meinken, Quinlin, and Stewart, 155.

—, nitrogen mustards labeled with, distribution of. Friedman, Rutenberg, and Seligman, 218.

— thyrloxin labeled with, distribution in CSH and C37 mice. Gross and Schwartz, 222.

Phosphatase, a-Peltatin, Papillomas
Parotid Ovary

Berry, rates

intrapancreatic Wolstenholme, Morrione, Berry, rats

incorporation per, Hood, dyes.

incorporation of, Waravdekar in vivo induced from.

incorporation of, Wells, and transplanted virus-induced, and subsequent castration. Biskind, Kordan, and Biskind, 309

Oxalacetic acid, measurements in normal and neoplastic rat tissue. LePage, 598

— oxidase and intracellular composition of livers from rats fed aminoazo dyes. Potter, Price, Miller, and Miller, 28

Oxygen uptake of mammary tumors autogenous to dba and C3H strain of mice. Goldfelder, 89

Papillomas of domestic rabbits, virus-induced, etiological study of cancers arising from. Rogers, Kidd, and Roux. 237

Papilloma-to-carcinoma sequence, virus-induced. I. Syverton, Dascomb, Koomen, Wells, and Berry, 579

II. Syverton, Dascomb, Wells, Koomen, and Berry, 446

III. Syverton, Wells, Koomen, Dascomb, and Berry, 474

Parabiotic mice, effect of transplanted granulosa-cell tumor on. Wolstenholme, 344

rats, liver regeneration in. Bucher, Scott, and Aub, 207

Parotid gland, induced tumors of. Bauer and Byrne, 755

a-Peltatin, in vitro effects on several enzymatic activities of sarcoma 37. Varadwajkar and Leiter, 247

Phosphatase, alkaline, activity changes during early phases of liver regeneration in rat. Rosenthal, Rogers, and Fahl, 237

— histochemical localization during carcinogenesis in rats fed 4-dimethylaminoazobenzene. Pearson, Kovikoff, and Morrione, 557

— phosphoprotein, in tumor-bearing rats, affected by growth inhibitor and other factors. Feinstein and Volk, 90

Phosphorus, acid-soluble, lipid and protein, in normal, pregnancy-stimulated, and cancerous mammary glands of inbred mice. Albert, Johnson, and Cohan, 201

—, nucleic acid, in normal, pregnancy-stimulated, and cancerous mammary glands of inbred mice. Johnson, Albert, and Cohan. 227

—, radioactive, aerobic and anaerobic incorporation by normal and cancer tissue in vitro. Winzler, Krause, and Slater. 249

—, different turnover rate in different types of nuclei in rabbit liver. Marshall, 282

—, histological changes produced by single large injection in albino rats and C3H mice. Grad and Stevens, 289

—, incorporated in nucleic acids of normal and precancerous livers and of liver tumors. Griffin, Cunningham, Brandt, and Kupke. 282

—, production of malignant tumors in rats by. Koletsky, Bonte, and Friedell, 129

—, uptake and distribution in chicken eggs containing a rapidly growing mammary tumor of a C3H mouse, Galinsky, 642

Photochemical formation of carcinogens from skin fats. Snapp, Niederman, and Rothman, 75

Pituitary growth hormone. See Hormone, pituitary growth.

Pituitary-adrenal cortex mechanism, in patients with breast cancer, effect of testosterone on. Falcon, Owens, Broughton, and Gorham, 215

Plant seedlings, stuntihg caused by irradiation. Quastler, 236

Plasma antitrypsin levels during growth of rat fibrosarcoma. Waldvogel and Schmitt, 371

Polarographically reducible substance in carcinogenesis, further evidence for alteration in structure of. Carruthers and Suntzeff, 209, 339

Polysaccharide content of serum fractions in carcinoma, arthritis, and infections. Shetlar, Shetlar, Richmond, and Everett, 861

— levels, serum, in rats bearing Walker carcinoma 256. Shetler, Erwin, and Everett, 445

