Contents

Asterisks preceding the title refer to studies in humans.

2537 Carcinogenesis—Cellular Evolution as a Unifying Thread: Presidential Address.
Emmanuel Farber.

Munemitsu Hoshino and Leon Dmochowski.

2562 Energy-linked Functions of Tightly Coupled Mitochondria Isolated from Ehrlich Ascites Tumor Cells.
Rupert F. W. Thorne and Fyfe L. Bygrave.

2568 Selective Lethal Effect of Supranormal Temperatures on Mouse Sarcoma Cells.
Beppino C. Giovanna, Alton C. Morgan, John S. Stiehn, and Leo J. Williams.

2579 Effects of Whole Blood or Albumin Fraction from Tumor-bearing Rats on Liver Protein Synthesis.
Milton Toporek.

Gerald J. Goldenberg and B. K. Sinha.

2588 Paramagnetic Changes during Development of a Transplanted AKR/J Leukemia in Mice as Measured by Electron Spin Resonance.

2596 Perturbation of Leukemic Cell Population in AKR Mice Due to Chemotherapy.
Mitsubishi Omine and Seymour Perry.

2603 Seroepidemiological Studies on Carcinoma of the Nasopharynx.

2609 Quantitative Estimations of RNA Sensitive to Mild RNase Treatment in Sections of Normal, Regenerating, and Neoplastic Rat Livers.

2615 Augmentation of Chemotherapeutically Induced Remission of a Murine Leukemia by a Chemical Immunoadjuvant.

2619 Experimental Antitumor Activity of Pyrazomyacin.
Martin J. Sweeney, Fred A. Davis, Gerald E.

* Specific Glucocorticoid Binding in Human Hemopoietic Cell Lines and Neoplastic Tissue.

Kinetics of the Lethal Effect of Actinomycin D on Normal and Leukemic Cells.
Frederick Valeriote, Teresa Vietti, and Sandra Tolens.

2662 Delayed Hematological Recovery after Cyclophosphamide Treatment in the Presence of an Advanced Tumor.
William D. DeWys and James M. Mansky.

2668 Senescent Loss of Resistance to Murine Sarcoma Virus (Moloney) in the Mouse.
Nelson H. Pazmiño and John M. Yuhas.

2673 Absence of Aminonucleoside-sensitive Steps in the Cell Cycle of SV40-transformed Human Fibroblasts.
John F. Gierthy and George P. Studzinski.

2677 Blastogenic Response of Lymphoid Cells to Tumor Cells or Tumor Membrane Extracts in Vitro.
S. P. Poon and M. N. Cauchi.

2683 * Abnormalities of Platelet Function in Patients with Polycythemia Vera.
Sam Berger, Louis M. Aledort, Harriet S. Gilbert, John P. Hanson, and Louis R. Wasserman.

2688 The Binding of Abrin and Ricin by Ehrlich Ascites Tumor Cells.
Analysis of Tissue Esterases from Patients with Hodgkin’s Disease and Other Types of Advanced Cancer by Isoelectric Focusing in Acrylamide Gel.

Charles W. Young and Edward S. Bittar.

Effects of Varying the Exposure to Phenobarbital on Its Enhancement of 2-Acetylamino-fluorene-induced Hepatic Tumorigenesis in the Rat.

Carl Peraino, R. J. Michael Fry, Everett Staffeldi, and Walter E. Kisielski.

In Vitro Binding of $^{65}$Ga to L1210 Cells.

Some Properties of Adenyl Cyclase from Ehrlich Tumor Cells.

Björn E. Wikström and Gunnar K. Agren.

The Content of the Principal Protein Target of a Hepatic Carcinogen in Liver Tumors.

David M. Mott, Brahma P. Sani, and Sam Sorof.

The Effects of Counting Threshold and Emulsion Exposure Duration on the Percent-labeled Mitosis Curve and Their Implications for Cell Cycle Analysis.

S. E. Shackney, S. S. Ford, and A. B. Wittig.

The Response of Synchronized Human Lymphoma Cells to Bleomycin and 1,3-Bis(2-chloroethyl)-1-nitrosourea.

B. Drewinko, Barry W. Brown, and J. A. Gottlieb.

Two-Dimensional Gel Electrophoresis of Acid-soluble Nucleolar Proteins of Walker 256 Carcinosarcoma, Regenerating Liver, and Thioacetamide-treated Liver.

N. Raghuvendra Ballal and Harris Busch.

Methylhydrazine Tumorigenesis in Syrian Golden Hamsters and the Morphology of Malignant Histiocytomas.

