SUBJECT INDEX

AA sarcoma. See Sarcoma AA.
ACTH. See Adrenocorticotropic.
Acetaldehyde, formation of, by liver homogenates, with nitrogen mustard as substrate, but not with triethylene melamine. Trama and Nadkarni, 1069
Acetanilide, noncarcinogenic in rat. Miller, Sandin, Miller, and Rusch, 525
Acetate-1-C14, incorporation into liver and hepatoma slices, in mouse. Brown, Katz, and Chaikoff, 509
Acetate-5-C14, incorporation into liver and hepatoma slices, in mouse. Brown, Katz, and Chaikoff, 509
—, metabolism of, in vivo during hepatocarcinogenesis by p-dimethylaminobenzene. Medes, Friedmann, and Weinhouse, 57
Acetocetate, formation of in vivo from acetate-2-C14, in normal and tumorous liver. Medes, Friedmann, and Weinhouse, 57
2-Acetylaminobiphenyl, noncarcinogenic in rat. Miller, Sandin, Miller, and Rusch, 525
3-Acetylaminobiphenyl, noncarcinogenic in rat. Miller, Sandin, Miller, and Rusch, 525
4-Acetylaminobiphenyl, carcinogenic activity of, in rat. Miller, Sandin, Miller, and Rusch, 525
2-Acetylaminofluorene, carcinogenicity of aminobiphenyl and benzidine derivatives. Miller, Sandin, Miller, and Rusch, 525
—, effect on growth and liver composition of rats on low and adequate dietary sulfur. Gutmann, Fiblin, and Peters, 240
—, pathological changes in rat liver produced by feeding of. Farber, 142
4-Acetylamin-J-terphenyl, noncarcinogenic in rat. Miller, Sandin, Miller, and Rusch, 525
Acetylphenyloxotin oxipyr-idinium chloride, effect of various drugs on tumor-necrotizing activity of, in mice. Pradhan, Achinstein, and Shear, 1062
Acid hydrazides, inhibition of Sarcoma 180 growth by, in mice, alone and with B3-antagonists. Brockman, Thomson, Schabel, and Skipper, 788
Acid phosphatase, serum, copper-resistant, method and clinical values in health and disease. Reynolds, Lemon, and Byrnes, 943
Acridine orange, metachromatich differential fluorochroming of living and dead ascites tumor cells with. Vinegar, 900
Actinomycin D, effect on experimental ascetic tumors in mouse. Gregory, Pugh, Hata, and Thiel, 965
Adenosine-S-C14, incorporation into ascites cells in vivo. Greensleeves and LePage, 808
—, incorporation into pentosenucleic acid of human tumor transplants and into rat host tissues. Balis, Van Praag, and Assen, 628
—, utilisation in partially hepatectomised hamsters with and without human tumors. Balis, Van Praag, and Brown, 628
Adenocarcinoma, transplantable mammary, in mouse, effect of size on lung metastasis production. Martines, Miroff, and Bittner, 513
Adenocarcinoma 755, in mouse, concentrations of thiamine and coenzyme A in. Shils, Friedland, Fine, and Shapiro, 581
—, in mouse, effect of combination chemotherapy with ribovarin analog, 8-azaguanine, testosteron, and deoxycyclopyridoxine on. Shapiro, Dietrich, and Shils, 575
—, in mouse, effect of fluorocacetate and fluorocurate on citric acid concentration in. Dietrich and Shapiro, 585
Adenocarcinoma 15901a. See Carcinoma 15091a.
Adenocarcinoma CBEHA, blood lactic acid of mice bearing. Norman and Smith, 1087
—, in mice, effect of subcutaneous tumor on ascites tumor. goldie, Walker, Kelley, and Gaines, 553
—, transplanted mammary, mitotic stimulant of liver present in. Malingren, 282
—, used in attempt to establish actively acquired tolerance to tumors. Wallace, 348
Adenocarcinoma E 0771, effects of phosphorus-32 and cortisone on development of, in mice. Boucher, Syverton, and Bittner, 285

—, mouse, effect of fluorocacetate and fluorocitrinate on citric acid accumulation on homogenates of. Dietrich and Shapiro, 555

Adenocarcinoma Z 833, effects of phosphorus-32 and cortisone on development of, in mice. Boucher, Syverton, and Bittner, 52

Adenosine-5-monophosphate, effect on incorporation of glycine and orotic acid into Ehrlich ascites cells in vitro. Edmonds and LePage, 822

Adenosine monophosphate-C14, incorporation into ascites cells in vivo. Greenlees and LePage, 568

Adrenalecetomy, lack of effect on response of hepatic deethylasate and reductase systems to methylcholanthrene. Conney, Miller, and Miller, 450

Adrenal gland, hyperplasia of, and calcium metabolism in mice. Nerurker and Sahasrabudhe, 604

—, relation to induction of pituitary tumors in rodents. Gorbman, 99

—, tumor of, in hybrid mice. Dickie and Lane, 48

Adrenocorticotrophin, lack of effect on carcinogenesis in hypophysectomized rats. Moon, Li, and Simpson, 111

Adrenocorticosteroids, formation of, from glucose by various tumors. Kit, 70

—, in vivo biosynthesis of, from labeled glucose by various normal and tumor tissues. Kit and Graham, 117

American Association for Cancer Research, problems before. Andervont, 471

A-methopterin, inhibitor of mouse leukemia, with other agents. Morrison and Higgins, 929

Amitrin, inhibition of conversion of orotic acid to uridine nucleotides by. Stone and Potter, 1083

3-Amino-4-acylamino-biphenyl, noncarcinogenic in rat. Miller, Sandin, Millar, and Rusch, 525

Amino acids. See also specific amino acids.

—, free, effect of sarkomycin, nitroprusside, or crude podophyllin on, in ascites-cell tumors. Roberts, Tanaka, Tanaka, and Simonsen, 970

—, free, in growing and regressing ascites cell tumors. Roberts Tanaka, Tanaka, and Simonsen, 970

—, free, of Yoshida ascites tumor. Roberts and Tanaka, 904

—, in vivo biosynthesis of, from labeled glucose by various normal and tumor tissues. Kit and Graham, 117

—, sulfur, effects on tumor-host relationship in vivo. Hill, 753

—, requirements for, of Walker 256 carcinoma in tissue culture. McCoy, Maxwell, and Neuman, 979

—, sulfur, effect of vitamin B12 in ascites tumor. Hill, 753

3-Amino-4-dimethylamino-biphenyl, noncarcinogenic in rat. Miller, Sandin, Millar, and Rusch, 525

Aminofluoren, color reactions with montmorillonite, and carcinogenic activity. Finck, 921

Amphetamines, effect of various drugs on tumor-necrotizing activity of, in mice. Pradhan, Achinstein, and Shear, 1062

Antibiots, clinical tests of sarkomycin, in neoplastic diseases. Magill, Golby, Karnofsky, Burchenal, Stock, Rhoads, Crandall, Yorukoglu, and Gellhorn, 980

Antibiotics, effect of actinomycin D on experimental ascitic tumors in mouse. Gregory, Pugh, Hata, and Thilen, 963

—, against C3HBL leukemia E.L-4 after intensive immunisation of three mouse strains. Gorer and Amos, 388

—, and antigens, studies of normal and malignant tissue. Whitekay, Box, and Shulman, 831

—, and imununochemistry in cancer research. Review. Plescia, 743

—, anti-Ehrlich ascites tumor, action of, in mouse. Flax, 774

—, to transplantable tumors, effects in vivo and in vitro. Wissner, Barker, Flax, Lavia, and Talmage, 761

Antigenicity, of papilloma virus. Beard, 794

Antigens, human, lack of in human tumors grown in rats or hamsters. Korngold, 956

—, in relation to tumors. Eichwald, 918

Antiserum, against cell components of Ehrlich ascites tumor cells, cytotoxicity of. Horn, 695

—, of rabbit and rabbit against HeLa strain, cytotoxic for various human tissues. Miller and Hau, 306

Appendix, rabbit, uptake of glycerol-1-C14 by, in vitro. Kit and Graham, 537

Ascites tumors, effect of actinomycin D on, in mouse. Gregory, Pugh, Hata, and Thilen, 963

—, in mice, effects of subcutaneous tumors on. Goldie, Walker, Kelley, and Gains, 553

—, living and dead cells, metachromatic differential fluorochromation, with acridine orange. Vinegar, 900

Atmospheric pollution, role of, in lung cancer. Kotin, 375

Atropine, effect on tumor-necrotizing activity of several chemical agents in mice. Pradhan, Achinstein, and Shear, 1062

Autooxidation inhibitors, presence in intact cells of liver and hepatoma. Hirsch, 1076

8-Azaguazine, carcinostatic action against mouse tumors alone and in combination with deoxypridoxine, testosterone, and 6,7-dimethyl-9-hydroxyethylisoalloxazine. Shapiro, Dietrich, and Shils, 575

—, in vivo inhibition of xanthine dehydrogenase by. Feigelson and Davidson, 829

Azaserine, effect on in vivo metabolism of ascites tumor cells. Fernandes, LePage, and Lindner, 124

—, effect on purine biosynthesis in ascites cell tumors. Greenlees and LePage, 568

8-Azaaracil, antagonist of uracil, studied in various microbial systems. Handschumacher and Welch, 965

Bacteria, acquired drug resistance by. Law, 698

—, microbial studies of 8-azaaracil on growth inhibition of various strains of. Handschumacher and Welch, 965

Barbiturates, effect on tumor-necrotizing activity of several chemical agents in mice. Pradhan, Achinstein, and Shear, 1062

1,2-Benzenethracene-9,10-C14, binding to skin proteins of mice of. Heidelberger and Moldenhauer, 446

3,4-Benzpyrene, isolated from air of Leningrad. Shimkin and Shope, 915

—, metabolic products from mouse skin after painting with. Tarbell, Brooker, Seifert, Vanterpool, Claus, and Conway, 197

3,4-Benzpyrene-5-C14, binding to skin proteins of mice of. Heidelberger and Moldenhauer, 446

2-Benzylmercapto-4-amino-6-carbethoxy-pyrimidine, inhibition of conversion of orotic acid to uridine nucleotides by. Stone and Potter, 1083

2-Benzylmercapto-4-amino-6-hydroxymethylpyrimidine, inhibition of conversion of orotic acid to uridine nucleotides by. Stone and Potter, 1083

Betaine, dietary, lack of effect on resistance to lymphoid tumor transplantation in chick. Hill and Garren, 1019

Biochemical characteristics, in cancer tissue. Potter, 666

—, of morphologically separable cancers, review. Weinhouse, 654

—, of morphologically separable cancers, review. Greenstein, 641

—, of morphologically separable cancers, summary of discussion. Cohen, 668

Biosynthesis, of amino acids in vitro, from labeled glucose by various normal and tumor tissues. Kit and Graham, 117

Blood, comparison of phosphohexose isomerase and lactic dehydrogenase activities in plasma of tumor-bearing rats. Bodansky and Scholler, 894

—, glutamic acid dehydrogenase and glutamic-oxaloacetic transaminase levels in normal, leukemic, and cancerous patients. Weisman, Monder, and Williams, 344

—, hematological changes accompanying tumor growth in hamster cheek pouch. Sherman and Patt, 394
Blood—Continued

• hemoglobin, relation to verdpersoxidase activity in rat bone, Schulz, Turtel, Shay, and Greenstein, 869
• lactic acid in, of tumor-bearing and tumor-free mice. Norman and Smith, 1027
— lactic dehydrogenase activity in, Hill, 480
— fatty acids and alkaline phosphatase in tumor-bearing rats. Frederick and Begg, 548
— survival of chromium-51-labeled erythrocytes in tumor-bearing rabbits. Ultmann, Fish, and Hyman, 855

Blood groups, natural heteroagglutinins for human red cells in rat serum. Aptekman and Bogden, 518

Bone marrow cells, effect of injection on incidence of implant lymphomas. Kaplan, Brown, Hirsch, and Carnes, 426
— of, rat growth and continued function of, in x-irradiated mice. Nowell, Cole, Habermeier, and Roan, 288