Population, mass screening for cancer, actual and potential. Schram, 289

Potassium arsenite, effect on transplanted mouse leukemia. Geisse and Kirschbaum, 108

Preneoplastic manifestations in mammalian thyroid glands, factors influencing. Van Dyke, 246

Presidential address, April 1930. Aub, 389

Pressure, increased, effect on sarcoma 180. Arkin and Sugiuira, 273

Proliferation of rabbit marrow cells in vitro, effect of xanthoterin and related agents on. Bieseke and Berger, 866

Promoting phase in stages of carcinogenesis in mice, rats, rabbits, and guinea pigs. Shubik, 18

Prostate carcinomas, metabolic studies, and effects of stilbestrol therapy in patients with. Schilling, Bellin, Gottesman, and Laslo, 289

Protein and metabolic studies in multiple myeloma. Stern and Laslo, 242

— depletion, effect on host response to transplantable Walker carcinomia 256. Green, Benditt, and Humphreys, 789

— depletion-repletion, effect on choline deficiency-induced neoplasms. Schaefer, Capeland, Salmon, and Hale, 239, 786

— metabolism, cross-connections with carbohydrate metabolism, in rat liver tumor. Zamecnik and Stephenson, 251

— of normal and malignant tissues, use of labeled amino acids in study of. Zamecnik, 659

— phosphorus in normal, pregnancy-stimulated, and cancerous mammary glands of inbred mice. Albert, Johnson, and Cohan. 201

Protein-bound derivatives of 3,4-benpyrene, formation in skin of mice. Miller, 282

Proteins, basic, of cell nucleus. Bloom, Codgell, and Lewis, 205

—, cytoplasmic, partial physical and chemical characterization of. Barry, 694
Cancer Research

820

Serum, immediate and delayed anti-complementary effects, and their dependence upon hemolytin concentration. Thornton, Ellerbrock, Lippincott, and Fong. * 425

— of malignancy, application of tryptophane-acid reaction to. Riegel and Beatty, 485

—, —, —, color reactions with. Weiss * 427

—, normal and Hodgkin's, influence on cellular growth and morphology in tissue culture. Reiman, Stern, Ford, and Hoster, 467

—, tryptophane levels in rats bearing Walker carcino ma. Shetlar, Everard, and Everett, 445

—, protein, heat coagulation of, inhibited by iodoacetate. Duboff, * 219

Sulphur hydrol, content, effect of methyl-bis (β-chloroethyl) amine on. Shacter and Shimkin, * 240

Sinusoidal dilatation occurring in livers of mice with transplanted testicular tumor. Wolstenholme and Gardner. * 420

Skin fats, photochemical formation of carcinogens from. Snapp, Niederman, and Rothman, 73

—, tumors induced by repeated applications of carcinogenic hydrocarbons or by single application of carcinogen followed by croton oil treatment. Shubik, * 411, 713

—, in mice, growth potentialities of. Shubik, 713

Smoking as etiologic factor in disease. I. Cancer. Schrek, Baker, Balard, and Dolgoff, 49

—, habits, and cancer of mouth and respiratory system. Mills and Porter, 530

Sodium bicarbonate, C* labeled, effect of single dose on pattern of deaths from spontaneous leukemia in Ak mouse. Skipper, Bell, and Chapman, 362

—, iodide, radioactive, effect of injection on distribution of radioactive iodine in mice with and without tumor 15091a. Stevens, Meinken, Quinlin, and Stewart, 155

—, sodium reactions, action of intracytoplasmic physiological media on. Kopac, * 229

Splenectomy, effect on hepatic lesions produced by 2-acetylaminofluorene. Stanney, Paschiks, and Cantarow, 285

—, —, on incidence of radiation-induced lymphoid tumors in strain C57Bl black mice. Kaplan, * 228

Squamous-cell carcinoma, effect of virus of Russian encephalitis on. Moore and Stock, * 233

—, free amino acids in. Roberts and Frankel, * 237

Stages of carcinogenesis in mice, rats, rabbits, and guinea pigs, promoting phase in. Shubik, 18

