A must for researchers . . . from McGraw-Hill

BIOLOGY OF THE LABORATORY MOUSE

Second Edition

The Jackson Laboratory, Earl L. Green, Ph.D., Editor

No animal has contributed more to the advancement of biological knowledge than the mouse. And no other source is as comprehensive a treatment of all aspects of mouse biology as this second edition. Nearly every chapter is rewritten and updated. Most of the thirty-one contributors are new. The authors, under the editorship of Dr. Earl L. Green, are all members of The Jackson Laboratory in Maine—an outstanding biomedical laboratory with one of the most complete banks of information on the mouse in the world. This edition records much previously unpublished information and recent innovations in studies made with mice.

700 pages, 7 1/4 x 9 7/8, 226 illus., plus 3 color plates, $16.50
DEVELOPMENTAL AND METABOLIC CONTROL MECHANISMS AND NEOPLASIA

The subject of the Nineteenth Annual Symposium on Fundamental Cancer Research, Developmental and Metabolic Control Mechanisms and Neoplasia, is broad and far reaching in scope. The present volume is a collection of the papers presented at this Symposium.

Fundamental investigations in this area of research have achieved exciting and rewarding results during the past several years. R. Lee Clark, in his most able introduction states, "This (the investigations) invites us to take a look at where all this is leading us. The outstanding researchers who have generously agreed to participate in this Symposium are those whose work brings renewed vigor to the study of developmental and metabolic control mechanisms".

The volume is divided into four topical sections and one special section; beginning with Erwin Chargaff's careful and definitive work, On Some of the Biological Consequences of Base-Pairing in the Nucleic Acids. This work is Dr. Chargaff's BERTNER Foundation Award lecture for 1965. The remaining sections in order are: Biosynthesis and Control Mechanisms, Molecular Basis of Early Development, Molecular Basis of Later Development and Control, Comparative Studies of Control Mechanisms in Normal and Neoplastic Tissues. The discussions held at the end of each presentation by the Symposium Committee have also been included in this excellent volume.

The sponsoring organization of this work, being dedicated to research, treatment and education in cancer are particularly interested in those areas of the Symposium where the relationship to cancer research is drawn in more detail. It is the desire of this organization (to quote further from Dr. Clark) that, "each of you will gain some idea, some fact, or some interest that will be of benefit to your treatment of the patient, if you serve in the clinic; of value to your teaching of future personnel for the war on cancer; if you serve as an educator; or of use in your experimentation, if you serve as a research scientist."

INSTRUCTIONS FOR AUTHORS

Papers on laboratory, clinical, or statistical cancer research and critical reviews must be original and submitted exclusively to CANCER RESEARCH. Submit an original and 1 copy (complete with 2 sets of illustrations) in English only, on 8½ x 11 inch paper, with double spacing throughout.

Titles: Concise and informative.

Summary: At the beginning of the article; 250 words or less. Autonomous; avoid extraneous abbreviations.

Text: For style and arrangement, consult a recent issue of CANCER RESEARCH; adhere carefully to this format. Use separate pages for: title, author(s), and affiliation; summary; references; footnotes; legends for illustrations; and acknowledgments. Follow Webster's International Dictionary for spelling, punctuation, and hyphenation. Follow Chemical Abstracts for chemical terms.

General: Simplified spelling is preferred, e.g., analog, biologic, pipet, technic. Numerals are spelled out only at the beginning of a sentence. Use 1st, 2nd (not first, second, etc.) when referring to a series. Use 0.03, not .03. For ranges, use 30–45 (not 30 to 45) days. Use the symbol % instead of percent. For isotopes, use the symbol P, 3H, and cholesterol-4-14C. Do not use ditto marks or extraneous dashes in tables. Decimals are preferred to fractions.