Bone marrow particles, human, in malignancy, nucleic acid analysis of. Loeb, White, and Hall, 413

Brain, cell-free filtrates of, used to accelerate leukemia development in mice. Schwartz, Schoonman, and Saneto, 559
— mouse, concentrations of riboflavin, flavin adenine dinitucleotide, and flavin mononucleotide in. Shapiro, Dietrich, and Shils, 372
— mouse, concentrations of thiamine and coenzyme A in. Shibli, Friedland, Fine, and Shapiro, 881
— mouse, effect of fluorocacetate and fluorocitrate on citric acid concentration in. Dietrich and Shapiro, 385
— rat, metabolic pattern for pyruvate-C-14 with slices of. Busch, Goldberg, and Anderson, 175

6-Bromo-orotic acid, inhibition of conversion of orotic acid to uridine nucleotides by. Stone and Potter, 1038

Brown-Pearce rabbit carcinoma, survival of chromium-51-labeled erythrocytes in rabbits with. Ultmann, Fish, and Hyman, 855

Cancer, biochemical characteristis of. Greenstein, 641
— biochemical characteristics of. Weinhouse, 654
— biochemical characteristis of, summar of discussion. Weinhouse, 655
— biochemical uniformity and heterogeneity in. Potter, 658
— control of, in man, by endocrinologic methods: a review. Huggins, 925
— discussion of drug resistance and therapeutic responses. Rhoads, 722
— discussion of drug resistance and therapeutic responses. Skipper, 717
— discussion of problem of. Schults, 790
— early, guest editorial. Steiner, 277
— human, levels of glutamic acid dehydrogenase and glutamate-oxalate transaminase in blood. Waismann, Mondaer, and Williams, 344
— lung, comment on guest editorial on. Graham, 516
— lung, comment on guest editorial on. Little, 817
— lung, role of atmospheric pollution in. Kotin, 375
— quackery, guest editorial. Rhoads, 575
— treatment of, radioactive isotopes and nuclear radiations in. Lawrence and Tobias, 185

Cancer research, history of. Clove, 3
— Japan, guest editorial. Yoshida, 1007
— in Soviet Union, guest editorial. Shimkin and Shtepe, 915
— in United Kingdom, guest editorial. Haddow, 821

Cancers, differences between, in terms of etiologic factors. Bernheim, 675
— terms of etiologic factors. Steiner, 681
— terms of evolution of drug resistance. Law, 698
— terms of therapeutic responses. Karnofsky, 684

Cantharidin, inhibition by, of protein binding of benspyrene and 1,2,3,5,6-dibenzanthracene to skin. Heidelberger and Moldenhauer, 442

N-carbethoxy-δ-asparginyn, inhibition of conversion of orotic acid to uridine nucleotides by. Stone and Potter, 1038

Carcinogenesis, amino acid metabolism in perfused livers of azo dye-fed rats. Burke and Miller, 380
— by crude and purified preparations of tumor-inducing factor from Drosophila. Friedman and Burton, 1058
— by radioactive substances. Furth and Tullis, 5
— chemical, as a chronic toxicity test. review. Shaubik and Sicé, 795
— differences between cancers in terms of etiologic factors. Bernheim, 675
— differences between cancers in terms of etiologic factors. Steiner, 681
— effect of subcutaneous imbedding of metals in rodents. Oppenheimer, Orenshof, and Stout, 489
— environmental agents in atmosphere. Kotin, 375
— in, duck, in skin without follicles, by methylcholan-threne. Rigdon, 904
— in mouse skin, effect of cortisone on paintings with methylcholanthrene. Spain, Molonut, and Novikoff, 188
— in parakeet, induced in skin by methylcholanthrene. Schlimberger, 1048
— in skin of monkey, by high-boiling catalytically cracked oil. Sugira, Smith, and Sunderland, 991
— produced by azo dyes, levels of diphosphopyridine nucleotide in livers in rats during. Jeddink, Thomas, and Weinhaus, 967
— protein binding of 9,10-dimethyl-1,2-benzanthracene-9,10-C-14 to mouse skin. Darchun and Hadler, 816
— relation of high fat diet to tumors in rat. Benson, Lev, and Grand, 133
— with 9,10-dimethyl-1,2-benzanthracene, effect of pituitary hormones on, in hypophysectomised rats. Mool, and Simpson, 111
— with hydrocarbons, binding to skin proteins. Heidelberger and Moldenhauer, 442

Carcinogenicity of aminofluorenes, color reactions with montmorillonite. Pinck, 921
— of compounds related to 3-acetylaminofluorene; amino-phenyl and benzidine derivatives. Miller, Sandlin, Miller, and Rusch, 525

Carcinoma 18001A, growth of, in uteri and other sites of mice. Homburger, Tregier, and Grossman, 106

Carcinoma C148, mouse, effect of fluorocacetate and fluorocitrate on citric acid accumulation in homogenates of. Dietrich and Shapiro, 885

Carcinoma C3HBA. See Adenocarcinoma C3HBA.

Carcinoma E 0771. See Adenocarcinoma E 0771.

Carcinoma RC, mouse, effect of fluorocacetate and fluorocitrate on citric acid accumulation in homogenates of. Dietrich and Shapiro, 885

Castration, effect on growth of rodent tumors in uiteri and other sites. Homburger, Tregier, and Grossman, 106
— effect on growth of spontaneous, transplantable ovarian tumors in rats. Igelisias and Markanto, 725
— effect on steds of mouse skin. Kandutsch, Murphy, and Dredfelsch, 83
— induction of pituitary tumors in rodents. Gormban, 99
— of mice, effect on lymphoid tumor incidence with and without estrogen treatment. Tock, Hirsch, Brown, Nagareda, and Kaplan, 890

Cell fractionation, for determination of activity of verdpersoxidase in experimental chilomor in rat. Schulz, Turtel, Shay, and Greenstein, 869
— of, rat liver tumors. Petermann, Miesen, and Hamilton, 690

Cell-free filtrates of, brain, used to accelerate development of lymphomas in mice. Schwartz, Schoolman, and Saneto, 559

Characteristics, biochemical, of morphologically separable cancers, discussion. Weinhouse, 654
— of morphologically separable cancers, review. Greenstein, 641
Chemotherapy, clinical experiences with sarkomycin in neoplastic diseases. Magill, Golbey, Karnofsky, Burchenal, Stock, Rhoads, Crandall, Yorukoglu, and Gelhorn, 990

Combust, on a paper on electronic structure and carcinogenic activity of aromatic molecules. Fullman and Pullman, 597

Comeston, as a chronic toxicity test. review. Shubik and Sicé, 728

Cosynzyme A, concentration of, in normal and tumorsous mouse tissues. Shils, Friedland, Fine, and Shapiro, 581

Crocker Sarcoma 180. See Sarcoma 180.

Croton oil, in induction of skin tumors, used with 9,10-dimethyl-1,2-benzanthracene. Klein, 123

Crotos, effect on heterotransplantation of human cancers. Handler, Davis, and Sommers, 32

Crozard, effect on tumors in mice. Pradhan, Achinstein, and Shear, 1062

Cyanide, inhibition of growth of Sarcoma 180 by combinations of B, antagonists and acid hydrasides, in mice. Brockman, Thomson, Schabel, and Skipper, 788

Cytidine-C, utilization of, for DNA synthesis in vivo in regenerating rat liver. Hoch and Potter, 400

Cytolysis, inhibition of in tumor-host relationship in rat. Hill, 793

Cytotoxicity, of various antiseras prepared against Ehrlich ascites tumor cell components. Horn, 595

Daraprim, effect on in vivo metabolism of ascites tumor cells and spleen. Fernandes, LePage, and Lindner, 154

D-Cholesteral, concentration of, in mouse skin. Kandutsch, Murphy, and Dreisbach, 68

Deoxygenricher, tumor, in normal and tumor-bearing rats. Boyd and Crandall, 198

Deoxygenyridine, carinoestatic action against mouse tumors in combination with 8-aza-, testosteron, and 6,7-dimethyl-8-hydroxyethyl-2-isoalloxazine. Shapiro, Dietrich, and Shils, 575

Deoxygenyridine hydroporphide, inhibition of growth of Sarcoma 180 in mice on B-deficient diet by, alone and with acid hydrasides. Brockman, Thomson, Schabel, and Skipper, 788

Deoxygenyridine phosphate, inhibition of growth of Sarcoma 180 in mice on B-deficient diet by, alone and with acid hydrasides. Brockman, Thomson, Schabel, and Skipper, 788

Deoxyribonucleic acid. See also Nucleic acids.