Stillbestrol therapy, effects of, and metabolic studies in patients with carcinoma of prostate. Schilling, Bellin, Gottesman, and Laszlo, * 239

Stillbestrol-treated mice, ultraviolet absorption studies on interstitial cell lipid of testis in. Firminger, * 210

Succinoxidase and intracellular composition of livers from rats fed aminoazo dyes. Potter, Price, Miller, and Miller, 89

Sudan black, use in color reactions with malignant serum. Weiss, * 247

Sulfatase, histochemical demonstration of. Seligman, Nachlas, and Cohen, * 240

Sulfhydryl content of serum, effect of methyl-bis (β-chloroethyl) amine on. Shacter and Shimkin, * 240

Sulfonated azo dyes, effect on mouse tumors. Stern, * 243, 565

Tar, coal, effect on induction of accessory limbs in salamanders. Breed, * 205

Temperature, low, and drying, experiments with, as evidence for virus etiology of tumors—review. Hirschberg and Rusch, 535

—, —, effect on morphology and transplantability of carcinoma 37. Walsh, Greiff, and Blumenthal, 726

—, —, on transplantability of normal and neoplastic tissue. Blumenthal, Walsh, and Greiff, * 205

—, —, See Frozen.

—, storage at, effect on viability of several avian lymphoid tumor strains. Burmester, 708

Teratoid tumors, extragenital and gonadal, comparative morphogenesis of. Friedman, * 218

Teratomas, ovarian bilateral, in mouse. Pawcett, 705

Testicular tumor, transplanted, experimental cellular alteration and decreased growth in. Hooker, * 223

—, —, —, sinusoidal dilatation occurring in livers of mice with. Wolstenholme and Gardner, * 420

Testosterone, effect on concentration of vitamin A in blood of cancer patients. Danish and Kloppe, * 211

—, therapy, effect on excretion of hormone in patients with metastatic breast cancer. Segaloff, Schlosser, Horwitt, Gordon, and Munson, * 240

Testosterone-induced comb growth, effect of carcinogens on. Paschikis and Cantarow, * 234

Tetrazolium salt, tissue respiration studies and tumor visualization with. Black, Kleiner, and Speer, * 204

—, yielding blue pigment on reduction, use in demonstration of enzymes in normal and neoplastic tissues. Rutenburg, Goldstein, and Seligman, 113

Thorotrat, use in visualization of progress of liver injury and development of hepatoma during treatment with carbon tetraodolchloride or azo dyes in mice. Wilson, Leduc, and Corner, * 240

Thymectomy, effect on incidence, latent period, and type of leukemia strains of mice. Law and Miller, * 230

—, —, —, of radiation-induced lymphoid tumors in strain C57 black mice. Kaplan, * 248

Thymidine reversal of aminopterin effect on Drosophila melanogaster. Goldsmith and Hamly, * 220

Thyroid activity, relation to liver tumor induction with 2-acetylaminofluorene. Leithem and Barken, * 251

—, function, role in ovarian tumor formation in intrasplicative ovarian grafts. Miller and Gardner, * 233

—, glands, mammalian, factors influencing preneoplastic manifestations in. Van Dyke, * 246

Thyroxin, effect on Walker carcinoma 256. Herbut, Kraemer, and Jackson, * 224

—, labeled with radioactive iodine, distribution in C3H and C57 mice. Gross and Schwartz, * 222

Tissue culture studies with 2,6-diaminopurine and related substances. Biese, Berger, and Hitchings, * 204

Tobacco. See Smoking.

Transplantability of normal and neoplastic tissue, effect of low temperatures on. Blumenthal, Walsh, and Greiff, * 205

— of sarcoma 37, effect of low temperature on. Walsh, Greiff, and Blumenthal, 726

Transplantation, intra-ocular, of heterologous tissues. Morris, McDonald, and Mann, 36

Trichoma: tumor of hair anlage. Wallace and Halpert, * 246

Triethyleneimine-o-triazine. See Ethyleneimine derivatives.