Bela Toth and Hidesuke Shimizu.

A Growth-stimulating Factor Released by Cultured Mouse Mammary Tumor Cells.

B. K. Nair and K. B. DeOme.

Isolation and Characterization of Plasma Membranes from Human Leukemic Lymphocytes.

D. Marigue and J. Hildebrand.

Spontaneous Tumors in Sprague-Dawley Rats and Swiss Mice.

Elevated Sterol Synthesis in Lymphocytic Leukemia Cells from Two Inbred Strains of Mice.

In Vitro Transformation of Submandibular Gland Epithelial Cells and Fibroblasts of Adult Rats by Methylcholanthrene.

Ashley M. Brown.

Collagenolytic Activities of Squamous Cell Carcinoma of the Skin.

Ken Hashimoto, Yuji Yamanishi, Edgar Maeyens, Mustafa K. Dabbous, and Tamotsu Kanzaki.

Distribution of Radioactivity and Metabolism of Formic Acid 2-[4-(5-Nitro-2-furyl)-2-14C-2-thiazolyl]hydrazide following Oral Administration to Rats and Mice.

Samuel M. Cohen, Arthur Alter, and George T. Bryan.

N-Demethylation of the Antineoplastic Agent Hexamethylmelamine by Rats and Man.

John F. Worzalla, Bruce M. Johnson, Guillermo Ramirez, and George T. Bryan.

Distribution of Kinase and Deaminase of 1-β-d-Arabinofuranosylecytosine in Tissues of Man and Mouse.

Dah Hsi Wang Ho.

The Blood Group A-like Site on the Carcino-embryonic Antigen.

J. Michael Gold and Phil Gold.

Adenosine Formation and Metabolism during Adenosine Triphosphate Catabolism in Ehrlich Ascites Tumor Cells.

Christopher A. Lomax and J. Frank Henderson.

Reversal by Melatonin of the Effect of Pinealectomy on Tumor Growth.

Effects of Camptothecin on the Breakage and Repair of DNA during the Cell Cycle.

Susan B. Horwitz and Marshall S. Horwitz.

Binding of $^{3}$H-Labeled Benzo[a]pyrene to DNA in Hamster Tracheal Epithelial Cells.

David G. Kaufman, Valerio M. Genta, Curtis C. Harris, Joseph M. Smith, Michael B. Sporn, and Umberto Saffiotti.

Localization of Benzo[a]pyrene-3H and Alterations in Nuclear Chromatin Caused by Benzo[a]pyrene-Ferric Oxide in the Hamster Respiratory Epithelium.

Curtis C. Harris, David G. Kaufman, Michael B. Sporn, Hollis Boren, Frank Jackson, Joseph M. Smith, Judith Pauley, Paul Dedick, and Umberto Saffiotti.

The Effect of Bleomycin on Survival and Tumor Growth in a C3H Mouse Mammary Carcinoma.

Muneyasu Urano, Nobuo Fukuda, and Sachiko Koike.

The Role of Thymidylate Synthetase Inhibitors in Bromodeoxyuridine-induced Neoplasia in Drosophila.

Rose M. Risiki and T. M. Risiki.

Changes in Glycosaminoglycans of AH-130 Ascites Tumor after Treatment with Ciclophosphamide and Vitamin A.

Toshikiko Suematsu, Nobuto Nakamura, Takekoba Kamada, and Hiroshi Abe.

Inhibition of Purine Nucleotide Metabolism by 6-Methylthiopurine Ribonucleoside and Structurally Related Compounds.

2972 The Basis for the Disparate Sensitivity of L1210 Leukemia and Walker 256 Carcinoma to a New Triazine Folate Antagonist.

2977 Localization of Human GW-39 Tumors in Hamsters by Radiolabeled Heterospecific Antibody to Carcinomaembryonic Antigen.

2983 Microsomal Metabolism of Dimethylnitrosamine and the Cytochrome P-450 Dependency of Its Activation to a Mutagen.
Peter Czygan, Helmut Greim, Anthony J. Garro, Ferenc Hutterer, Fenton Schaffner, Hans Popper, Otto Rosenthal, and David Y. Cooper.

2987 Free Amino Acids in E.L.4 Mouse Ascites Tumor Cells Taken from Susceptible (C57BL) and Resistant (B10.D2) Mice.
John Wein, Eugene Roberts, Michael Fox, and Constance Weinstein.

2993 Combined Enzyme Histochemical and Radiograph Studies on Areas of Hyperplasia in the Liver of Rats Fed N-2-Fluorenylacetamide.
Tomoyuki Kitagawa and Haruo Sugano.