D-l-alpha-tocopherol, in tumors. Shubik and Sicé, 728

D-L-methylcho-
pentosenucleic acid in normal and tumorbearing rats. Balis, Van Prag, and Azen, 638
utilization in partially hepatectomized hamsters with and without human tumors. Balis, Van Prag, and Brown, 632
5-Di-a-oroic acid, inhibition of conversion of orotic acid to uridine nucleotides by Stone and Potter, 1038
5-Diaa-uracil, inhibition of conversion of orotic acid to uridine nucleotides by Stone and Potter, 1038
Dibenzazine, effect on tumor-necrotizing activity of several chemical agents in mice. Pradhan, Aachinstein, and Shear, 1002
1,3,4,5,6-Dibenzanthracene-9,10-C14, binding to skin proteins of mice of. Heidelberger and Moldenhauer, 442
1,3,4,5,6-Dibenzanthracene-9,10-C14, binding to skin proteins of mice of. Heidelberger and Moldenhauer, 442
1,2,5,6-Dibenzanthracene-9,10-Ch14, effect on hepatic demethylase activity in rat. Conney, Miller, and Miller, 450
1,2,5,6-Dibenzanthracene-9,10-choline, effect on hepatic demethylase activity in rat. Conney, Miller, and Miller, 450
Dibenzyline, effect on tumor-necrotizing activity of several chemical agents in mice. Pradhan, Aachinstein, and Shear, 1002
Dist, deficient in B-antagonists and acid hydrazides, in mice. Brockman, Thomas, Schabel, and Skiper, 788
effect of choline, betaine, inositol, or methionine on resistance to lymphoid tumor transplantation in chick. Hill and Garren, 1009
effect of fasting on levels of diprophosphoryidine nucleotide in rats. Jedeikin, Thomas, and Weinhouse, 867
effect of force-feeding on lipemia in tumor-bearing rats. Frederick and Begg, 548
effect of high-fat, on tumor incidence in female rats. Davis, Stevenson, and Busch, 194
effect of overfeeding on body and tumor weights in rats. Ingle, Altamero, and Flores, 437
effect of reduced food consumption in hypophysectomized rats on change in ethanolamine output. Wilcox and Luck, 926
effect of sulfur amino acids on tumor-host relationship in rat. Hilf, 753
effect of tumor on mammary fibroadenoma in rat. Benson, Lev, and Grand, 184
low and adequate in sulfur, in relation to action of 2-acetylaminofluorene on growth and liver composition of rats. Gutmann, Filbin, and Peters, 440
low-protein-choline, producing experimental cirrhosis in study of amino acid metabolism in perfused rat livers. Burke and Miller, 580
Diethylstilbestrol, effect on acid and alkaline phosphatase and 2-glucone activities of pituitary, liver, and kidney of rats. Melchior and Micuta, 630
3,4-Dimethylcetanalide, noncarcinogenic in rat. Miller, Sandin, Miller, and Rusch, 926
4-(or 5)-Dimethylaminobenzene, fatty acid metabolism in rats during hepatocarcinogenesis by. Medes, Friedman, and Weinhouse, 87
levels of diprophosphoryidine nucleotide in livers of rats fed Jedeikin, Thomas, and Weinhouse, 867
nucleoproteins of rat liver tumors induced by. Petermann, Mizen, and Hamilton, 691
2',5'-Dibenzanthracene-9-C14, binding to skin proteins of mice of. Heidelberger and Moldenhauer, 442
9,10-Dimethyl-1,2-benzanthracene, effect of pituitary hormones on carcinogenesis with, in hypophysectomized rats. Moch, Li, and Simpsoon, 111
effect on egg embryos immersed in solutions of. Green and Herdeck, 1009
in induction of melanotic tumors in hamster, transplantation and characteristics of tumor. Shubik, Della Porta, Rapaport, and Speper, 1051
in induction of skin tumors in mouse with minute doses of. Klein, 123
relation of tumor growth induced by, and experimental neurosis in rats. Shimkin and Shope, 915
9,10-Dimethyl-1,2-benzanthracene-9,10-C14, binding to skin proteins of mice of. Heidelberger and Moldenhauer, 442
mellitic and carcinogenic studies with, in mouse. Darchun and Hadler, 316
2',5'-Dimethyl-N,N'-diacetylbenzidine, noncarcinogenic in rat. Miller, Sandin, Miller, and Rusch, 525
3,5'-Dimethyl-N,N'-diacetylbenzidine, weak carcinogenic activity of, in rat. Miller, Sandin, Miller, and Rusch, 545
7,8-Dimethyl-3-hydroxy-3-isosobenzoxazone, carcinostatic action against mouse tumors alone and in combination with 8-azaguanine, testosteron, and deoxypyridoxine. Shapiro, Dietrich, and Shila, 375
Diprophosphoryidine nucleotide, levels in normal, presenoplastic, and neoplastic livers induced by nox dyes. Jedeikin, Thomas, and Weinhouse, 687
Dip, inhibition of oxidation of, by intact cells of mouse tissues. Hirsch, 1078
Drosophila melanogaster, activity of tumor factor in development of. Burton, Holley, and Kopac, 479
purification of inherited tumor-inducing factor in. Burton, Friedman, and Mitchell, 880
tumor-inducing factor from tue larvae injected into wild 51-58 strain, effects of crude and purified preparations. Friedman and Burton, 1039
Duck, tumors induced in skin without follicles by methy1 cholanthrene. Ridgon, 804
Ehrlich ascites tumor, action of antibody against. Flax, 774
amino acid biosynthesis from labeled glucose by. Kit and Graham, 117
cytotoxicity of various antisera prepared against cell components of. Horn, 865
effect of antibodies labeled with 131I against, in vivo and in vitro. Wissler, Barker, Flax, LaVia, and Talmage, 761
effect of asparagin and 6-mercaptopurine on in vivo metabolism of. Fernandes, LePage, and Lindner, 154
effect of injections of serological agents on survival of mice bearing. Flax, 774
effect of low temperature and storage on viability and mouse strain specificity of cells of. Morgan, Querin, and Morton, 907
effect of sarkomycin on, in mice. Roberts, Tanaka, Tanaka, and Simonsen, 970
growth rate of, with graduated loading of reticuloendothelium. Baillif, 478
inhibition of respiration by glucose, fructose, and man- nase in vitro. Brin and McKee, 864
purine biosynthesis and inhibitors in. Greenlees and LePage, 808
purine metabolism in vitro. Edmunds and LePage, 222
serum lactacid dehydrogenase in mice with. Hill, 460
Electronic structure, and carcinogenic activity of aromatic molecules. Pullman and Pullman, 967
Electrophoresis, mobility of lymphosarcoma cells in presence of normal and post-tumor-regression mouse serum. Hartman and Nungester, 617
Enhancement, of mouse skin tumors by methylcholanthrene, with cortisone. Spain, Moldan, and Novikoff, 188
tumor growth in mice, by phosphorus-32 and/or cortisone. Boucher, Syvertov, and Bittner, 22
Enzymes, comparison of phosphochose isomerase and lactidehydrogenase activities in plasma, liver, and tumor of tumor-bearing rats. Bodansky and Scholler, 904
copper-resistant serum acid phosphatase, method and clinical values. Reynolds, Lemon, and Byrnes, 943
patterns in tumor tissue, uniformity and diversity in. Potter, 658
tryptophan peroxidase level in liver of normal, tumor-bearing, and growth-hormone-treated mice. Wood, Rivlin, and Knox, 1058
Erythrocytes, labeled with chromium-51, survival studies in tumor-bearing rabbits. Ultmann, Fish, and Hyman, 885

Escherichia coli, acquired drug resistance by. Law, 686

Estradiol, effect of subcutaneous pellets of, on growth of ovarian tumor in castrated rats. Iglesias and Mardones, 756

Estradiol, effect on growth of tumors in uteri and other sites of castrate rodents. Homburger, Tregler, and Grossman, 106

Estrogen, administration of, in induction of pituitary tumors in rodents. Gorbman, 99

Estrogen, effect on mammatropic pituitary tumors in mice. Furth, Gadeken, Clifton, and Anderson, 600

Estrogen, effects of massive doses on acid and alkaline phosphatase and 2-glucuronidase activities of pituitary, liver, and kidney of rats. Melchior and Micuta, 299

Estrogen, lack of effect of growth of ovarian tumor transplanted into hosts treated with. in mouse. Green, 417

Estrogen, lack of effect on skin sterols of castrated mice. Kandutsch, Murphy, and Dreisbach, 63

Fibrosarcoma, lymphoid tumor incidence in mice treated with x-ray and. Toch, Hirsch, Brown, Nagareda, and Kaplan, 890

Ethanolamines, output of, in rat, effect of hepatoma and hypophysectomy on. Wilcox and Luck, 926

Ethionine, inhibition of response of demethylase and reductase systems of rat liver to methylcholanthrene by. Conney, Miller, and Miller, 450

Ethionine, inhibitor of mouse leukemia, with other agents. Morrison and Higges, 299

Ethionine, lack of pathological changes in rat liver produced by feeding of. Parber, 142

2-Ethoxy-4-amino-5-carbethoxy pyrimidine, inhibition of conversion of orotic acid to uridine nucleotides by. Stone and Potter, 1083

2-Ethynylmercapto-4-amino-5-carbethoxy pyrimidine, inhibition of conversion of orotic acid to uridine nucleotides by. Stone and Potter, 1083

2-Ethynylmercapto-4-amino-5-chloromethyl pyrimidine, inhibition of conversion of orotic acid to uridine nucleotides by. Stone, Potter, and Potter, 1083

Biology, of cancers, differences between. Berenblum, 675

—, of cancers, differences between. Steiner, 681

Eye, transplantation of tumor tissue into anterior chamber, uptake of by. Thomas, Bovington, and Krohmer, 796

"Fall-out" problems, in relation to carcinogenesis. Furth and Tullis, 5

Fasting, effect on levels of dipophosphorydine nucleotide in rat tissues. Jedeikin, Thomas, and Weinhouse, 887

Fat, neutral, levels in five organs of rats bearing Walker 256 carcinosarcoma. Boyd, Kelly, Murdoch, and Boyd, 335

Fatty acid, formation of, in vitro from acetate-14C, in normal and tumorous liver. Medes, Friedmann, and Weinhouse, 87

Fern prothallus, deoxyribonucleic acid in normal and tumorous growth of. Partanen, 300

Fibroadenoma, mammary, relation to high fat diet in rat. Benson, Lev, and Grand, 135

Fibroma, occurrence in salmon. Schlumberger and Katz, 949

Fibroma, transplantable, in rat, producing syndrome of multiple telangiectases. Selye and Richer, 856

Fish, occurrence of odontogenic tumors in salmon. Schlumberger and Katz, 369

Flavins adenine dinucleotide, measured in normal and tumor tissues of mice. Shapiro, Diethrich, and Shils, 575

Flavins mononucleotide, measured in normal and tumor tissues of mouse. Shapiro, Diethrich, and Shils, 575

Fleischer-Jobling carcinoma, rat, effect of antibodies labeled with 14C against, in vivo and in vitro. Wissler, Barker, Flax, Potter, and Talmage, 761

—, rat, immediate passage of tumor cell emboli of, through liver and kidney. Zeidman, Gamble, and Clevis, 814

Fluoride, effect on oxidation of glucose by various tissues. Kit, 70

Fluorocarboxate. See also Monofluorocarboxate

—, carcinostatic activity against mouse tumor. Dietrich and Shapiro, 835

2'-Fluoro-4-acetylamidobiphenyl, noncarcinogenic in rat. Miller, Sandin, Miller, and Rusch, 525

—, synthesis of. Miller, Sandin, Miller, and Rusch, 525

4'-Fluoro-4-acetylamidobiphenyl, carcinogenic activity of, in rat. Miller, Sandin, Miller, and Rusch, 525

Fluorobiphenyl, noncarcinogenic in rat. Miller, Sandin, Miller, and Rusch, 525

Fluorochroming, metachromatic differential, of living and dead ascites tumors cells with acidine orange. Vinegar, 900

Fluorocitrates. See also Monofluorocitrates

—, carcinostatic activity against mouse tumor. Dietrich and Shapiro, 835

Formamide, possible inhibitor of mouse leukemia, with other agents. Morrison and Higgins, 292

Foster-nursing. See also Milk-nursing

Foster-nursing, carcinogenic effect of, in mouse mammary tumor in vivo. Brin and McKee, 376

Gardner lymphosarcoma. See Lymphosarcoma GC3HED Gardner

Genetic adaptation, in relation to acquired drug resistance by. E. coli. Law, 686

Genetics, effect of genetic constitution of mice on mammary cancer following administration of mammary tumor agent. Bittner, 1039

—, evidence of origin of lymphoma tumor cells from thymic grafts, by use of hybrids. Kaplan, Hirsch, and Brown, 434

—, polyploidy in tail epithelium of frog embryos immersed in solutions of 9,10-dimethyl-1,2-benzanthracene. Green and Herdeck, 1009

Fructose, inhibition of respiration by, in Ehrlich ascites tumor in vivo. Brin and McKee, 376

Glioblastoma, rat, uptake of by. Thomas, Boenington, and Krohmer, 796

Gliomas, mouse, effect of fluorocarboxate and fluorocitrate on citric acid accumulation in homogenates of. Dietrich and Shapiro, 835

Glutamates, effect on Ehrlich ascites tumor cells in vivo. Flax, 774

—, labeled with 14C, localization of antitumor antibody in tumor and in liver. Wissler, Parker, Flax, LaVio, and Talmage, 761

Glucose, alone or with glutamate, effect on metabolic patterns of pyruvate-2-C14 in rat tissue slices. Buech, Goldberg, and Anderson, 175

—, effect of administration of, on blood lactate acid level of tumor-bearing and tumor-free mice. Norman and Smith, 1067

—, inhibition of respiration by, in mouse Ehrlich ascites tumor in vivo. Brin and McKee, 364

—, uniformly labeled, incorporation into liver and hepatoma slices, in mouse. Brown, Katz, and Chaikoff, 309

—, uniformly labeled, in vivo biosynthesis of amino acids from, by various normal and tumor tissues. Kit and Graham, 117

