Contents

Asterisks preceding the title refer to studies in humans.

1 Photonscan Localization of GW-39 Tumors in Hamsters Using Radiolabeled Anticarcinoembryonic Antigen Immunoglobulin G.
David M. Goldenberg, David F. Preston, F. James Primus, and Hans J. Hansen.

10 Protective Effect of Benzoflavone and Estrogen against 7,12-Dimethylbenz(a)anthracene- and Aflatoxin-induced Cytotoxicity in Cultured Liver Cells.
Arthur G. Schwartz.

27 * A Phase 2 Evaluation of l-(2-Chloroethyl)-3-(4-methylcyclohexyl)-l-nitrosourea (NSC 95441) in Patients with Advanced Breast Cancer.

31 Comparison of Surface Material, Cytoplasmic Filaments, and Inter cellular Junctions from Untransformed and Two Mouse Sarcoma Virus-transformed Cell Lines.
Gerald B. Dermer, John Lue, and Harry B. Neustein.

39 Studies on the Mechanism of Resistance to Lymphocytolysis Induced by Corticosteroids.
Roger W. Turnell and Albert F. Burton.

43 * Heterotransplantation Model of Human Malignant Melanoma.
Bijay Mukherji, Arlene Flowers, Larry Nathanson, and David A. Clark.

47 The Relationship of Lysozyme to the Nephropathy in Chloroleukemic Rats and the Effects of Lysozyme Loading on Normal Rat Kidneys.
Matth Klockars, Henry A. Azar, Riccardo Hermida, Takashi Isobe, Clement C. S. Hsu, Harriett Ansari, and Elliott F. Osserman.

61 Immunological Resistance to Pulmonary Metastases in C3Hf/Bu Mice Bearing Syngeneic Fibrosarcoma of Different Sizes.
Luka Milas, Nancy Hunter, Kathy Mason, and H. Rodney Withers.

72 Enhancement of Adenovirus Transformation by Treatment of Hamster Embryo Cells with Diverse Chemical Carcinogens.
Bruce C. Casto, William J. Pieczynski, and Joseph A. DiPaolo.

79 Chromosomal Heterogeneity in the RAG and MSWBS Mouse Tumor Cell Lines.
Shahnaz Hashmi, Penelope W. Allerdice, George Klein, and Orlando J. Miller.

89 Time Course of Tissue Water Proton Spin-Lattice Relaxation in Mice Developing Ascites Tumors.

92 Inhibitory Effect of Manganese upon Muscle Tumorigenesis by Nickel Subsulfide.

96 Dietary Enhancement of Nitrosamine Carcinogenesis.
Adrienne E. Rogers, Oscar Sanchez, Fred M. Feinsod, and Paul M. Newberne.

100 Relationship of Antigenicity of Melanoma Cells Grown in 5-Bromodeoxyuridine to Reduced Tumorigenicity.
Selma Silagi, Elizabeth W. Newcomb, and Marc E. Weksler.

105 A Comparison of Three in Vivo Assays for Cell Tumorigenicity.
John C. Petricciani, Roslyn E. Wallace, and Donald W. McCoy.

109 Polyadenylate-containing RNA of Polyribosomes Isolated from Rat Liver and Morris Hepatoma 7800.
John W. Tweedie and Henry C. Pitot.

115 * In Vitro Immunization to Cultured Human Tumor Cells.
Brahma Sharma and Paul J. Terasaki.

119 The Effect of Dietary Protein Deficiency on the Ability of Isolated Hepatic Microsomes to Alter the Mutagenicity of a Primary and a Secondary Carcinogen.
Peter Czygan, Helmut Greim, Anthony Garro, Fenton Schaffner, and Hans Popper.

124 Selective Alteration of Immunocompetence with Methotrexate and 5-Fluorouracil.

129 Radiation-induced Changes in Established Tumor Immunity.

138 Cell-mediated Immune Response of Hamsters to Alloantigens and Tumor Antigens of Isologous and Autochthonous Origin during Chemical Carcinogenesis.
A. K. Szakal and M. G. Hanna, Jr.
COVER LEGEND

This month's cover features Alexander Lipschutz and Rigoberto Iglesias, longtime collaborators in the study of endocrine tumorigenesis at the Instituto de Medicina Experimental in Santiago, Chile.

Alexander Lipschutz (b. 1883, Riga, Latvia) received his M.D. in 1907 in Göttingen, West Germany. After serving as professor of physiology at Tartu, Estonia (now Russia), he moved to Chile in 1926. In 1907 in Göttingen, West Germany. After serving as professor of physiology at Tartu, Estonia (now Russia), he moved to Chile in 1926. In 1926, he became professor of physiology and Dean of the Faculty of Medicine at the new University of Concepción. Lipschutz again moved in 1937, when the directorship of the Chilean National Health Service's Instituto de Medicina Experimental was offered to him. Although he retired as director of the Institute in 1960, he has continued actively as an honorary member.

Lipschutz and his colleagues demonstrated in their work that the portrait of Lipschutz (left) was taken ca. 1945 and that of Iglesias (right) in 1966.

Although he retired as director of the Institute in 1960, he has continued actively as an honorary member.

Lipschutz and his colleagues demonstrated in their work that the portrait of Lipschutz (left) was taken ca. 1945 and that of Iglesias (right) in 1966.

We are indebted to Dr. Iglesias for the photographs and information. The portrait of Lipschutz (left) was taken ca. 1945 and that of Iglesias (right) in 1966.

Not a great help. Thus, he returned in 1942 to the Instituto de Medicina Experimental in Santiago, where his investigations with Professor Lipschutz continued. In 1960, Iglesias succeeded Lipschutz as director and proceeded with his research of endocrine carcinogenesis, with intervals of study in the United States.

Since 1950, Iglesias has concentrated on transplantable endocrine tumors of the A × C rat, starting with a functional ovarian tumor found in Albert Segaloff's laboratory at the Ochsner Foundation in New Orleans. This tumor was still functional in 1972. The collection facing some difficult years, the institute is recovering and recently was selected as an International Cooperating Center for Cancer Research by the World Health Organization.

We are indebted to Dr. Iglesias for the photographs and information. The portrait of Lipschutz (left) was taken ca. 1945 and that of Iglesias (right) in 1966.
