Exakta "VX"
Camera

New Model With Pre-Set
Diaphragm Control

EXAKTA "VX"

35-mm. Single Lens Reflex Camera
For Parallax-Free Medical
Photography

The Exakta "VX," with both regular and telephoto lenses, is widely used in medical research. Its unique through-the-lens viewing system assures absolutely correct "on-the-subject" photographs at all times. In addition, this world-famous medical camera is regularly used for preliminary, developmental, and end result pictures of patients; and for making color transparencies for recording and lecturing.

OF SPECIAL INTEREST FOR THE CANCER SPECIALIST

Pathology in General Surgery

By PAUL W. SCHAFFER, M.D.

A new approach to surgical pathology, magnificently illustrated with 368 full-color plates and 127 typical x-rays.

"... highly recommended."—*Bulletin of Johns Hopkins Hospital.*

"... superbly illustrated."—*American Journal of Clinical Pathology.*

"Dr. Schaffer has gathered together in this text the finest collection of reproductions of gross and microscopic pathology to be published in one volume. Presented essentially for the clinician, the vivid illustrations portray disease processes with unmatched realism. The text is brief and lucid and essentially highlights the pathologic process brought out by the strikingly reproduced specimens . . . a gem to adorn every surgeon's library."—*Surgery.* \$20.00

**SMALL-GROUP STUDY
IN A NORMALLY LIT ROOM**

The image is cast upon a screen in the dark-chamber turret at table height. Each observer (up to 10) has a separate light-excluding viewing hood. The pathologist here is discussing a slide with the surgeon; the unused hoods are easily shuttered off.

**LARGE-GROUP EXHIBITION
IN THE DARKENED AUDITORIUM**

So intense is the Scopicon light source that images up to ten feet across can be projected. Through a system of auxiliary lenses the operator can follow a biological specimen through a progressive series of ever-closer localizations, up to ultimate demonstration under oil-immersed objectives.

2 or 10 or 1000

Quickly adaptable to viewing on any scale, the mobile Scopicon couples convenience with efficiency. Its high-pressure mercury arc is the brightest light source ever employed for microprojection. The focal spot is only 1mm square (approx.). Its pinpoint character permits flickerless projection of sharply detailed images up to ten feet across even under *oil-immersed microscope objectives*. Let us send you the brochure describing this remarkable instrument.