—, uniformly labeled, oxidation of, by various tumors. Kit, 70

—, utilization by Ehrlich ascites tumor cells in presence of γ-globulin, complement. Flax, 774
Hepatoma, in growing rat, nucleic acid metabolism after. Hecht, Hecht, and Poter, 994
—, in rat, intermediates in synthesis of DNA pyrimidine nucleotides in liver after. Hecht and Poter, 999
—, in rat, rate of deoxyribonucleic acid synthesis in vivo in liver after. Hecht and Poter, 998
—, partial, effect on respiratory metabolism. Perkinson and Irving, 498
—, partial, and hamsters, effect on nucleic acid metabolism in normal and tumor-bearing hamsters. Balis, Van Praag, and Brown, 632
Hepatoma, induced by azo dyes in rat, nucleoproteins of. Petermann, Misen, and Hamilton, 930
—, produced in mice by radioactive colloidal gold. Upton, Furth, and Burnett, 111
—, rat, effect on ethanalamine output. Wilcox and Luck, 926
Hepatoma 98/15, blood lactic acid of mice bearing. Norman and Smith, 1027
Hepatoma CMI, oxidative metabolic pattern of, in mouse. Brown, Kats, and Chaitoff, 400
Heptaldehyde, inhibition by, of protein binding of benspyrene and 1,2,6,6-dibenzanthracene to skin. Heidelberger and Moldenhauer, 442
Hesperidin methylchalcone, effect on growth of sarcoma homografts in rats. Scott and Daniels, 794
Hexose monophosphate shunt, role of, in tumors and lymphatic tissues. Kit, 70
Histamine, effect of various drugs on tumor-necrotizing activity of, in mice. Pradhan, Achinstein, and Shear, 1092
HNL2. See Methylene-(3-chlo-roethyl)amine.
Human, bone marrow particles in malignancy, nucleic acid analysis of. Loeb, Wright, and Hall, 413
—, cancer of, by endocrinologic methods, a review. Huggins, 825
—, distribution of tissue antigens in human tumors grown in rats or hamsters. Korngold, 956
—, heterologous transplantation of tumors, into rats. Herbst and Kraemer, 406
—, leukemia and cancer, levels of glutamic acid, dehydrogenase and glutamic-oxalacetic transaminase in blood. Waisman, Monder, and Williams, 944
—, method and values for copper-resistant serum acid phosphatase in health and disease. Reynolds, Lemon, and Byrne, 948
—, radioactive isotopes and nuclear radiations in treatment of cancer. Lawrence and Tobias, 185
—, responses of cancers to therapeutic agents. Karnofsky, 684
—, serum lactic dehydrogenase, some properties of. Hill, 460
—, therapeutic tests of sarcoma, in neoplastic diseases. Magill, Golbey, Karnofsky, Burchenal, Stock, Rhodes, Crandall, Yorukoglu, and Gelhorn, 960
—, transplantation of cancers, of, in hamster cheek pouch. Handler, Davis, and Sommers, 82
—, tumors transplanted into guinea pig eyes, uptake of ³¹P by. Thomas, Bovington, and Krohmer, 796
Human carcinoma, H-11 strain, action of cytotoxic antisera on. Miller and Hsu, 306
Human carcinoma H-125, of colon, transplanted in rats, effect of syngnain on. Herbst and Kraemer, 1048
Human diploid cell ras, rhabdomyosarcoma 1, distribution of human tissue antigens in, grown in rats. Korngold, 956
—, growth of, in chick embryo and hatched chick. Dagg, Karnofsky, and Roddy, 589
—, influence of regenerating liver on purine metabolism in hamsters bearing. Balis, Van Praag, and Brown, 633
—, nucleic acid purine metabolism in heterologous implants of. Bennett, Skipper, Tooian, and Rhoads, 262
Human sarcoma H-3, distribution of human tissue antigens in, grown in rats. Korngold, 956
—, growth of, in chick embryo and hatched chick. Dagg, Karnofsky, and Roddy, 589
—, influence of regenerating liver on purine metabolism in hamsters bearing. Balis, Van Praag, and Brown, 632
—, nucleic acid purine metabolism in heterologous implants of. Bennett, Skipper, Tooian, and Rhoads, 262
—, pentose nucleic acid synthesis by, in tumor-bearing rats. Balis, Van Praag, and Aesen, 628
Hydrocarbon-protein conjugates, effects on frog embryos, induction and persistence of polyplody in tail epithelium. Green and Herdeek, 1009
Hydrocarbons, aliphatic and aromatic, effect on skin steroids. Brooks and Baumann, 567
—, polycyclic, effect on hepatic demethylase system. Conney, Miller, and Miller, 548
3-Hydroxy-4-ace tylaminobipheryl, synthesis of. Miller, Sandin, Miller, and Rusch, 525
3-Hydroxy-4-a minobipheryl, noncarcinogenic in rat. Miller, Sandin, Miller, and Rusch, 525
—, synthesis of. Miller, Sandin, Miller, and Rusch, 525
Hyperlipemia, in the tumor-bearing rat as a result of force-feeding or high-fat diet. Frederick and Begg, 548
—, relation to tumorigenesis, in rat. Benson, Lev, and Grand, 185
Hypophysectomy, effect of pituitary hormones on carcinogenesis with 9,10-dimethyl-1,2-benzanthracene after. Moon, Li, and Simpson, 111
—, effect on ethanalamine output in rat, relation to reduced food consumption. Wilcox and Luck, 926
—, effect on lipoemia and fatty acids in normal and tumor-bearing rats. Frederick and Begg, 548
—, lack of effect on reverse of hepatic demethylase and reductase systems to methylcholanthrene. Conney, Miller, and Miller, 490
Hypoxanthine-S-C⁴, incorporation into adenine and guanine of pentose nucleic acid in normal and tumor-bearing rats. Balis, Van Praag, and Aesen, 628
—, utilization in partially hepatotomized hamsters with and without human tumors. Balis, Van Praag, and Brown, 632
Immunity, passive, in mice against C57BL leukemia E.L.4 by means of iso-immune serum. Gorer and Amos, 338
Immunohematology, action of anti-Ehrlich ascites tumor antibody. Fox, 774
—, effects of antitumor antibodies labeled with ¹¹¹I in vitro and in vivo. Wissler, Barker, Fox, Lavois, and Talmage, 701
—, in cancer research, review. Plessis, 745
Immunology, distribution of human tissue antigens in five human tumors grown in rats or hamsters. Korngold, 956
—, hemagglutinins in normal and tumor-bearing rats. Aptekman and Bogden, 216
—, relation to cancer. Eichwald, 918
—, studies of normal and malignant tissue antigens. Witebsky, A., and Shulman, 831
Inositol, dietary, lack of effect on resistance to lymphoid tumor transplantation in chick. Hill and Garrett, 1019
Inulin, effect on blood lipids of normal and tumor-bearing rats. Frederick and Begg, 548
International Union against Cancer, report, 269
Intestine, incorporation of adenine and guanosine into pentose nucleic acid of, in rats bearing human tumors. Balis, Van Praag, and Aesen, 628
—, induction of carcinomas of, in mouse, by whole-body fast-neutron irradiation. Nowell, Cole, and Ellis, 873
Intestine—Continued

—, small, mouse, concentrations of thiamine and coenzyme A in Shils, Friedland, Fine, and Shapiro, 581

Iodine-131, antibodies labeled with, prepared against transplantable tumors. Wissler, Barker, Flax, LaVis, and Talmage, 761
—, in induction of pituitary tumors in rodents. Gorbman, 99
—, metabolism of relationship to tumor growth and regres- sion. Scott and Daniels, 784
—, tumors caused by. Furth and Tullis, 5

Irradiation, effect on heterologous transplantation of human carcinoma in rats, compared with effect of xymosan. Herbut and Kraemer, 1045
—, of mice, for indirect induction of lymphomas in nonirradi- ated thymic grafts. Kaplan, Carnes, Brown, and Hirsch, 422
—, of mice, for lymphoma induction. Kaplan, Hirsch, and Brown, 384
—, of mice, role of thymic grafts in lymphoma induction after. Carnes, Kaplan, Brown, and Hirsch, 429
—, of thymectomized mice, effect on incidence of lymphomas in thymic grafts. Kaplan, Carnes, Hirsch, and Carnes, 428
—, of weanling rats treated with cortisone, for heterologous transplantation of human tumors. Herbut and Kraemer, 408
—, total-body, in induction of mammmotropic pituitary tumors in mice. Furth, Gaddes, Clifton, and Anderson, 600
—, whole-body fast-neutron. In induction of intestinal carcinoma in mouse. Nowell, Cole, and Ellis, 873

Isotopes, radioactive, in treatment of cancer. Lawrence and Tobias, 185

Japan, cancer research in, guest editorial. Yoshida, 1007

Jensen sarcoma, metabolic pattern for pyruvate-2-C14 with slices of. Busch, Goldberg, and Anderson, 175
—, rat, effect of antibodies labeled with 131I against, in vivo and in vitro. Wissler, Barker, Flax, LaVis, and Talmage, 761

Kidney, effect of fasting on dihydroxypyridine nucleotide content of, in rat. Jedeikin, Thomas, and Weinhouse, 587
—, immediate passage of tumor cell emboli through. Zeid- man, Gamble, and Clovis, 814
—, incorporation of adenine and guanine into pentose-sulfuric acid of, in rats bearing human tumors. Balis, Van Prag, and Azen, 695
—, mouse, concentrations of riboflavin, flavin adenine di- nucleotide, and flavin mononucleotide in. Shapiro, Dietrich, and Shils, 373
—, mouse, concentrations of thiamine and coenzyme A in Shils, Friedland, Fine, and Shapiro, 581
—, mouse, effect of fluorocacetate and fluorocitrate on citric acid concentration in. Dietrich and Shapiro, 585
—, of sarcoma-bearing hamsters, radioactivity in, following administration of vitamin B12-CoA6. Miller, Gaul, Lemon, and Ross, 945
—, rat, effect of estrogen administration on activities of 5-glucuronidase and acid and alkaline phosphatase in. Melchior and Micuta, 560
—, rat, metabolic pattern for pyruvate-2-C14 with slices of. Busch, Goldberg, and Anderson, 175

Lactic acid, formation of, in vivo by normal and leukemic leukocytes. McKinney and Rundles, 67
—, in blood of tumor-bearing and tumor-free mice. Norman and Smith, 1007

Lactic dehydrogenase, activity compared with phosphohexose isomerase activity in plasma, liver, and tumor of tumor- bearing rats. Bodansky and Scholler, 894
—, activity in serum of mice with transplanted and induced tumors. Høj, Suntzeff, and Cowdry, 537
—, in serum, some properties of. Hill, 460

Leptobacterium bulgaricus, 6-azauracil as an antagonist of uracil and uridine in. Handschumacher and Welch, 965
—, effect of uracil acid analogs on growth of. Holmes and Welch, 321

Leiomyosarcoma HT, growth of, in uteri and other sites of hamsters. Homburger, Tregier, and Grossman, 106

Leuconostoc casei, inhibited by 6-azauracil. Handschumacher and Welch, 965

Leuconostoc citrovorum (Pediococcus cerevisiae), effect of orotic acid analogs on growth of. Holmes and Welch, 961
—, inhibited by 6-azauracil. Handschumacher and Welch, 965

Leuconostoc leichmannii, inhibited by 6-azauracil. Handschumacher and Welch, 965

Leukemia, acceleration of lymphoma development by cell-free filtrates, in mice. Schwarts, Schoolman, and Szanto, 359
—, control of, by endocrinologic methods. Huggins, 925
—, human, levels of glutamic acid dehydrogenase and glutamic-oxaloacetic transaminase in blood. Waisman, Mond- er, and Williams, 344
—, human, responses to therapeutic agents. Kar Swan, 694
—, lactate formation and glycolyase activity in leukocytes in vivo in. McKinney and Rundles, 67
—, mouse, attempts to “block” sources of methyl groups in therapy of. Morrison and Higgins, 392

Leukemia L1210, effect of pyridine-2-carboxaldehyde thio- semicarbazone and thiohydroxazole on, in mice. Brock- man, Thomson, Bell, and Skipper, 167

Leukemia L182T, effect of pyridine-3-carboxaldehyde thio- semicarbazone and thiohydroxazole on, in mice. Brock- man, Thomson, Bell, and Skipper, 167
—, inhibition of, by antagonists of methyl groups. Morrison and Higgins, 392

Leukemia L14464, ascites form, development of resistance to carcinostatic agents by. Law, 696
—, effect of pyridine-3-carboxaldehyde thiosemicarbazone and thiohydroxazole on, in mice. Brockman, Thomson, Bell, and Skipper, 167
—, inhibition of, by antagonists of methyl groups. Morrison and Higgins, 392

Leukemia L12175, ascites form, development of resistance to carcinostatic agents by. Law, 696

Leukemia L5147, lymphatic, ascites form, amino acid biogenesis from labeled glucose by. Kit and Graham, 117
—, lymphatic, oxidation of labeled glucose by. Kit, 70

Leukemic extracts, cell-free, parotid gland tumor in mice in-oculated when newborn with. Dulaney, 977

Leukocytes, normal and leukemic, lactate formation and glycolyase activity in. McKinney and Rundles, 67

Leukosis E.L-4, C97Bl, passive immunity in mice against, by means of iso-immune serum. Gorer and Amos, 338

Lewis fibrosarcoma #4, in rats, immediate passage of tumor cell emboli of, through liver and kidney. Zeidman, Gamble, and Clovis, 814

Lewis lymphoma, in rats, immediate passage of tumor cell emboli of, through liver and kidney. Zeidman, Gamble, and Clovis, 814

Lewis sarcoma 341, tryptophan peroxidase in liver of mouse bearing. Wood, Riva, and Knox, 1033

Light, photoreactivating, influence on tumors induced by ultra- violet radiation. Kelner and Taft, 860

Lipemia, in the tumor-bearing rat as a result of force-feeding or high-fat diet. Frederick and Begg, 546

Lipids, in skeletal muscle of normal and tumor-bearing rats. Boyd and Crandall, 128
—, levels in five organs of rats bearing Walker 256 carcino- sarcoma. Boyd, Kelly, Murdoch, and Boyd, 535

Liposarcoma, spontaneous, Dx tumor in mouse, XYZ factor in. Casey, Hathaway, Dowling, and Casey, 394

Liver, cirrhosis of, amino acid transport in perfused livers from rats with. Burke and Miller, 330
—, comparison of phosphohexose isomerase and lactic dehydrogenase activities of, in tumor-bearing rats. Bodansky and Scholler, 594
—, damage of, produced in mice by radioactive colloidal gold. Upton, Furth, and Burnett, 211
—, early pathological changes in, produced by feeding
Mammary carcinoma M.M.C., RIII strain, mouse, conditions influencing transplantation into rats. Pikovski and Schlesinger, 948

Mammary thymus, relation to high fat diet in rat. Benson, Lev, and Grand, 155

Mammary glands, hyperplasia of, in mice with mammatropic pituitary tumors. Furth, Gadsden, Clifton, and Anderson, 600

Mammary tumor CSHBA. See Adenocarcinoma CSHBA.

