Contents

1625 Auditory Canal Structures in Rats as Altered by Aging and by the Administration of Tris(p-aminophenyl) carbammonium Pamoate. James L. Schardein and Donald H. Kaump.

1633 Significance of Newborn Age and Dose of Urethan in Leukemogenesis. S. D. Vesselinovitch and N. Mikhailovich.

1648 Aging and Cancerogenesis. III. Effect of Age on Isoantibody Formation. Tadao Aoki and Morris N. Teller.

1653 Induction of Dihydrofolate Reductase Activity by SV40 and Polyoma Virus. Peter M. Frearson, Saul Kit, and D. R. Dubbs.

1661 Action of 1-β-N-Arabinofuranosyl-5-fluorocytosine on the Nucleic Acid Metabolism and Viability of HeLa Cells. Jae Ho Kim, Maxwell L. Eidinoff, and Jack J. Fox.

1717 The Metabolism of 4-Nitroquinoline-1-Oxide, a Carcinogen. III. An Enzyme Catalyzing the Conversion of 4-Nitroquinoline-1-Oxide to 4-Hydroxyaminopuino-line-1-Oxide in Rat Liver and Hepatomas. Takashi Sugimura, Kazuo Okabe, and Mnako Naga.

1734 The Interconversion of Lactate and Pyruvate and Its Effect on the Apparent Oxidative Decarboxylation of These Substrates in Normal Tissue and Ascites Tumor Cells. Dale Ram, Ruth Navon, and Leah Bloch-Frankenthal.

1740 The Localization of Aminofluorene Sulfonic Acids-34S in Mouse Tumor and Host Tissues. Francis E. Ray and Krishna C. Agrawal.

Continued on reverse side

1759 The Pathology of Tumors and Other Lesions Induced in Rodents by Virus Derived from a Rat with Moloney Leukemia. F. C. Chesterman, J. J. Harvey, R. R. Dourmashkin, and M. H. Salaman.

1769 Modification of Radiosensitivity by Porphyrins. II. Transplanted Rhabdomyosarcoma in Mice. Leon Cohen and Samuel Schwartz.

1774 The Role of Sialic Acid in the Release of Proteins from L1210 Leukemia Cells. J. Leslie Glick, Allan R. Goldberg, and Arthur B. Pardee.

1778 Use of Lactate Dehydrogenase as a Marker in Rat-Mouse Chimera Studies. Louis V. Kaufman and K. Bruce Jacobson.

1787 Immunology of Spontaneous Mammary Carcinomas in Mice. V. Acquired Tumor Resistance and Enhancement in Strain A Mouse Infected with Mammary Tumor Virus. Mohammed A. M. Attia and David W. Weiss.

1826 Books Received.

**COVER LEGEND**

Erwin Frink Smith (1854–1927). Although he believed crown gall tumors, and perhaps also animal tumors, to be bacterial hyperplasias, he nevertheless was largely responsible for the isolation of Agrobacterium tumefaciens (Smith and Townsend) Conn, a soil microbe capable of inducing non-self-limiting tumors in many plant species. He described crown gall in 1907 (Science, 55: 671, 1907), and this remains an important model for experimental oncology. Smith was President of the American Association for Cancer Research in 1924–1925. The photograph of the daisy tumors appeared in Bull. U. S. Dept. Agrie. No. 213 (1911). The portrait is from a memoir of Smith (Nat. Acad. Sci., XXI, 1939). We are indebted to Dr. Jacques Liptz of Manhattan College for the material.
