

INSTRUCTIONS FOR AUTHORS

Manuscripts for *Cancer Research* must represent new and original contributions, not previously published, and, if accepted, not to be published elsewhere. They must be typed, double-spaced, with ample margins, on bond paper. The original and one carbon copy must be submitted. Manuscript pages should be numbered consecutively. Every paper must end with a brief, logical *summary* in which the points proved by the investigation are outlined.

Critical reviews on subjects dealing with cancer and allied fields will be considered for publication in *Cancer Research*. Such reviews should attempt to correlate the various approaches to a problem in a manner that will indicate the trends and emphasize the aspects that require further clarification. Critical analyses of the pertinent issues and expressions of opinions are encouraged. The reviews must not exceed 12 pages (10,000 words) in length, including references.

The title of the paper should be as short as is compatible with a clear indication of the subject matter. The title (with subtitle, if any) must not exceed 130 characters. Chemical formulas should not be included in the title. The title of the paper, the name of the author (or authors), location, and any acknowledgments should appear on a separate page.

Footnotes within the text should be numbered consecutively and should appear on a separate sheet.

Tables should be typed on separate sheets and should be numbered. Each must have a brief descriptive title. Tables should be arranged for vertical position on the page, either in single or double column. Every column must be supplied with an appropriate heading. A given set of data may be presented in either chart or tabular form, but not in both.

Illustrations: The preparation of photographs, charts, and graphs is particularly important, and authors are requested to follow very carefully the directions given below.

Half-tone illustrations (photomicrographs and photographs) are designated *figures* and are printed as plates at the end of each article. Figures in moderate numbers will be accepted if they are of good technical quality and essential for the clarity of the presentation. Plates in color and excessive numbers of figures, if accepted, will be charged to the author. Only clear glossy photographs should be submitted. Mount all photographs on white cardboard so that the edges abut tightly together. The engraver will then draw a thin line between adjoining figures. Place as many together as will make a plate not to exceed $6 \times 8\frac{1}{2}$ inches. Each

figure should include the appropriate number on a lower corner, and they should be numbered consecutively starting with Figure 1. Legends for plate figures should be typed separately in consecutive order on standard-sized paper with the heading "Legends for Figures."

Line cut illustrations (graphs and charts) are designated *charts* and are printed in the text. These should be numbered in consecutive order starting with Chart 1. Charts should be planned so as to eliminate waste space; they must be ruled off close to the area of the curves, and descriptive matter must not extend beyond the curves. Charts must be so prepared that no letter or figure will be less than 2 mm. high after reduction to the size in which it will appear. Generally they will be reduced to fit either the one- (3-inch) or two- (6-inch) column width of the page. Original line drawings on high quality white drawing paper or board, blue tracing cloth, or coordinate paper *printed in blue* should be used. Typewritten charts are not desirable, as they permit but slight reduction. Only India ink should be used for drawing or lettering. One set is sufficient. Legends for each chart should be typed separately in consecutive order on standard-sized paper with the heading "Legends for Charts."

Mounts of charts and photographs larger than $8\frac{1}{2} \times 11$ inches will not be accepted. When original drawings exceed this size, photographed reductions must be sent.

References should include, in order: author, title, journal abbreviation (*Quarterly Cumulative Index Medicus* form), volume number in Arabic numerals, inclusive pages, and year. Book references should give: author, title, pages, edition number, city, publisher, and year. All references should be checked with the original publications and must be *arranged in alphabetical order*. Each number in the references is to refer to only one paper. References to unpublished work or personal communications must appear in footnotes. For examples of the correct style, refer to any current issue of *Cancer Research*.

Changes in proof: Any but minor changes from the manuscript which are made in proof will be billed to the author.

Reprints may be ordered before publication, at cost, according to a schedule of prices accompanying the galley proof of the article.

Manuscripts, reviews, and correspondence related to contributions should be addressed to: DR. HAROLD P. RUSCH, Editor, *CANCER RESEARCH*, McArdle Memorial Laboratory, University of Wisconsin, Madison 6, Wisconsin.

INFORMATION FOR SUBSCRIBERS

All subscriptions and business inquiries should be addressed to the publishers, THE

UNIVERSITY OF CHICAGO PRESS, 5750 Ellis Avenue, Chicago 37, Illinois.

BOOKS FROM CHICAGO

THE SCIENTIST'S LIBRARY

BONE: An Introduction to the Physiology of Skeletal Tissue

By Franklin C. McLean, M.D., and Marshall R. Urist, M.D.

This book is concerned with bone as a complicated tissue rather than with its mechanical function. The authors' approach is multidisciplinary, recognizing that bone has a complex physiology of its own which presents a whole series of challenges to all the medical sciences. "Very much needed to round out . . . the specialized knowledge of the chemist, clinician, anatomist, and pathologist."—Henry L. Jaffe, M.D., Hospital for Joint Diseases, New York. \$6.00

THE FOSSIL EVIDENCE FOR HUMAN EVOLUTION

By W. E. Le Gros Clark

A critical survey of fossil discoveries, demonstrating the evolutionary emergence of man, with an examination of the logical basis of conclusions derived from the fossil evidence. "A sensible, up-to-date, and clear exposition of the views of one of the most competent authorities. . . . A fundamental work which must be studied by anyone concerned with the origin of man."—George Gaylord Simpson, Chairman, Department of Geology and Paleontology, American Museum of Natural History. \$6.00

EXPERIMENTAL DESIGN AND ITS STATISTICAL BASIS

By D. J. Finney

Intelligible to the reader with little knowledge of statistics, this book discusses all aspects of experimental planning. The meaning and logic of experimental design are here emphasized to present the research biologist with principles for the efficient and economical construction of designs adaptable to particular objectives. "Expository in nature, rich in example, this work introduces concepts and principles with minimal use of symbolism. The author has achieved broad coverage in minimum space."—Robert F. Pfefferkorn, *American Scientist*. \$4.50