Mammary tumor agent, effect on mammary cancer in mice of different ages and stocks. Bittner, 1098

Mammatropic pituitary tumors, in mice, properties and response to estradiol. Furth, Gadsden, Clifton, and Anderson, 600

Manose, inhibition of respiration by, in mouse Ehrlich ascites tumor in vitro. Brin and McKee, 994

Mecca lymphosarcoma. See Lymphosarcoma Mecca.

Melanoma #1, distribution of human tissue antigens in, grown in rats. Korngold, 956

Melanoma C3HBA, mouse, uptake of $^{32}$P in intracranial transplants. Thomas, Bovington, and Krohmer, 796

Melanotic tumor, in Drosophila, induced in wild $^{51}-58$ strain by factor from fa-e strain, effects of crude and purified preparations. Friedman and Burton, 1059

—, induced in Drosophila. Burton, Harany, and Kopac, 402
—, of hamster, transplantable, induced by 9,10-dimethyl-1,2-benzanthracene. Shubik, Della Porta, Rappaport, and Spencer, 1081

6-Mercaptopurine, effect on incorporation of glycine-$^{14}$C in vivo into purines of ascites tumors. Greenlees and LePage, 1060

—, effect on on vivo metabolism of ascites tumor cells. Fernandez, LePage, and Lindner, 154

Mesocricetus auratus, blood cell factors and tumor growth in cheek pouch of. Sherman and Patt, 994

Mesotheurium, tumors caused by, in man. Furth and Tullis, 5

Metastasate, ability of three transplanted human tumors for, when grown in chick embryos. Dagg, Kurnofsky, and Roddy, 589

—, immediate passage of tumor cell emboli through the liver and kidney. Zeckman, Gamble, and Clovis, 1014

—, absence of, in lung, relation to size of primary tumor in mouse. Martines, Miroff, and Bittner, 813

Methionine, dietary, lack of effect on resistance to lymphoid tumor transplantation in chick. Hill and Garrett, 1019

—, effect in diet on tumor-host relationship in rat. Hill, 753

2-Methyl-4-acetylaminobiphenyl, noncarcinogenic in rat. Miller, Sandin, Miller, and Rusch, 592

—, leading to induction of, in mouse. Zeidman, Gross, and Drosophila. 585

Methylbiphenyl(2-chloroethyl)amine, in vivo demethylation of, by liver homogenates. Trams and Nakdarni, 1069

—(or 30)-Methylcholanthrene, blood cell factors and growth of tumor induced by, in cheek pouch of hamster. Sherman and Patt, 994

—, carcinogenic activity diminished in presence of squalene. Sobel and Marmorton, 600

—, effect of cortisone on skin tumors by. Spain, Molo-
mot, and Novikoff, 128

—, effect of injection into rat on demethylase and reductase activity of liver in vitro. Conney, Miller, and Miller, 430

—, in secones or mineral oil, effect on skin sterols. Brooks and Baumann, 527

—, in induction of skin carcinoma in parakeet. Schlumbe-
gerber, 1048

—, in induction of tumors in skin without follicles, in duck. Rigdon, 904

—, serum lactic dehydrogenase activity in mice with tumors induced by. Hsieh, Suntzeff, and Cowdry, 287

—, spontaneous regression of squamous-cell tumors in chickens, produced by. Rigdon and Hooks, 946

20-Methylcholanthrene-11-C, binding to skin proteins of mice of. Heidelberger and Moldenhauer, 442

2-Methyl-N,N'-diacetylbenzidine, carcinogenic activity of, in rat. Miller, Sandin, Miller, and Rusch, 592

2'-Methyl-4-dimethylaminobenzene, amino acid metabolism in perfused livers of rats fed. Burke and Miller, 330

—, in induction of hepatoma in rats, effect on ethanolamine output. Wilcox and Luck, 986

—, levels of diphenylpyridine nucleotide in livers of rats fed. Jedeikin, Thomas, and Weinhouse, 867

—, pathological changes in rat liver produced by feeding of. Barber, 142

N-methylformamide, tested as inhibitor of mouse leukemia. Morrison and Higgins, 299

Methyl groups, attempt to block sources of, in mouse leukemia. Morrison and Higgins, 299

Microbiology, studies of 6-azauracil on growth inhibition of various strains of bacteria. Handshumberach and Welch, 905

Microscopy, phase contrast, of Ehrlich ascites tumor cells treated with antisera to cell components. Horn, 501

Microsomes, concentration in normal and tumors rat liver. Peterman, Misum, and Hamilton, 920

—, of rat chloroma, relation to activity of verdoperoxidase. Schults, Turtle, Shay, and Grenstein, 589

Mitochondria, from ascites tumor cells, cytotoxic effect of anticancer to. Horn, 595

—, of rat chloroma, relation to activity of verdoperoxidase and succinocidase. Schults, Turtle, Shay, and Grenstein, 589

Mitosia, inhibition of, in Yoshida ascites tumor by x-radiation. Freyman, 920

Mitotic index, of liver, increased in mice with tumors. Malmgren, 252

Monkeys, experimental production of carcinoma in rhesus by high-boiling catalytically cracked oil. Sugiiura, Smith, and Sunderland, 241

Monsellosarcastate, in vivo effect on citric acid levels in normal and tumorous mouse tissues. Dietrich and Shapiro, 585

Monsellosarcastate, in vivo effect on citric acid levels in normal and tumorous mouse tissues. Dietrich and Shapiro, 585

Monomethylamine, color reactions with aminoacids as indication of carcinogenic activity. Finck, 921

Murphy-Sturm lymphosarcoma. See Lymphosarcoma Murphy-Sturm.

Muscle, skeletal, concentration of lipids and water in normal and tumor-bearing rats. Boyd and Crandall, 198

—, skeletal, effect of fasting on diphenylpyridine nucleotide content of, in rat. Jedeikin, Thomas, and Weinhouse, 867

—, skeletal, muscle, concentrations of riboflavin, flavin adenine dinucleotide, and flavin mononucleotide in. Shapiro, Dietrich, and Sils, 575

—, skeletal, muscle, concentrations of thiamine and coenzyme A in. Shils, Friedland, Fine, and Shapiro, 581

Nitrogen mustard. See Methylbipyphenyl(2-chloroethyl)amine.

Nitroin, effect on free amino acids of Yoshida ascites tumor. Roberts, Tanaka, Tanaka, and Simonsen, 970

Novikoff hepatoma, demethylating activity of, when compared with normal rat liver. Trams and Nakdarni, 1089

Nucleic, deoxyribonucleic acid content, in normal and tumorous growth of thymus. Partasen, 506

—, from ascites tumor cells, cytotoxic effect of anticancer to. Horn, 595

Nucleic acids. See also Deoxyribonucleic acid and Ribonucleic acid.

—, in human bone marrow particles in malignancy. Loebl, Wright, and Hall, 418

—, metabolism of, in regenerating rat liver, intermediates in
synthesis of DNA pyrimidine nucleotides. Hecht and Potter, 990
—, metabolism of, in regenerating rat liver, rate of deoxyribo-
nucleic acid synthesis in vivo. Hecht and Potter, 998
—, metabolism of, in regenerating rat liver, studies on growing
rats. Takagi, Hecht, and Potter, 994
—, metabolism of, in tumor tissues. Potter, 658
—, purine metabolism in heterologous implants of human tumours. Bennett, Skipper, Toolan, and Rhoads, 628
Nucleoproteins, of aso dye-induced rat liver tumors. Peter-
mann, Misam, and Hamilton, 620
Nutrient medium, for long-term cultivation of strain L-929
cells. Evans, Bryant, McQuilkin, Floramonti, Sanford, Westfall, and Earle, 77
—, for tissue culture of strain L cells, chemically defined.
Evans, Bryant, Floramonti, McQuilkin, Sanford, and Earle, 77

Orolic acid-1-C14, incorporation into liver and hepatoma slices, in mouse. Brown, Katz, and Chaihoff, 509
Octanoate-1-C14, incorporation into liver and hepatoma slices, in mouse. Brown, Katz, and Chaihoff, 509
Oretic acid, biological studies of antimetabolites of. Holmes and Welch, 251
—, conversion to uridine nucleotides inhibited by pyrimidine
antimetabolites. Stone and Potter, 1083
Oretic acid-6-C14, incorporation into Ehrlich ascites cells in
vivo alone and with adenosine monophosphate. Edmonds and LePage, 222
—, uptake of, in regenerating rat liver in vivo. Hecht and
Potter, 998
—, uptake of, in young growing rat. Takagi, Hecht, and
Potter, 994
—, utilization of, for DNA synthesis in vivo in regenerating
rat liver. Hecht and Potter, 999
Osmunda cinnamomea, deoxyribonucleic acid in normal and
malignant growth of. Partanen, 300
Ovariectomy, effect on -glucuronidase activity of pituitary.
Melchior and Micota, 280
Ovary, granulosa-cell tumor of, in mouse, effect of hormones
on. Green, 417
—, spontaneous and transplantable tumor of, influence of
gonads and steroid hormones on growth of, in rats. Iglesias
and Mardones, 756
Overfeeding, effect on body and tumor weights in rats. Ingle,
Altamero, and Flores, 457
Oxidation, of labeled substrates by mouse liver and hepatoma
slices. Brown, Katz, and Chaihoff, 509
Oxygen consumption, of regenerating rat liver, higher than
that of normal or sham-operated controls. Perkins and
Irving, 496