3002 * Replication of an Avian Myxovirus in Primary Cultures of Human Leukemic Cells.
Christian Sauter, Ursula Baumberger, Susanne Ekenbark, and Jean Lindenmann.

3008 * Ultrastructural Studies on Regan and Non-Regan Isoenzymes of Alkaline Phosphatase in Human Ovarian Cancer Cells.
Mitsuo Sasaki and William H. Fishman.

3019 Effects of Riboflavin Deficiency upon Concentrations of Riboflavin, Flavin Mononucleotide, and Flavin Adenine Dinucleotide in Novikoff Hepatoma in Rats.
Richard S. Rivlin, Rebecca Hornibrook, and Martha Osnos.

3024 * Chemotherapy of Malignant Lymphoma with Adriamycin.
Jeffrey A. Gottlieb, Jordan U. Guterman, Kenneth B. McCredie, Victorio Rodriguez, and Emil Frei, III.

3029 In Vivo and in Vitro Evaluation of Immune Response of Hamsters to Immunization and Transplants of Autochthonous Reticulum Cell Sarcoma.
Mariette J. Gerber and Eric R. Brown.

3036 * Topical Immunotherapy of Basal Cell Carcinomas with Dinitrochlorobenzene.

3043 Follow-up of American Cancer Society Postdoctoral Fellowship and Faculty Research
Aflatoxin is a historical landmark in chemical carcinogenesis. It is a potent environmental carcinogen from "natural" sources rather than from industrial contaminants or synthetic chemistry.

In 1961, there occurred two epizootic outbreaks. In England, thousands of turkey poults, ducklings, and chicks died of hepatic necrosis. In the northwestern United States, rainbow trout, the favorite game fish of the region, died with hepatomas. Initially, there was no evident relationship between these outbreaks (cf. Advan. Cancer Res., 8: 191, 1964).

The fowl epidemic of hepatotoxicity was traced quickly to food sources, then to peanut meal, and finally to the contamination of the food by a common fungus, Aspergillus flavus. M. C. Lancaster, F. P. Jenkins, and J. McL. Philp, of the Unilever Laboratories in England, fed rats with food containing the toxic material and, in 6 months, 9 of 11 survivors developed hepatomas (Nature, 192: 1095, 1961).

Two teams of chemists, one in England (Nature, 195: 1062, 1962) and the other in the United States (J. Am. Chem. Soc., 85: 1706, 1963), isolated and identified the active chemicals, the aflatoxins (A. flavus toxins). These compounds, on a molecular-weight basis, are among the most active hepatocarcinogens in the rat; they produce sarcomas at the site of s.c. injection and have other carcinogenic effects.

Hepatomas in trout also were rapidly related to food sources. Fractionation of fish diets for the carcinogen was initiated by John E. Halver at the Western Fish Nutrition Laboratory of the United States Department of Interior at Cook, Washington. Isolation of aflatoxin from A. flavus contamination of poultry food kept under warm, humid conditions pointed to this possibility of a similar etiology of trout hepatomas.

To test this relationship, concurrent experiments were arranged. Hepatomagenic fish diets were sent to Gerald N. Wogan at the Massachusetts Institute of Technology, Cambridge, Massachusetts, for analysis for aflatoxin, and aflatoxin was likewise sent to Dr. Halver for feeding to trout. Crystalline aflatoxin B, prepared by Wogan produced hepatomas in rainbow trout, and there was an almost perfect relationship between the appearance of hepatomas in trout and the aflatoxin content in the food (J. E. Halver and I. A. Mitchell, eds. In: Trout Hepatoma. Research Conference Paper 70, United States Department of the Interior, Bureau of Sports, Fisheries and Wildlife, Washington, D. C., 1967). Hepatomas were later produced in the rat and duckling.

Epidemiological investigations in Africa by M. E. Alpert et al. (Cancer, 28: 253, 1971) and in Thailand by R. C. Shank et al. (Food Cosmet. Toxicol., 10: 171, 1972) show correlations between the prevalence of hepatoma in man and the aflatoxin levels in the food. Aflatoxicosis thus appears to be an important environmental carcinogenic hazard in man.

The historical events and developments are presented in Mycotoxins in Foodstuffs (MIT Press, Cambridge, Mass., 1964).

Pictured are M. C. Lancaster, b. 1930 (upper left), John E. Halver, b. 1922 (right), and Gerald N. Wogan, b. 1930 (lower left), who are among the many key investigators of aflatoxin, especially its carcinogenic aspects. The structural formula of aflatoxin B, and a photomicrograph of a trout hepatoma are also included.
