Contents

1791 Metabolic Effects of Cyclic 9-β-D-Arabino-
          furanosyladenine 3',5'-Monophosphate in
          L1210 Cells.
          Robert G. Hughes, Jr., and A. P. Kimball.

1795 Experimental Antitumor Activity and Pre-
          clinical Toxicology of Mycophenolic Acid.
          Martin J. Sweeney, Koert Gerzon, Paul N.
          Harris, Richard E. Holmes, Gerald A. Poore,
          and Robert H. Williams.

1803 Metabolism and Biochemistry of Mycophenolic
          Acid.
          Martin J. Sweeney, David H. Hoffman, and
          Michail A. Esterman.

1810 DNA Binding and Inhibition of DNA Synthesis
          after 7,12-Dimethylbenz(a)anthracene Admin-
          istered during the Early Prereplicative Phase in
          Regenerating Rat Liver.
          Hans Marquardt, Frederick S. Philips, and Aaron
          Bendich.

1815 Antitumor Effects of Polynucleotides and
          Theophylline.

1820 Immune Reactivity of Leukemia Patients to
          Autologous Blast Cells.
          Brigid G. Leventhal, Roger H. Halterman,
          Eugene B. Rosenberg, and Ronald B. Herberman.

1826 The Dedifferentiated Pattern of Enzymes in
          Livers of Tumor-bearing Rats.
          Annemarie Herzfeld and Olga Greengard.

1833 Incorporation of Uridine-3H and Sodium
          Acetate-14C in Lymphocytes Derived from
          Normal and Leukemic Individuals.
          Anil B. Mukherjee, Richard G. Waite, Maimon
          M. Cohen, and Robert Bernstein.

1837 Carbamyl Phosphate Hydrolysis in Rat Tissues
          and Tumors by an Alkaline Phosphatase.
          Annemarie Herzfeld and W. Eugene Knox.

1842 Aspartate Transcarbamylase Concentrations in
          Relation to Growth Rates of Fetal, Adult, and
          Neoplastic Rat Tissues.
          Annemarie Herzfeld and W. Eugene Knox.

1848 Therapeutic Efficacy of Cyclophosphamide as
          a Function of Inhibition of Its Metabolism.
          N. E. Sladek.

1855 Removal of Bound Carcinogen during DNA
          Repair in Nondividing Human Lymphocytes.
          Michael W. Lieberman and Anthony Dipple.

1861 Variation of Hepatic Malic Enzyme Capacity
          with Hepatoma Susceptibility in Mice of
          Different Genotypes.
          George L. Wolff and Henry C. Pitot.

1864 Serological Detection of Type C Viruses Found
          in Bovine Cultures.
          Jorge F. Ferrer, Luis Avila, and Neale D. Stock.

1871 Antigenic Comparison of Bovine Type C Virus
          with Murine and Feline Leukemia Viruses.
          Jorge F. Ferrer.

1878 Pattern of 2-Methyl-4-dimethylaminoazoben
          zene-binding Proteins in the Livers of Par-
          tially Hepatectomized Rats and of Continu-
          ously Dye-fed Rats in Comparison with 3'-
          Methyl-4-dimethylaminoazobenzene.
          Tsutomu Sugimoto and Hiroshi Terayama.

1884 The Effect of Route of Administration on the
          Distribution of Ellipticine in Mice.
          Chava T. Hardesty, Norita A. Chaney, and
          J. A. R. Mead.

1890 Mutagenicity of Chemical Carcinogens in
          Neurospora crassa.
          Tong-man Ong and F. J. de Serres.

1894 Metabolite Activation and Glycine Accumula-
          tion in Ehrlich Ascites Tumor.
          J. Bittner.

1900 Antigenic Alteration of Lymphoblastic Leu-
          kemic Cells Induced by Cell Culture and
          Hydrocortisone.
          G. Mark Kolimorgen, J. Clark Bundren, William
          A. Cain, and Raoul Carubelli.

1905 Effects of Derivatives of Cyclic 3',5'-Adenosine
          Monophosphate on the Growth, Morphology,
          and Gene Expression of Hepatoma Cells in
          Culture.
          Roeland van Wijk, Wesley D. Wicks, and
          Keith Clay.

1912 Antineoplastic Effect of Chlorpromazine in
          Chemical Carcinogenesis in the Hamster Cheek
          Pouch.
          Aaron Polliack and Itzhak S. Levij.

1916 Total-Body Hyperthermia versus Primary
          Tumor Hyperthermia in the Treatment of the
          Rabbit VX-2 Carcinoma.
          John A. Dickson and David S. Muckle.
One of the reasons for selecting Heidelberg—an ancient seat of learning—as the site for the Cancer Center was the prior existence of the above-mentioned Institut für experimentelle Krebsforschung and the Institute of Virus Research of the Community of the Federal States (Prof. Dr. K. Munk, Director). These institutes, still located within the old city of Heidelberg, were incorporated into the Center in January 1966. The five other institutes, i.e., the Institute of Experimental Toxicology and Chemotherapy (Prof. Dr. D. Schmid, Director), the Institute of Experimental Pathology (Prof. Dr. K. Goerttler, Director), the Institute of Biochemistry (Prof. Dr. E. Hecker, Director), the Institute of Documentation, Information and Statistics (Prof. Dr. G. Wagner, Director), and the Institute of Nuclear Medicine (Prof. Dr. H. Scheer, Director), are located in provisional buildings within the new university campus north of the Neckar River. All seven institutes are devoted primarily to basic cancer research. The final stage of the German Cancer Research, an eight-story building including faculty houses and providing space for eight institutes, has recently been completed and is scheduled to be opened officially on September 25, 1972, one day before the 82nd birthday of Professor Bauer. It will house the seven institutes already in existence as well as a new institute covering tumor immunology and tumor genetics.

The cover illustrates the final building of the German Cancer Research Center (lower left): background, the five provisional buildings of the Center; upper left, a photograph of Professor Czerny, circa 1906; and lower right, a 1968 photograph of Professor Bauer. The materials were obtained with the assistance of Professor E. Hecker, chairman of the Board of Directors (1970–71), and the late Professor H. Lettré, former Director of the Institut für experimentelle Krebsforschung in Heidelberg.