Parakeet, transplantable methylcholanthrene-induced skin
carcinoma in. Schlumberger, 1043
—, transplantation of pituitary tumor in. Schlumberger, 149
Parotid gland, tumors of, in mice inoculated when newborn
with cell-free leukemic extracts. Dulaney, 677
Pentobarbital sodium, effect on tumor-necrotizing activity of
several chemical agents in mice. Pradhan, Aichstein, and
Shear, 1062
Pentosenucleic acid. See Ribonucleic acid.
Phenanthrene-9,10-C14, binding to skin proteins of mice of.
Heidelberger and Moldenhauer, 442
Phenobarbital sodium, effect on tumor-necrotizing activity of
several chemical agents in mice. Pradhan, Aichstein, and
Shear, 1062
Phosphatase, acid and alkaline, activity in pituitary, kidney,
and liver, after estrogen administration. Melchior and
Micota, 590
—, alkaline activity of, in serum of tumor-bearing rats.
Frederick and Begg, 548
—, serum acid, copper-resistant, method and clinical values
in health and disease. Reynolds, Lemon, and Byrne, 948
Phosphate, inorganic, effect of concentration of, on inhibition
of respiration by glucose in ascites tumor. Brin and McKee,
504
Phosphate-P14, uptake of, in experimental tumors and normal
ocular tissue. Thomas, Bovington, and Krohmer, 796
Phosphochoenase isomerase, activity compared with lactic de-
hydrogenase activity in plasma, liver, and tumor of tumor-
bearing rats. Bodansky and Scholler, 884
Phospholipid, in skeletal muscle of normal and tumor-bearing
rats. Boyd and Crandell, 198
—, levels in five organs of rats bearing Walker 256 carcino-
sarcoma. Boyd, Kelly, Murdoch, and Boyd, 553
Phosphorus, and calcium, levels in bones of castrate mice.
Nerurkar and Sahasrabudhe, 804
Phosphorus-C14, effect alone and with cortisone on transplanted
mammary adenocarcinomas. Boucher, Syverton, and
Bittner, 22
—, tumors caused by. Furth and Tullis, 5
Phytocerin, effect of various drugs on tumor-necrotizing activity
of, in mice. Pradhan, Aichstein, and Shear, 1062
Pituitary gland, hormones of, effect on carcinogenesis with
9,10-dimethyl-1,2-dibenzanthracene in hypophysectomized
rats. Moon, Li, and Simpson, 111
—, independence of ovarian tumors in mice of hormones
from. Green, 417
—, induction of tumors of, in rodents, following changes in
thyroid function. Gorbman, 90
—, rat, effect of estrogen administration on activities of
-glucuronidase and acid and alkaline phosphatase in.
Melchior and Micota, 280
—, relation of hypophysectomy and lowered food consump-
tion to ethanolamine output in rat. Wilcox and Luck, 956
—, relation to lipemia in tumor-bearing rat. Frederick and
Begg, 548
Pituitary tumors, dependent and autonomous, induced in rat
by hyperestrogenization. Furth, Clifton, Gadaden, and
Buffett, 506
—, induced by iodine-131. Furth and Tullis, 5
Polyethylene glycol, effect of, on tumor necrosis and growth,
size, and replication in mouse. Brown, 417
Polyester, induction and persistence of, in tail epithelium of
frog embryos immersed in solutions of 9,10-dimethyl-1,2-
benzanthracene. Green and Herdeck, 1009
Polyisorbates, from S. marcescens, effect of various drugs of
tumor-necrotizing activity of, in mice. Pradhan, Aichstein,
and Shear, 1062
Polyvinylpyrolidone, lack of effect on heterotransplantation
of human cancers. Handler, Davis, and Sommers, 52
Porphyria, isolation of, from chloroma of rats. Schultz and
Schwartz, 565
—, synthesis of, in chloroma of rat, measured by C14 uptake
after administration of glycine-2-C14. Schultz and Schwartz,
565
Cancer Research

Pregnancy, lack of effect on serum lactic dehydrogenase activity in mice. Haish, Suntzeff, and Cowdry, 237

Priscoline, effect on tumor-necrotizing activity of several chemotherapeutic agents in mice. Pradhan, Achinstein, and Shear, 1068

Progestosterone, effect of subcutaneous pellets of, on growth of ovarian tumors in castrated rats. Iglesias and Mardones, 756

—, effect on growth of tumors in uteri and other sites of castrate rodents. Hamburger, Tregier, and Grossman, 106

Properdin system, possible role in growth of heterologously transplanted tumors, effect of serum of human carcinoma in rats. Herbut and Krzemer, 1048

Propionate-1-C14, incorporation into liver and hepatoma slices, in mouse. Brown, Katz, and Chaikoff, 509

Propylthiouracil, effect on transplantation of thyrotropic pituitary tumors in mice on low iodine diet. Dent, Gadeken, and Forth, 171

—, limited response of tumor-bearing rat to. Begg and White, 544

Prostate, control of cancer of, by endocrinologic methods. Huggins, 825

Protein binding, of 3,4-benpyrene metabolites to mouse skin. Tarbell, Brooker, Seifert, Vanpeter, Claus, and Conway, 87

—, of 9,10-dimethyl-1,2-benzanthracene-9,10-C14 to mouse skin. Darchun and Hadler, 316

—, of C14-labeled hydrocarbons to skin. Heidelberger and Moldenhauer, 442

Protoporphyrin, crystalline, isolation of, from chloroma of rat. Schultz and Schwartz, 585

Pteridium aquilinum, deoxyribonucleic acid in normal and tumorous growth of. Partanen, 300

Purines, incorporation of C14-labeled compounds into, in heterologous implants of human tumors. Bennett, Skinner, Toolan, and Rhoads, 282

—, metabolism in Ehrlich carcinoma cells in vivo. Edmonds and LePage, 222

Pyridine-2-carboxaldehyde thiosecarboxydrazone, antileukemic activity of, in mice. Brockman, Thomson, Bell, and Skipper, 167

Pyridine-3-carboxaldehyde thiosemicarbazone, antileukemic activity of, in mice. Brockman, Thomson, Bell, and Skipper, 167

Pyrimidine, derivatives of, tested for orotic acid antimetabolite activity in vivo. Stone and Potter, 1083

—, nucleotides of DNA, intermediates in synthesis of, in regenerating rat liver. Hecht and Potter, 999

Pyruvate, effect on oxidation of glucose by various tissues. Kit, 70

Pyruvate-2-C14, incorporation into liver and hepatoma slices, in mouse. Brown, Katz, and Chaikoff, 509

—, metabolism of, in vivo, with normal and tumorous rat tissues. Busch, Goldberg, and Anderson, 175

Rabbits, papillomatosis of, virus mass relations in. Beard, 279

—, survival of chromium-51-labeled erythrocytes in tumor-bearing. Ulmann, Fish, and Hyman, 855

Radiation. See also X-radiation.

—, influence of photoreactivating light on tumors induced by ultraviolet. Kelnar and Taft, 860

—, nuclear, in treatment of cancer. Lawrence and Tobias, 185

—, whole-body, in induction of pituitary tumors in rodents. Gorbman, 99

Radioisotopes, induction of neoplasms by. Furth and Tullis, 5

Radio-oxidation, of dopes to melanin, lack of effect of inhibitor in normal and neoplastic tissue on. Hirsch, 1979

Radioisotopes, tumors caused by, in man. Furth and Tullis, 5

Rana pipiens, embryos, effects of hydrocarbon-protein conjugates on, induction and persistence of polyplody in tail epithelium. Green and Herdeck, 1000

Reducase, activity of, in liver, after injection of 3-methylcholanthrene into rats. Conney, Miller, and Miller, 420

Report: the International Union against Cancer, 959

Resistance, to drugs, discussion of. Skipper, 717

—, to drugs, evolution of, in relation to differences between cancers. Law, 698

Respiration, of regenerating rat liver. Perkinson and Irving, 496

Reticuloendothelium, effect of loading of, on growth rate of Ehrlich mouse ascites tumor. Baliff, 479

Review, carcinogenesis by radioactive substances. Furth and Tullis, 5

—, chemical carcinogenesis as a chronic toxicity test. Shubik and Siec, 728

—, control of cancers of man by endocrinologic methods. Huggins, 825

—, differences between cancers in terms of etiologic factors. Berenblum, 675

—, differences between cancers in terms of evolution of drug resistance. Law, 698

—, differences between cancers in terms of therapeutic responses. Karnofsky, 864

—, immunohistochemistry in cancer research. Plescia, 748

—, pituitary tumors in rodents following changes in thyroid function. Gorbman, 99

—, problems before the Association. Anderson, 471

—, radioactive isotopes and nuclear radiations in treatment of cancer. Lawrence and Tobias, 186

—, some biochemical characteristics of morphologically separable cancers. Greenstein, 641

—, studies of normal and malignant tissue antigens. Witebsky, Rose, and Shulman, 831

—, symposium on a critical appraisal of the biochemical characteristics of morphologically separable cancers. American Cancer Society, 687

—, the fallacy of the concept of virus “masking.” Beard, 279

—, the mite of immunology. Eichwald, 918

Rhabdomyosarcoma, serum lactate dehydrogenase activity in mice with transplanted. Haish, Suntzeff, and Cowdry, 237

Riboflavin, free, measured in normal and tumor tissues of mouse. Shapiro, Dietrich, and Shils, 875

—, in normal and tumor tissues of mouse, and relation of analog to cancer chemotherapy. Shapiro, Dietrich, and Shils, 795

Ribonucleic acid. See also Nucleic acids.

—, radioactivity in, after injection of orotic acid-4-C14 in vivo. Hecht and Potter, 998

—, synthesis in rats bearing human tumor transplants. Balis, Van Praag, and Aseev, 625

Rutgers l sarcoma, growth rate of, in the rat. Migliarese and Bly, 129

Salivary glands, submaxillary, lipid and water levels in, in rats bearing Walker 256 carcinomas. Boyd, Kelly, Murdoch, and Boyd, 535

Salmon, occurrence of odontogenic tumors in. Schlumberger and Katz, 569

Sarcomas, in hamster, induced by methylcholanthrene, uptake of vitamin B12-Co by. Miller, Gaull, Lemon, and Ross, 842

—, in hamster, methylcholanthrene-induced, studies on blood cell factors and tumor growth in cheek pouch. Sherman and Patt, 804

Sarcoma 37, ascitic form, used in attempt to establish actively acquired tolerance to tumors. Wallace, 846

—, in mice, effect of subcutaneous tumor on ascites tumor. Goldie, Walker, Kelley, and Gains, 653

—, in mice, effect of yttrium injection on. Goldie and West, 454

—, in mice, conditions influencing transplantation into rats. Pikoavski and Schlenger, 845

Sarcoma 180, ascitic form, effect of asaerine and 6-mercaptopurine on in vivo metabolism of. Fernandes, LePage, and Lindner, 154
index to volume 16

