Contents

Asterisks preceding the title refer to studies in humans.

1141 Survival Kinetics of Cultured Human Lymphoma Cells Exposed to Adriamycin.
Benjamin Drewinko and Jeffrey A. Gottlieb.

1146 Potentiation of Rifampicin, Rifampicin Analogs, and Tetracycline, against Animal Cells by Amphotericin B and Polymyxin B.

1150 Bioassay and Relative Cytotoxic Potency of Cyclophosphamide Metabolites Generated in Vitro and in Vivo.
N. E. Sladek.

John D. Scribner and Norma K. Naimy.

1165 Intracisternal Type A Particles Occurring in Foreign Body-induced Sarcomas.

1169 A Comparative Study of Some Properties of Chromatin from Two "Minimal Deviation" Hepatomas.
Eugene A. Arnold, Mary Margaret Buksas, and Keith E. Young.

1177 Serum Immunoglobulin Content in Normal and Lymphoid Tumor-bearing Xenopus laevis.
Irandokht Hadji-Azimi.

1183 Coenzymes Q Levels in Liver, Spleen, and Blood of Mice with Friend Leukemia Virus Infection.
Adria Catala Casey and Emile G. Bliznakov.

1187 DNA Polymerases I and II in Regenerating Rat Liver and Morris Hepatomas.
Earl F. Baril, Murphy D. Jenkins, Oliver E. Brown, John Laszlo, and Harold P. Morris.

1194 Altered Populations of Acidic Chromatin Proteins in Breast Cancer Cells.
Nobuyuki Kadokama and Roger W. Turkington.

1202 * Leukocyte Purine Phosphoribosyltransferases in Human Leukemias Sensitive and Resistant to 6-Thiopurines.
Martin Rosman and Hibbard E. Williams.

1210 Isolation and Partial Characterization of Multiple DNA Polymerases of the Murine Myeloma, MOPC-21.

1217 A Study of the Mechanism by Which Anticoagulation with Warfarin Inhibits Blood-borne Metastases.
J. Martin Brown.

1225 Effect of the Urine and Calculus Formation on the Incidence of Bladder Tumors in Rats Implanted with Paraffin Wax Pellets.
Warren H. Chapman, Dieter Kirchheim, and J. William McRoberts.

1230 * Phagocytic Activity of the Leukemic Cell and Its Response to the Phagocytosis-stimulating Tetrapeptide, Tuftsin.

1235 Enzyme Activities in Regressing Estrone-induced Mammary Tumors of the Rat.
J. Harry Cutts.

1238 Viropexis of Type B Particles in Reticulum Cell Sarcoma of RIII/Dm Strain Mice.
Gabriel Seman and Leon Dmochowski.

1247 Effects of Diethylstilbestrol on Hybridizability of Mouse Testicular RNA.
Kiyoshi Kotok, Robert A. Huseby, Alberto Baldi, and Leo T. Samuels.

1253 Protection of LS178Y Lymphoblasts by Choline and Ethanolamine against Cytocidal Effect of Nitrogen Mustard in Vitro.
Gerald J. Goldenberg and B. K. Sinha.

1265 Studies on the Mode of Action of 2,2'-Anhydro-1,2'-arabinofuranosylcytosine.
M. C. Wang, R. A. Sharma, and A. Bloch.
Rhoads was born in Springfield, Massachusetts, completed his medical education at Harvard School of Medicine in 1924, and, following training in pathology, joined the research staff of the Rockefeller Institute for Medical Research in New York. In 1940 he succeeded James Ewing as Director of the Memorial Hospital for Cancer and Allied Diseases in New York City. During World War II he served in the United States Army Chemical Warfare Service. Under the cloak of wartime secrecy, nitrogen mustard was shown to have therapeutic effects in patients with leukemia and lymphoma. This led to the exploration of therapeutic effects of many analogs of nitrogen mustard and related chemicals developed for warfare and subsequent synthesis of many other alkylating chemicals.

Rhoads was initiated by Cornelius Packard Rhoads (1898-1959) in New York during the 1940's. Following the war, the Sloan-Kettering Institute by Dr. C. Chester Stock became the Director of the subsidiary Donald S. Walker Laboratory in Rye, New York, as well as a Vice-President of the Institute.

Dr. Kanematsu Sugiura became head of the Tumor Section of the chemotherapy program, with responsibility in the bioassay procedures. A native of Japan, Sugiura was brought to the United States in 1905, and his subsequent education and career developed in New York, in close association with many of the cancer research programs that evolved in the city. Sugiura's contributions to experimental cancer chemotherapy extend back to 1912 and are recorded in his many publications.

While he has been considered a "Jack of all trades" insofar as his talents and interests are concerned, his most important work has been focused on tumor transplantation, the effects of radiation in experimental tumor systems, frozen experimental tumors, and enzymes (particularly lipase) in tumors and normal tissue.

Rhoads is pictured on the left, Stock on the upper right, and Sugiura on the lower right. We are indebted to Dr. C. Chester Stock and Dr. Morris J. Hutchison of the Sloan-Kettering Institute for the illustrations and information, and Claire Yaffa, who photographed Dr. Sugiura.