Triphenyl tetrazolium chloride. See Tetrazolium salt.

2,4,6-Tris-(1-aziridyl)-s-triazine, effect on carcinoma, sarcoma, osteogenic sarcoma, lymphosarcoma, and melanoma in animals. Sugiura and Stock, * 244

Tryptophane, added in diet, effect on occurrence of 2-acetylaminofluorene-induced liver and bladder cancer in rats. Dunning, Curtis, and Maun, * 213, 454

See Frozen.
Tryptophane-acid reaction, application to serum of malignancy. Riegel and Beatty, 405

Tumor cells, effect of virus of Eastern equine encephalomyelitis on. Gei and Bang, 219

— homoioiotsplants, growth enhancement in mice following injections of homogenates and ultraffiltration sediments of mouse tissues. Kaliss, Jonas, and Avnet, 228

— lipid antigen, clinical evaluation of. Hall, Penn, Dowdy, and Bellamy, 223

— lipoids as antigens. Penn, 235

—, mouse, transplanteble, experiments with in relation to factors affecting number of tumor metastases. Zeidman, McCutcheon, and Coman, 337

— nitrogen, potential sources of. Sherman, Morton, and Mee, 157

— production by injection of fractions of mammalian tumors. Stansey, Cantarow, and Paschik, 175

— proteins, N-amino acid content of—review. Miller, 65

— tissue, citric acid content in vivo following injection of fluoroacetate—Potter and Bensch, 353

—, comparison with normal tissue with respect to factors affecting rate of anaerobic glycolysis. LePage, 77

— tissues, fungi associated with. Diller, 212

— transplantation across strain barriers, significance of the anterior chamber in. Eichwald, 214, 483

—, relative susceptibility of various organs to. de Long and Coman, 313

— transplants in cheek pouch of hamster, growth rate of. Lutz, Pult, Pant, and Handler, 231

Tumor-bearing rats, liver catalase of. Dunkle and Shanewise, 103

Tumor-damaging compounds, in vivo effects on enzymatic activities of sarcorn 37. Varadavek and Leiter, 247

Tumor-inhibiting agent produced by Aspergillus fumigatus—Reilly and Stock, 236

Tumorigenesis in intrasplenic and intraperitoneal ovarian grafts, influence of age of host and ovaries on. Li and Garmijn, 103

Tumors induced by intramuscular inoculation of cell-containing leukotic material, histogenis of. Pikow and Dolanski, 1

—, of parotid gland. Bauer and Byrne, 155

— in invertebrates—review. Scharrer and Lochhead, 403

— in rats treated with pituitary growth hormone. I. Pulmonary and lymphatic tissues. Moon, Simpson, Li, and Evans, 297

—. II. Adrenal glands. Moon, Simpson, Li, and Evans, 364

—. III. Reproductive organs. Moon, Simpson, Li, and Evans, 549

— malignant, in rats, produced with radioactive phosphorus. Koletsky, Bonte, and Friedell, 129

—, mammalian, fraction of, producing tumors when injected. Stansey, Cantarow, and Paschik, 175

—, mammatory, analogous, relative metabolism in vivo. I. Goldfedde, 89

—, mouse, explanted to chorioallantoic membrane of chick embryo, growth and histology of. Karnofsky, Patterson, and Rappe, 217

—. See Adenocarcinoma, Fibrosarcoma, Cancer, Adrenal, etc.

—, transplantable, growth affected by metabolite analogs. Greenberg, Irish, and Gal, 221

Urethah, effect on transplanted mouse leukemia. Geisse and Kirschbaum, 108

— mechanism of pulmonary tumor induction in mice with. Larsen, 230

Vascularization, growth of sarcoma 37 before and after. Chu, 210

Virus, Eastern equine encephalomyelitis, effect on normal and tumor cells studied in tissue culture and by electron microscopy. Gey and Bang, 210

— etiology of tumors, recent experiments with frozen and dried tissue as evidence for—review. Hirschberg and Rusch, 335

—, human influenza (type A), effect on incidence of lung tumors in mice. Steiner and Loosli, 242, 383

— infections, effect on neoplastic diseases. Bieman, Hammon, Eddie, Meyer, and Shumkin, 209

—, milk agent. See Milk agent virus.

