Physiology and Biochemistry of the Skin
by
Stephen Rothman, M.D.

Dr. Rothman's research in the physiology and biochemistry of the skin from the dermatological point of view signaled a whole new approach to problems in the field. Now, he incorporates his findings into an over-all picture of the existing knowledge on the subject. The result is an absolutely essential, definitive reference work, and a stimulus to advanced research for years to come. Physiology and Biochemistry of the Skin is the only book which deals with all the physiological functions and biological processes of the skin. It is both important and unique.