Abbreviations: Explain all organic, biochemical, and similar abbreviations used in the text fully, and list in a common footnote; a single text citation (not in Summary) will then suffice. Avoid extraneous abbreviations, e.g., short words. Unit abbreviations, e.g., mg, μl, ml, °C, etc., do not require a period.

The following abbreviations are preferred: ml (not cc or cm³); μg (not γ); μl (not λ); sq mm (not mm²); cu mm (not mm³); gm (not g); ≤ and ≥ (not ≤ and ≥); No. (not #).

Use Å; cpm, rpm, dpm; i.m., i.p., i.v., p.o., s.c.; hr, min, sec; mg/kg; mEq, IU; S.D., S.E.; Rv, HN2. Distinguish clearly between millimole(s) [mmole(s)] and millimolar (mM). Do not abbreviate liter(s) or inch(es).

Footnotes: Designate footnotes to the title page and text by consecutive superscript numerals; footnotes to the tables, by superscript letters (a, b, etc.).

References: In alphabetical order according to author, giving all authors, title, journal, volume number, inclusive pages, and year. (Follow Chemical Abstracts for abbreviations of journals.) Give the name of the journal for submitted papers. Papers in preparation or submitted for publication, unpublished data, and personal communications are cited parenthetically in the text or in footnotes.

For books, cite author, title, edition, publisher and city, editor(s) if any, and year. When citing specific chapters of a book, give both the title of the book and the chapter, as well as the above information. Verify all references.

Tables: Type tables on separate sheets, arrange vertically, and number using arabic numerals. Titles should be descriptive, and all columns must have headings. Abbreviations must be identified in a footnote. Do not repeat identical data in charts.

Charts: Number graphs and line-cut illustrations using arabic numerals; use large, bold numbers, letters, symbols, and lines. Original (vellum) line drawings (8 x 10 inches) in black India ink are preferred; glossy prints (5 x 7 inches) are acceptable if sharp and black. Supply a meaningful legend for each chart.

Figures: Photomicrographs and photographs must be clear, relevant, and essential. Color plates are accepted only if determined to be essential, and their expense must be assumed by the author.

Mount 1 set of figures on white cardboard; the total area utilized per plate should not exceed 7½ x 9½ inches. Number each figure directly, using arabic numerals. A legend for each figure is required; where applicable, supply stains and magnifications used, e.g., H & E, X 4000.

Changes in Proof: Any alterations from the original manuscript made in galley proof will be billed directly to the author. The editors reserve the right to reschedule or reschedule publication of papers if proofs require unreasonable changes or are not returned promptly.

Reprints: Should be ordered before publication according to a schedule of prices accompanying the galley proof.

No responsibility is accepted by the Editors, by Cancer Research, Inc., or by the publishers of CANCER RESEARCH for opinions expressed by contributors.

Manuscripts and correspondence related to contributions should be addressed to: Dr. Michael B. Shimkin, Editor, CANCER RESEARCH, Fels Research Institute, Temple University School of Medicine, Philadelphia, Pennsylvania 19140.

Subscriptions and business inquiries should be addressed to the publisher, The Williams & Wilkins Co., 428 East Preston Street, Baltimore, Maryland 21202.
Recently, hematoporphyrin derivative (H.D.) has been reported to be an important agent in tumor detection.

By utilizing H.D. and a proper activating and viewing system, one can detect malignancy by fluorescence. Hematoporphyrin tends to accumulate in tumors (1) and its red fluorescence can be utilized in the delineation of neoplastic tissue. (2).

Lipson, et al. have demonstrated that with a single intravenous dose of 0.05 mg/gm body weight of H.D., the tumor exhibited good differentiation within 3 hours after administration. They further report that the amount of H.D. required is well within the range of safety for the body. (3)

NBCo offers stat service on H.D. Phone collect 216-662-0212 (USA only). NBCo will process your order and guarantee shipment within 60 minutes of your call; one-day delivery anywhere in the continental USA, 80 hours anywhere in the world. Send for our free catalog containing more than 3000 items.