—, Russian encephalitis, effect of infection with, on different types of transplantable tumors. Moore and Stock, 233

—, Shope, joint action with chemical carcinogen to induce cancer. Rous and Rogers, 238

Virus-induced papillomas of domestic rabbits, etiological study of cancers arising from. Rogers, Kidd, and Rous, 225

— papilloma-to-carcinoma sequence. I. Syvertson, Dascomb, Koomen, Wells, and Berry, 370

—, II. Syvertson, Dascomb, Wells, Koomen, and Berry, 440

— III. Syvertson, Wells, Koomen, Dascomb, and Berry, 474

Vitamin A, concentration in blood of cancer patients, effects of testosterone and estrogens on. Danish and Kloppe, 211

— analogs, effect on growth of transplantable tumors. Greenberg, Irish, and Gal, 221

—, Bis effect on proliferation of rabbit narrow cells in vivo. Bieseke and Berger, 606

Vitamins, changes during epidermal carcinogenesis—review. Carruthers, 255

—. See Pyridoxine, Riboflavin, etc.

Walker carcinoma 236, effect of 8-azaguanine on. Sugiuara, Hitchings, Cavalieri, and Stock, 178

— 3-bis (2-chloroethyl) amiomethyl-4-methoxy-methyl-5-hydroxy-6-methyl pyridine dihydrochloride, 2,4,6-triazine, 8-azaguanine on. Sugiuara, and Stock, 224

—, of cortisone and other steroids on. Sugiuara, Stock, Dobriner, and Rhoades, 244

—, of cystine on radiosensitivity of. Straube, Patt, Smith, and Tyree, 245

—, of hepabial and thymor on. Herbut, Knemer, and Jackson, 224

—, of protein depletion on host response to. Green, Benditt, and Humphreys, 789

—, role of cellular fractions in transplantation of. Tourtellotte and Storer, 785

—, serum polysaccharide levels in rats bearing. Shetlar, Erwin, and Everett, 445

Wilms' tumor. See Nephroblastosoma.

Xanthine oxidase, studies on, during carcinogenesis by 4-dimethyl-aminoazobenzene. Westerfeld, Richert, and Hilfinger, 486

Xanthopterin, effect on proliferation of rabbit narrow cells in vitro. Bieseke and Berger, 606

X-ray irradiation, local, effect upon development of various parts of young mouse. Brunst, Barnett, and Figge, 206

—, effects in vitro on agent of chicken tumor I (Rous sarcoma). Bryan, Lorenz, and Moloney, 207

—, stimulating effect on tail development of young axolotl. Brunst, Shremetmievka-Brunst, Barnett, and Figge, 206

X-rays, effect on frog carcinoma, studied by direct microscopic examination of intra-ocular transplants. Lucké and Schlumberger, 231

—, sensitivity of chromosomes to breakage by, and its relationship to nucleic acid cycle in dividing cells. Sparrow, Moses, and Steele, 242

—, synergistic action with estrogen in inducing thymic lymphosarcoma of mice. Kirschbaum, 229

—, use in determination of mitotic and intermitotic time of various mouse tissues. Knowlton and Widner, 59
INFORMATION FOR AUTHORS

Manuscripts for Cancer Research must represent new and original contributions, not previously published, and, if accepted, not to be published elsewhere. They should be typed, double-spaced, with ample margins on bond paper. The original and one carbon copy should be submitted. Manuscript pages should be numbered consecutively. Every paper should end with a brief, logical summary in which the points proved by the investigation are outlined.

