

Reagan & Ng:

THE CELLS OF UTERINE ADENOCARCINOMA

Volume I, CLINICAL CYTOLOGY—A Series of Monographs under the general editorship of George L. Wied, M.D.

This book is the first in a new series of monographs designed to provide full and up-to-date coverage of the clinical, diagnostic, and basic aspects of specific fields of cytology. In clinical cytology it is no simple task to keep up with the advances in diagnostic cytology, let alone the basic cytologic research fields. Up until now, much of the teaching material has been provided by textbooks which, while excellent, cannot provide the space necessary for full coverage of specific topics. The preparation of a "handbook of cytology" was not feasible because the contents of this would be outdated by the time of publication. The monograph approach, it was decided, was the most logical and effective as it allows complete coverage of the latest developments.

A distinguished Board of Editors selected the topics for the monographs and invited competent authorities in various fields to present them. Several monographs will be published each year until the field is satisfactorily covered. Revised and amplified versions of previously published monographs will be prepared as new developments warrant.

CONTENTS OF VOLUME I: Introduction. The normal endometrium. Normal cells of endometrial origin. The pathology of endometrial adenocarcinoma. The cells of endometrial carcinoma. Cellular correlation with grade and extent of adenocarcinoma. The normal uterine cervix and its cells. The pathology of cervical adenocarcinoma. The cells of endocervical adenocarcinoma. Cells originating in extrauterine neoplasms. A comparative study of neoplastic cells. References.

A thorough, practical study . . .

Corscaden: GYNECOLOGIC CANCER, *3rd edition*

The importance of *early* diagnosis in the care and cure of female cancers is gaining recognition and acceptance by gynecologists, general practitioners, and the public. More than six million American women will have the Papanicolaou smear test this year. Yet, more than 40 million should have this test but do not—many of these women have never even heard of it.

Dr. James A. Corscaden shows great concern about this problem. Dr. Corscaden was one of the early advocates of early diagnosis and early treatment for cancers of the female reproductive organs. In his new third edition of *Gynecologic Cancer*, he explains in detail, tested methods of diagnosis and treatment, giving careful attention to new methods developed within the past decade. Evident throughout this book are Dr. Corscaden's broad knowledge of research in his subject and his long experience as both a surgeon and gynecologist.

He is perhaps best known for establishing the *Follow Up System* in the Surgical Department of the Presbyterian Hospital in New York City and for taking part in the development of the *Unit History System*, both of which have become standard in most hospitals. Dr. Corscaden established the Department of Radiotherapy at the Presbyterian Hospital and organized and took charge of the Tumor Clinic at the Sloane Hospital for Women.

He has collected many excellent x-rays, diagrams, and photomicrographs which he reproduces in *Gynecologic Cancer*. Dr. Edmund R. Novak concluded his highly favorable review in *Obstetrical and Gynecological Survey* of the second edition of this book with the following: "No finer summary or reference text can be found, but above all, it is an eminently well-balanced book with consideration of all means of therapy, but without any undue prejudice or bias. As such it is highly recommended to all doctors who see female patients."

CONTENTS: Introduction • Diagnosis • Cancer of the vulva • Cancer of the vagina • Cancer of the cervix • Cancer of the endometrium. Cancer of the myometrium • Neoplastic diseases of the chorion • Cancer of the fallopian tube • Cancer of the ovary • The menopause • Management of the cancer patient • The nature of cancer • Index.

By JAMES A. CORSCADEN, Ph.B., M.D., *Professor Emeritus of Clinical Gynecology*
College of Physicians and Surgeons, Columbia University
Attending Gynecologist, Sloane Hospital for Women, New York