---, acetic form, in mouse, metachromatic differential fluorochroming of living and dead cells with acridine orange. Vinegar, 900
---, acetic form, in mouse, purine biosynthesis and inhibitors in. Greenlee and LePage, 908
---, effect of actinomycin D on acetic form of, in mouse. Gregory, Pugh, Bats, and Thelen, 965
---, growth of, in uteri and other sites of mice. Hamburger, Tregier, and Grossman, 106
---, inhibition of growth of, by combinations of B-antagonists and acid hydrazides, in mice. Brockman, Thomson, Schabel, and Skipper, 786
---, in mice, effect of subcutaneous tumor on ascites tumor. Goldie, Walker, Kelley, and Gaines, 555
---, in mice, effect of yttrium injection on. Goldie and West, 464
---, mouse, effect of fluorocacetate and fluoroccitrate on citric acid accumulation in homogenates of. Dietrich and Shapiro, 585
---, used in attempt to establish actively acquired tolerance to tumors. Wallace, 548
Sarcoma AA, serum lactic dehydrogenase in rats with. Hill, 460
Sarcoma E-1, in rat, effects of sulfur amino acids on tumor-host relationship in rat bearing. Hil, 738
Sarkomycin, clinical experiences with, as therapeutic agent in cancer. Magill, Golbey, Karnofsky, Burchenal, Stock, Rhodes, Crandall, Yagishita, and Gelhorn, 960
---, effect on free amino acids in Ehrlich ascites tumor in mice and Yoshida sarcoma in rats. Roberts, Tanaka, Taikna, and Simonsen, 970
Sebum, possible role of squalene as a protective agent in, in relation to carcinogen. Sobel and Marmorston, 500
Serine, in vivo biosynthesis of, from labeled glucose by various normal and tumor tissues. Kit and Graham, 117
---, preferential labeling of, in tumor compared with normal lymphatic tissue, on incubation with glycerol-1-C14. Kit and Graham, 997
---, stimulatory to growth of Walker 256 carcinosarcoma in tissue culture. McCoy, Maxwell, and Neuman, 970
Serotonin, effect of various drugs on tumor-necrotizing activity of, in mice. Pradhan, Achinstein, and Shear, 1002
Serratia marcescens polysaccharide, effect of various drugs of tumor-necrotizing activity of, in mice. Pradhan, Achinstein, and Shear, 1002
Serum, mouse, electrophoretic mobility of lymphosarcoma cells in presence of. Hartman and Nugenter, 617
Serum acid phosphatase, copper-resistant, method and clinical values in health and disease. Reynolds, Lemon, and Byrnes, 943
Serum lactic dehydrogenase, activity in mice with transplanted and induced tumors. Hsieh, Suntzeff, and Cowdry, 937
---, some properties of. Hill, 460
Shope papilloma virus, of rabbits, studied in Soviet Union. Shimkin and Shope, 915
Silver foil, tumors induced in rats by subcutaneous imbedding of. Oppenheimer, Oppenheimer, Danishefsky, and Stout, 439
Skin, binding of C14-labeled hydrocarbons to proteins of. Heidelberger and Moldenauer, 448
---, carcinomas of, in parakeet, induced by methylcholanthrene. Schlumberger, 1048
---, mouse, effect of cortisone on carcinogenesis by methylcholanthrene. Spain, Molomut, and Novikoff, 158
---, mouse, effects of hormonal factors on steroids of. Kundt, Murphy, and Dreisbach, 63
---, mouse, metabolic products of 3,4-benpyrene after painting of. Tarbell, Brooker, Seifert, Vanterpool, Claus, and Conway, 57
---, peroxidase protein binding of 9,10-dimethyl-1,2-benzanthrene-9,10-C14 to. Darchun and Hadler, 316
---, possible role of squalene as protective agent in subcutaneous tumor of. Sobel and Marmorston, 500
---, sterols of, effects of hyperplasia-inducing hydrocarbons on. Brooks and Baumann, 537
---, tumors of, induced in monkeys by high-boiling catalytically cracked oil. Sugiuira, Smith, and Sunderland, 951
---, tumors of, induced with minute doses of 9,10-dimethyl-1,2-benzanthracene. Klein, 128
---, tumors of, in mouse, influence of photoactivating light on tumors induced by ultraviolet radiation. Keiner and Taft, 800
---, without follicles, tumors induced in, in duck. Rigdon, 804
Smoking, and lung cancer, guest editorial. Little, 183
---, comment on guest editorial on. Graham, 816
---, comment on guest editorial on. Little, 917
---, on the burning temperatures of tobacco. Ermola and Holati, 400
Somatotropic pituitary tumors, also mammotropic. Furth, Clifton, Gadsden, and Buffet, 608
Soviet Union, cancer research in, guest editorial. Shimkin and Shope, 915
Specificity, mouse strain, of ascitic tumor cell, effect of low temperature and storage on. Morgan, Guerin, and Morton, 907
Spotzen, incorporation of adenine and guanine into pentose-nucleic acid of, in rats bearing human tumors. Balis, Van Praag, and Aessen, 693
---, mouse, uptake of glycerol-1-C14 by, in vitro. Kit and Graham, 997
---, of sarcoma-bearing hamsters, radioactivity in, following administration of vitamin B12-CoC14. Miller, Gaull, Lemon, and Ross, 942
---, rat, metabolic pattern for pyruvate-2-C14 with slices of. Busch, Goldberg, and Anderson, 175
Squalene, possible role as protective agent in sebum, in relation to carcinogen. Sobel and Marmorston, 500
Squamous-cell tumors, carcinomatoid, in chicken, spontaneous regression of. Rigdon and Hooks, 346
Stainless steel foil, tumors induced in rats by subcutaneous imbedding of. Oppenheimer, Oppenheimer, Danishefsky, and Stout, 439
Steroid hormones, effect on growth of spontaneous and transplantable ovarian tumor in rats. Igleias and Mardones, 756
Sterols, of mouse skin, effects of hormonal factors and "hairless" character on. Kundtach, Murphy, and Dreisbach, 63
---, of skin, effects of hyperplasia-inducing hydrocarbons on. Brooks and Baumann, 537
Stomach, mouse, concentrations of riboflavin, flavin adenine dinucleotide, and flavin mononucleotide in. Shapiro, Dietrich, and Shiba, 757
---, mouse, concentrations of thiamine and coenzyme A in. Shiba, Friedland, Fine, and Shapiro, 881
Strain L-5129 cells, nutrient medium for culture of. Evans, Bryant, Fioramonti, McQuilkin, Sanford, and Earle, 77
---, nutrient medium for long-term cultivation of. Evans, Bryant, McQuilkin, Fioramonti, Sanford, and Earle, 87
---, tumor-producing capacity of, in mouse, after 10 years in vitro. Sanford, Hobbs, and Earle, 162
Streptococcus faecalis, effect of orotic acid analogs on growth of. Holmes and Welch, 251
---, inhibited by 6-azauracil. Handschumacher and Welch, 965
Stress, effect of thirst on tryptophan peroxidase activity in liver of mice. Wood, Rivlin, and Knox, 1028
Streptomycin, tumors caused by. Furth and Tullis, 5
Sucinate, utilization by Ehrlich ascites tumor cells in presence of γ-globulin, complement. Flax, 774
Sucinate dehydrogenase, liver activity decreased after partial hepatectomy. Perkins and Irving, 496
Sucinonidase, relation to verdoperoxidase activity in cellular particulates of rat choroma. Schultz, Turtle, Shay, and Gruenstein, 569
Sulfur, dietary levels, in relation to action of L-acectaminophen
fluorocarbon on growth and liver composition of rats. Gutmann, 
Filibert, and Peters, 840
Sulfur amino acids, effects on tumor-host relationship in rat. 
Hilf, 783
Supersatant, of rat chloroma, activation of peroxidase by. 
Schulte, Turtle, Shay, and Gruenstein, 589
Symphathetic drugs, effect on tumor-necrotizing activity of 
several chemical agents in mice. Pradhan, Achinstein, and 
Shear, 1082
Symposium, a critical appraisal of the biochemical character-
istics of morphologically separable cancers. American Cancer 
Society, 657
TAS ascites tumor, effect of azaserine and 6-mercaptopurine on 
in vivo metabolism of. Fernandes, LePage, and Lindner, 154
——, in mouse, effect of low temperature and storage on 
viability and mouse strain specificity of ascitic tumor cells. 
Morgan, Guerin, and Morton, 907
——, in mouse, purine biosynthesis and inhibitors in. Green-
lees and LePage, 806
Tasalum, tumors induced in rats by subcutaneous im-
bedding of. Oppenheimer, Oppenheimer, Danishefsky, and 
Stout, 489
Tax, from tobacco, relation to burning temperatures. Ermala 
and Holsti, 400
Taurine-1,2-C4, incorporation into Yoshida ascites tumor. 
Roberts and Tanaka, 204
Tasatemirism, aminoferones undergoing, relation to color 
reactions and carcinogenic activity. Finck, 931
Tazanates, produced in rat by a transplantable fibrosarcoma. 
Selye and Richer, 856
Temperatures, low, effect on viability and mouse strain 
specificity of ascitic tumor cells. Morgan, Guerin, and 
Morton, 907
——, produced in smoking of tobacco. Ermala and Holsti, 400
Testis, mouse, concentrations of riboflavin, flavin adenine 
dinucleotide, and flavin mononucleotide in. Shapiro, Die-
trich, and Shils, 575
——, mouse, concentrations of thiamine and coenzyme A in. 
Shils, Friedland, Fine, and Shapiro, 581
Testosterone, carcinogenic action against mouse tumors in 
combination with 8-azaguanine, deoxyyridoxine, and 6,7-
dimethyl-8-hydroxymethyl-7-oxoazoloxine. Shapiro, Dietr-
ich, and Shils, 575
——, effect alone or with estrogen on skin tolerus in castrated 
mice. Kandutsch, Murphy, and Dreischah, 68
——, effect of subcutaneous pellets of, on growth of ovarian 
tumor in castrated rats. Iglesia and Mackones, 784
Thiamine, concentration of, in normal and tumorous mouse 
tissues. Shils, Friedland, Fine, and Shapiro, 581
Thorium dioxide, effect on growth rate of Ehrlich ascites tumor 
in vivo. Baillif, 479
——, tumors caused by. Purth and Tullia, 5
Thioridazine, See Thoridazine dioxide.
L(-)-Theophoraphenicol, effect on in vivo utilization of 
adenoic monophosphate as nucleic acid purine precursor in 
species tumors cells. Greenlees and LePage, 808
——, effect with azaserine on survival of tumor-bearing mice.
Greenlees and LePage, 808
Thymectomy, and irradiation of mice, for indirect induction of 
lymphomas in thymic grafts. Kaplan, Carnes, Brown, and 
Hirsch, 482
Thymus, grafts of, genetic evidence of the origin of tumor cells 
in induced lymphomas in mice from. Kaplan, Hirsch, and 
Brown, 484
——, grafts of, role in indirect induction of lymphomas in ir-
radiated mice. Carnes, Kaplan, Brown, and Hirsch, 482
——, lipid and water levels in, in rats bearing Walker 256 
carcinomas. Boyd, Kelly, Murdoch, and Boyd, 585
——, lymphoma induction in, nonirradiated grafts of, in mice. 
Kaplan, Carnes, Brown, and Hirsch, 482
——, rat, uptake of glycerol-1-C4 by, in vivo. Kit and Graham, 
987
Thyroid, effect of propylthiouracil administration on weight of, 
in normal and tumor-bearing rats. Begg and White, 544
——, function of, in relation to pituitary tumors in rodents. 
Gorham, 99
——, normal and malignant tissue antigens in. Witebsky, 
Rose, and Shulman, 381
Thyroidectomy, in induction of pituitary tumors in rodents. 
Gorham, 99
——, surgical, in production of pituitary tumors in mice. Dent, 
Gadsden, and Purth, 171
Tina feel, lack of tumor induction in rats by subcutaneous im-
bedding of. Oppenheimer, Oppenheimer, Danishefsky, and 
Stout, 489
Tissue culture, action of cytotoxic antisera on HeLa strain of 
human carcinoma. Miller and Hux, 506
——, of strain L cells, long-term. Evans, Bryant, McQuilkin, 
Fiornamont, Sanford, Westfall, and Earle, 87
——, of strain L cells, tumor-producing capacity in mouse after 10 
years in vivo. Sanford, Hobbs, and Earle, 162
——, of strain L cells, with a protein-free medium. Evans, 
Bryant, Fiornamont, McQuilkin, Sanford, and Earle, 77
——, of Walker 256 carcinomas, amino acid requirements of. 
McCoy, Maxwell, and Neuman, 979
Tobacco, burning temperatures in pipe, cigarette, and cigar 
smoking. Ermala and Holsti, 400
——, conversion of normal to tumor cells, in crown gall. Braun, 
83
——, relation to lung cancer. Kotin, 375
Tolerance, to foreign tumors, attempts at production of 
actively acquired. Wallace, 348
Trachea-larynx, lipid and water levels in, in rats bearing 
Walker 256 carcinomas. Boyd, Kelly, Murdoch, and 
Boyd, 585
Transplantation, heterologous, of human cancers into guinea 
pies, uptake of P18. Thomas, Bovington, and Krogman, 796
——, heterologous, of human cancers into hamster. Handler, 
Davis, and Sommers, 82
——, heterologous, of human carcinomas into rats, effect of 
symosan on. Herbst and Krasner, 1048
——, heterologous, of human tumors into hamsters, influence 
of regenerating liver on purine metabolism. Balis, Van 
Prasag, and Brown, 628
——, heterologous, of human tumors into rats. Herbst and 
Krasner, 408
——, heterologous, of mouse tumors in rats pretreated with 
mouse tissue. Pikovski and Schlesinger, 848
——, homologous and heterologous, attempts at production of 
actively acquired tolerance. Wallace, 348
——, iso-, homo-, and homoiografts, of fibrosarcoma ascites 
cells in rat, relationship between iodine-131 metabolism, 
tumor growth, and regression. Scott and Daniels, 754
——, of human sarcoma into rats, pentosephosphate acid 
synthesis studies. Balis, Van Prasag, and Aessen, 828
——, of induced melanotic tumor of hamster. Shubik, Delta 
Ports, Rappaport, and Spencer, 1081
——, of mammary adenocarcinoma in mice, host susceptibility 
to reinculation of tumor. Martinies, Aust, and Bittner, 1028
——, of mammary tumor in susceptible and resistant mice, 
effect of phosphorus-32 and/or cortisone on. Boucher, 
Syverton, and Bittner, 42
——, of methylxolanthrene-induced skin carcinomas in para
eket. Schlumberger, 1045
——, of pituitary tumor in paraeket. Schlumberger, 149
——, of rat bone marrow into x-radiated mice. Nowell, Cole, 
Habermeyer, and Roan, 388
——, of spontaneous Dr liposearcas in mouse. Casey, Hath-
away, Dowling, and Casey, 324
——, of three human tumors in chick embryo and hatched 
chick. Dagg, Karnofsky, and Roddy, 389
Triethylcholinc, inhibitor of mouse leukemia, with other 
agents. Morrison and Higgins, 282
Triethylene melamine, in vitro de-ethylation of, by liver homogenates. Trams and Nadkarni, 1069
Trypan blue, lack of effect on heterotransplantation of human tumors, Buehler, Davis, and Summers, 32
Tryptophan peroxidase, in liver of normal, tumor-bearing, and growth hormone-treated mice. Wood, Rivlin, and Knox, 1053

