Paul:
CELL AND TISSUE CULTURE, 3rd ed.

The second edition of Dr. Paul's Cell and Tissue Culture has received widespread acclaim as the most complete, definitive, and up to date account of the techniques and applications of tissue culture available. Yet, the rapid developments in the field have necessitated still further revision. In his new edition the author has incorporated all recent accurate and noteworthy material. Because of increased interest in organ cultures and large scale cell cultures, there is now a chapter devoted to each of these topics. Some sections have been rearranged in a more logical format with a view to emphasizing the basic similarities in methods used for a wide variety of materials. Some outdated matter has given way to new, and the bibliographies have been extensively revised.

"This little manual represents the most up-to-date and comprehensive survey now available of the methods used to maintain cells and tissues outside the parent body. In small compass it offers a mine of practical information, and it is particularly excellent in point of view . . . the style is direct, simple and clear—an excellent thing in science. No other text on tissue culture has so wide or such well-balanced coverage . . .—American Scientist review of the 1st ed.

By John Paul, F.R.S.E., M.B., Ch.B., Ph.D., M.R.C.P.Ed., M.C.Path., Titular Professor in the Department of Biochemistry, University of Glasgow; Director, Tissue Culture Association Summer Course, 1957–60.

1965 384 pp., 159 figs. $8.75

INSTRUCTIONS FOR AUTHORS

Reports on observations in laboratory, clinical, or statistical cancer research and critical reviews, must be original and submitted exclusively to CANCER RESEARCH. Submit double-spaced typed original and 1 copy, complete with figures and charts, in English only, on 8½ x 11 inch paper.

Title and byline: Brief but informative. Author's name and institution on separate page; acknowledgments on another separate page.

Summary: Informative, 250 words or less, on separate page.

Text: Follow style and arrangement of recent issues. Type footnotes, numbered alphabetically, on a separate page. Follow Webster's International Dictionary in matters of spelling, punctuation and hyphenation. Follow Chemical Abstracts for chemical terms.

Tables: Should be numbered, typed on separate sheets, and arranged vertically. Title should be descriptive, all columns should have headings, abbreviations explained in footnotes to table, units of measure should be clear. Same data should not be repeated in charts.

Abbreviations: All organic, biochemical, and similar abbreviations used in the text must be explained fully and listed in a common footnote; a single text citation will then suffice.

Unit abbreviations, i.e., μg (not γ), mg, gm, μl, ml, °C, do not require a period. Use liter (no abbreviation), ml (not cc), and cu mm (not mm³). Distinguish clearly between millimole (mmole) and millimolar (mm). Use the style cholesterol-4-14C (not 14C-cholesterol).

Charts: Graphs, line-cut illustrations are printed in the text, numbered consecutively. They should be planned to be reducible, to a one-column width (3½ in.); lettering must be 2 mm (1/16 inch) or higher after reduction. Original line drawings in black India ink are preferred; glossy prints are acceptable, if sharp and black. Type legend for each chart on separate page.

Figures: Illustrations, photomicrographs, photographs are printed as plates at end of article. They must be clear and relevant; color plates are accepted only if essential and are paid for by author. Glossy, correctly trimmed photographs are mounted on white cardboard, 8½ x 11 in. the area for figures not to exceed 7½ x 9½ inches. Number each figure on plate. Legend for each figure is typed on separate pages, in consecutive order. Figures will be considered only if essential for the data.

References: Type double-spaced, numbered in alphabetical order of first author, giving author, title, journal, volume, inclusive pages, and year. For book references, give author, title, pages, edition number, city, publisher and year. Check all references. Follow Chemical Abstracts for abbreviations of journals. Unpublished data and personal communications are listed in parentheses in text, not in references.

Changes in proof: Any but minor changes from the manuscript made in proof will be billed to the author.

Reprints: Should be ordered before publication, according to a schedule of prices accompanying the galley proof of the article.

No responsibility is accepted by the Editors, by Cancer Research, Inc., or by the publishers of CANCER RESEARCH for opinions expressed by contributors.

Manuscripts and correspondence related to contributions should be addressed to: Dr. Michael B. Shimkin, Editor, Cancer Research, Fels Research Institute, Temple University School of Medicine, Philadelphia, Pennsylvania 19140.

Subscriptions and business inquiries should be addressed to the publishers, The Williams & Wilkins Co., 428 E. Preston St., Baltimore, Maryland, U.S.A., 21202.
New path to pathology study

Take steps to bring your research lab up to date with an NBCo exclusive: Puromycin Aminonucleoside...effective antitumor, antiparasite and antitrypanosome agent. An important new tool in research of renal pathology. Aminonucleoside has been proven effective against mammary adenocarcinoma in mice. Toxic activity against *Toxoplasma gondii* in tissue culture has been demonstrated. In this case, aminonucleoside caused total disintegration of the intracellular parasites without disintegration of the host cells.

Daily subcutaneous administration of aminonucleoside in rats resulted in nephrotic pathology closely resembling the nephrotic syndrome in children. Alterations of enzymatic activity in kidney tissue were also demonstrated in the course of aminonucleoside nephrosis. You can secure Puromycin Aminonucleoside only from NBCo. The antibiotic Puromycin Dihydrochloride is also available. This biochemical, though exhibiting properties similar to those of the aminonucleoside, is somewhat more active in the inhibition of purine and/or protein synthesis. In experiments with *E. coli*, for example, the final condensation of activated amino acids to peptides was prevented.

To order puromycin in either form, phone collect, 216-662-0212 (USA only). NBCo guarantees shipment within 60 minutes of your call. One day delivery anywhere in the continental United States; 80 hours anywhere in the world. Send for our free catalog containing more than 3000 items and our technical brochure listing a complete survey and bibliography of the work done on puromycin.

**PRICE SCHEDULE FOR PUROMYCIN AMINONUCLEOSIDE:**
