COVER LEGEND

Two essential components of cancer research, studies on the natural history of cancer in man and the effects of treatment on the course of the disease, are represented in two classic contributions.

Alexandre von Winiwarter (1848–1916) of Belgium, affiliated with Theodor Billroth’s clinic of surgical pathology in Vienna, examined the end results of his mentor’s surgical experiences. He compiled these data into one of the first statistical reviews of operative results in cancer, especially of patients with mammary and gastric cancer (Beitrage zur Statistik der Carcinome, Enke, Stuttgart, 1878).

The photographs of Winiwarter and Greenwood, right and left respectively, were obtained from the New York Academy of Medicine Library, whose assistance is gratefully acknowledged.