Tumors, dependent and autonomous mammotrophic pituitary tumors in rats. Furth, Clifton, Gaddesn, and Buffett, 608
——, effect of peritumoral tissue infiltration with radioactive yttrium on growth and spread of malignant cells. Goldie and West, 484
——, effect of size and/or rate of growth of, in mouse, on lung metastasis production. Martinez, Miroff, and Bittner, 815
——, experimental intracranial, by transplantation of neoplastic tissue into anterior chamber, uptake of I$^{131}$ by. Thomas, Bovington, and Krolmer, 706
——, genetic evidence of origin of cells of, in mice with induced lymphomas. Kaplan, Hirsch, and Brown, 434
——, growth of, effect of subcutaneous tumors on actinic tumors, in mice. Goldie, Walker, Kelley, and Gaines, 655
——, growth of, effect of XYZ factor on Dx liposarcoma in mouse. Casey, Hathaway, Dowling, and Casey, 344
——, growth of, in mice, after transplantation of mammary adenocarcinoma at different times following prior inoculation. Martinez, Ait, and Bittner, 1053
——, growth of, in uteri and other sites of rodents. Homburger, Tregier, and Grossman, 106
——, growth of, relationship between I$^{131}$ metabolism and. Scott and Daniels, 794
——, growth rate of Ehrlich mouse ascites tumor. Bailiff, 479
——, growth rates of, in the rat. Migliarese and Bly, 128
——, heterologous transplantation of mouse tumors in rats. Etkin and Scheisinger, 445
——, human, transplantation into chick embryos and hatched chicks. Dagg, Karnofsky, and Boddy, 589
——, incidence in normal female rats. Davis, Stevenson, and Busch, 194
——, induction and growth of thyrotropic pituitary, in mice. Dent, Gaddesn, and Furth, 171
——, induction of, by subcutaneous imbedding of metals in rodents. Oppenheimer, Oppenheimer, Danishefsky, and Stout, 439
——, induction of, in liver, relation to ethanolamine output in rat. Wilcox and Luck, 928
——, induction of, in mouse, by whole-body fast-neutron irradiation. Nowell, Cole, and Ellis, 879
——, induction of, on skin of monkeys, by high-boiling catalytically cracked oil. Sugura, Smith, and Sunderland, 341
——, in skin without follicles, induced in duck by methylcholanthrene. Rigdon, 804
——, melanotic, induced in Drosophila. Burton, Harms, and Kopac, 409
——, odontogenic, in salmon. Schlumberger and Kats, 369
——, of ovary, spontaneous and transplantable, influence of gonads and steroid hormones on growth of, in rats. Iglesias and Mardones, 756
——, of ovary, transplanted in mouse, effect of hormones on. Green, 417
——, regression of, relationship between I$^{131}$ metabolism and. Scott and Daniels, 784
——, transplantable, in rat, producing syndrome of multiple telangiectases. Selye and Richer, 386
——, transplanted and induced, serum lactic dehydrogenase activity in mice with. Hsiieh, Sunteff, and Cowdry, 237
——, weights of, in overloaded rats. Ingle, Altamero, and Flores, 437

Tumor $58FM$, used in attempt to establish actively acquired tolerance to tumors. Wallace, 348
Tumor $58FM$, used in attempt to establish actively acquired tolerance to tumors. Wallace, 348
Tumor dbrB, used in attempt to establish actively acquired tolerance to tumors. Wallace, 348

Tumor-inducing factor, in Drosophila, effects of crude and purified preparations on wild 51-58 strain. Friedman and Burton, 1069
——, purifiication of inherited, in Drosophila melanogaster. Friedman, Burton, and Mitchell, 880

Ultraviolet irradiation, effect on inhibitor of dopa oxidation in normal liver and hepatomas. Hirsch, 1078
——, influence of photoactivating light on tumors induced by. Kelner and Taft, 860

United Kingdom, cancer research in. Haddow, 521

Uracil, and antagonist 8-azauracil, studied in various microbial systems. Hancehuchamer and Welch, 903

Uracil methyl sulfone, as a growth inhibitor of $L. bulgaricus$ 59. Holmes and Welch, 521

Uraciluloseamide, as a growth inhibitor of $L. bulgaricus$ 09. Holmes and Welch, 521

Uranium-233 and -235, tumors caused by. Furth and Tullis, 5

Uretain, effect on tumor-necrotizing activity of several chemical agents in mice. Pradhan, Achinstein, and Shear, 1069

V1 rabbit carcinoma, immediate passage of tumor cell emboli of, through the liver and kidney, in rabbit. Zeidman, Gamble, and Clovis, 614
——, relating to virus “masking.” Beard, 279

Varidoperoxidase, activity and activation of, in cellular particulates of chloroma. Schults, Turtle, Shays, and Gruneinstein, 569

Viability, of ascitic tumor cells, effect of low temperature and storage on. Morgan, Geyer, and Horton, 907

Virus, “masking,” concept of. Beard, 479
——, Shope papilloma, of rabbits, studied in Soviet Union. Shinkin and Shope, 915

Vitallium foil, tumors induced in rat by subcutaneous imbedding of. Oppenheimer, Oppenheimer, Danishefsky, and Stout, 439

Vitamin B$_2$, uptake of, by hamster methylcholanthrene-induced sarcoma and rat Walker carcinosarcoma. Miller, Gaul, Lemon, and Ross, 948

Vitamins, concentrations of thiamine and coenzyme A in normal and tumorous mouse tissues. Shils, Friedland, Fine, and Shapiro, 381
——, inhibition of growth of Sarcoma 180 by combinations of B$_2$-antagonists and acid hydrides, in mice. Brockman, Thompson, Schabel, and Skipper, 788
——, riboflavin in normal and tumor tissues of mouse, and effect of analog alone and in combination with other carcinostatic compounds. Shapiro, Dietrich, and Shils, 575

Walker 256 carcinosarcoma, amino acid requirements of, in tissue culture. McCoy, Maxwell, and Neuman, 979
——, comparison of phosphohexose isomerase and lactic dehydrogenase activities in plasma, liver, and tumor of rats bearing. Bodansky and Scholler, 894
——, concentration of lipids and water in skeletal muscle of rats bearing. Boyd and Crandall, 198
——, growth of, in uteri and other sites of rats. Homburger, Tregier, and Grossman, 106
——, growth rate of, in the rat. Migliarese and Bly, 128
——, hyperlipemia in rats bearing. Frederick and Begg, 548
——, lack of effect of overfeeding on weight of, in rats. Ingle, Altamero, and Flores, 437
——, limited response to propylthiouracil by rats bearing. Begg and White, 544
——, lipid and water levels in five organs of rats bearing. Boyd, Kelly, Murdoch, and Boyd, 853
——, metabolic pattern for pyruvate-2-C$^{14}$ with slices of. Busch, Goldberg, and Anderson, 175
——, rat, uptake of vitamin B$_2$, by. Miller, Gaul, Lemon, and Ross, 844

| Furth and Tullis, 5 |
| Zymosan, effect on transplantable human carcinoma of colon HR188 in weanling rats. | 1048 |
| Herbut and Kraemer, 1048 |
INSTRUCTIONS FOR AUTHORS

Manuscripts for Cancer Research must represent new and original contributions, not previously published, and, if accepted, not to be published elsewhere. They must be typed, double-spaced, with ample margins, on bond paper. The original and one carbon copy must be submitted. Manuscript pages should be numbered consecutively. Every paper must end with a brief, logical summary in which the points proved by the investigation are outlined.

Critical reviews on subjects dealing with cancer and allied fields will be considered for publication in Cancer Research. Such reviews should attempt to correlate the various approaches to a problem in a manner that will indicate the trends and emphasize the aspects that require further clarification. Critical analyses of the pertinent issues and expressions of opinions are encouraged. The reviews must not exceed 12 pages (10,000 words) in length, including references.

The title of the paper should be as short as is compatible with a clear indication of the subject matter. The title (with subtitle, if any) must not exceed 130 characters. Chemical formulas should not be included in the title. The title of the paper, the name of the author (or authors), location, and any acknowledgments should appear on a separate page.

Footnotes within the text should be numbered consecutively and should appear on a separate sheet.

Tables should be typed on separate sheets and should be numbered. Each must have a brief descriptive title. Tables should be arranged for vertical position on the page, either in single or double column. Every column must be supplied with an appropriate heading. A given set of data may be presented in either chart or tabular form, but not in both.

Illustrations: The preparation of photographs, charts, and graphs is particularly important, and authors are requested to follow very carefully the directions given below. Half-tone illustrations (photomicrographs and photographs) are designated figures and are printed as plates at the end of each article. Figures in moderate numbers will be accepted if they are of good technical quality and essential for the clarity of the presentation. Plates in color and excessive numbers of figures, if accepted, will be charged to the author. Only clear glossy photographs should be submitted. Mount all photographs on white cardboard so that the edges abut tightly together. The engraver will then draw a thin line between adjoining figures. Place as many together as will make a plate not to exceed 6 X 8½ inches. Each figure should include the appropriate number on a lower corner, and they should be numbered consecutively starting with Figure 1. Legends for plate figures should be typed separately in consecutive order on standard-sized paper with the heading "Legends for Figures."

Line cut illustrations (graphs and charts) are designated charts and are printed in the text. These should be numbered in consecutive order starting with Chart 1. Charts should be planned so as to eliminate waste space; they must be ruled off close to the area of the curves, and descriptive matter must not extend beyond the curves. Charts must be so prepared that no letter or figure will be less than 2 mm. high after reduction to the size in which it will appear. Generally they will be reduced to fit either the one- (8-inch) or two- (6-inch) column width of the page. Original line drawings on high quality white drawing paper or board, blue tracing cloth, or coordinate paper printed in blue should be used. Typewritten charts are not desirable, as they permit but slight reduction. Only India ink should be used for drawing or lettering. One set is sufficient. Legends for each chart should be typed separately in consecutive order on standard-sized paper with the heading "Legends for Charts."

Mounts of charts and photographs larger than 8½ X 11 inches will not be accepted. When original drawings exceed this size, photographed reductions must be sent.

References should include, in order: author, title, journal abbreviation (Quarterly Cumulative Index Medicus form), volume number in Arabic numerals, inclusive pages, and year. Book references should give: author, title, pages, edition number, city, publisher, and year. All references should be checked with the original publications and must be arranged in alphabetical order. Each number in the references is to refer to only one paper. References to unpublished work or personal communications must appear in footnotes. For examples of the correct style, refer to any current issue of Cancer Research.

Changes in proof: Any but minor changes from the manuscript which are made in proof will be billed to the author.

Reprints may be ordered before publication, at cost, according to a schedule of prices accompanying the galley proof of the article.

Manuscripts, reviews, and correspondence related to contributions should be addressed to: Dr. Harold P. Rusch, Editor, Cancer Research, McArdle Memorial Laboratory, University of Wisconsin, Madison 6, Wisconsin.

INFORMATION FOR SUBSCRIBERS

All subscriptions and business inquiries should be addressed to the publishers, The University of Chicago Press, 5750 Ellis Avenue, Chicago 37, Illinois.