Critical reviews on subjects dealing with cancer and allied fields will be considered for publication in Cancer Research. Such reviews should attempt to correlate the various approaches to a problem in a manner that will indicate the trends and emphasize the aspects that require further clarification. Critical analyses of the pertinent issues and expressions of opinions are encouraged. Preferably, the reviews should not exceed 7 pages (6,000 words) in length, including references.

Comments: A limited space will be available for the publication of comments on published data in the cancer field; they should not exceed 500 words. Comments written for the presentation of new data will not be published.

The title of the paper should be as short as is compatible with a clear indication of the subject matter. Chemical formulas should not be included in the title. The title of the paper, the name of the author (or authors), location, and any acknowledgments should appear on a separate page.

Footnotes should be numbered consecutively and should appear on a separate sheet.

Tables should be typed on separate sheets and should be numbered. Each must have a brief descriptive title. Tables should be arranged for vertical position on the page, either in single or double column. Every column must be supplied with an appropriate heading.

Illustrations: The preparation of photographs, charts, and graphs is particularly important, and authors are requested to follow very carefully the directions given below.

Half-tone illustrations (photomicrographs and photographs) are designated figures and are printed as plates at the end of each article. Figures in moderate numbers will be accepted if they are of good technical quality and essential for the clarity of the presentation. Plates in color and excessive numbers of figures, if accepted, will be charged to the author. Only clear glossy photographs should be submitted. Mount all photographs tightly together on white cardboard. Place as many together as will make a plate not to exceed 6 × 8½ inches. Mailing is facilitated if the size of the cardboard mount does not exceed 8½ × 11 inches.

Each figure should include the appropriate number on a lower corner, and they should be numbered consecutively starting with Figure 1. Legends for plate figures should be typed separately in consecutive order on standard-sized paper with the heading "Legend for Figures."

Line cut illustrations (graphs and charts) are designated charts and are printed in the text. These should be numbered in consecutive order starting with Chart 1. Charts should be planned so as to eliminate waste space; they should be ruled off close to the area of the curves, and descriptive matter should not extend beyond the curves. Charts should be so prepared that no letter or figure will be less than 2 mm. high after reduction to the size in which it will appear. Generally they will be reduced to fit either the one- (3-inch) or two- (6-inch) column width of the page. Original line drawings on high quality white drawing paper or board, blue tracing cloth, or coordinate paper printed in blue should be used. Typewritten charts are not desirable, as they permit but slight reduction. Only India ink should be used for drawing or lettering. One set is sufficient. Legends for each chart should be typed separately in consecutive order on standard-sized paper with the heading "Legend for Charts."

References should include, in order: author, title, journal abbreviation (Quarterly Cumulative Index Medicus form), volume number in arabic numerals, inclusive pages, and year. Book references should give: author, title, pages, edition number, city, publisher, and year. All references should be checked with the original publications and should be arranged in alphabetical order. Each number in the references is to refer to only one paper. References to unpublished work or personal communications should appear in footnotes. The following examples illustrate the desired style:

Changes in proof: Any but minor changes from the manuscript which are made in proof will be billed to the author.

Reprints may be ordered before publication, at cost, according to a schedule of prices accompanying the galley proof of the article.

Manuscripts, reviews, and correspondence related to contributions should be addressed to: Dr. HAROLD P. RUSCH, Editor, CANCER RESEARCH, McCord Memorial Laboratory, University of Wisconsin, Madison 6, Wisconsin.

INFORMATION FOR SUBSCRIBERS

All subscriptions and business inquiries should be addressed to the publishers, The UNIVERSITY OF CHICAGO PRESS, 5750 Ellis Avenue, Chicago 37, Illinois.
Not only does the Autotechnicon relieve the laboratory staff of the tedious task of processing tissues "by hand," but it also completes the chosen technique faster, more thoroughly, more uniformly, more dependably. The Autotechnicon is versatile...it fixes, dehydrates, washes, stains...delivers beautifully finished tissues ready for diagnosis.

And because it needs no human intervention, it knows no "working day." To-day's tissues, processed overnight by your own technique, will be waiting for you in the morning.
