Mike Finamore was told he had leukemia. Nine years ago.

When Mike Finamore was thirteen years old, he was told he had leukemia. At that time, this meant he had five, maybe six months, to live. But just about then, leukemia research produced some dramatic results: A special combination of drugs that would kill the leukemia cells in the blood and permit the person to live longer than ever before.

So Mike was treated. And it worked.

He didn't die. Instead, he became one of the fortunate few to have leukemia and live. And today his weekly treatments enable him to lead a normal life. In fact, right now he's putting the roof on a house he built himself. And when it's finished there will be a double celebration: The new house. And Mike's 22nd birthday.

Most people expect presents. Mike's happy just to have a birthday.

We want to wipe out cancer in your lifetime. Give to the American Cancer Society.
