</table>
590 1'-Hydroxysafrole, a Proximate Carcinogenic Metabolite of Safrole in the Rat and Mouse. Peter Borchert, James A. Miller, Elizabeth C. Miller, and Thomas K. Shires.

606 Carcinoma after Malignant Conversion in Vitro of Epithelial-like Cells from Rat Liver following Exposure to Chemical Carcinogens. G. M. Williams, J. M. Elliott, and J. H. Weisburger.

613 Early Appearance of Serum α-Fetoprotein as a Function of Dosage of Various Hepatocarcinogens.

COVER LEGEND

Research institutions in Japan have the charming custom of holding memorial services for their experimental animals. Services are usually held in the auditorium or lecture hall, during the spring and autumn equinox. The equinoxes are national holidays and in Buddhism are devoted to memorial services of various kinds. Some organizations have set up a monument to the spirit of experimental animals, and the ceremony is held before the monument. Illustrated is the monument to experimental animals at the Hikari Plant of the Takeda Research Laboratories. On the monument is written “Born as animals, they have offered their body for revelation of medical science. A memorial is here set up to honor their souls.” This memorial was written by Hon. Saeki, the chief priest of Hōryuji Temple in Nara. The ceremony, also pictured, is usually conducted by a Buddhist priest according to usual Buddhist rites, with chanting of Sutra and burning of incense. This is followed by burning of incense by all present. The ceremony is attended by all members of the organization. We are indebted to Dorothy U. Mizoguchi of the Information Center of the Japanese Foundation for Cancer Research, Tokyo, for the photographs and information.
