# It's hard to sleep nights when you know what we know.

Thousands of cancer patients will die needlessly this year because they did not go to the doctor in time.

If detected early and treated promptly, half of all cancers could be cured. What do we do about this?

Everything humanly possible, and more.

We mobilize two million dedicated volunteers; doctors, scientists, nurses, businessmen, union leaders, housewives — people from all

walks of life. We invest millions

in research to find a cure for leukemia and

other forms of cancer. We alert the public to vital facts about cancer, using every means of communication.

We institute special public education programs in business offices and factories. We help doctors keep up with new developments in cancer diagnosis and treatment, with journals, films and seminars.

We transport cancer patients to treatment centers and educate their families in ways to care for the stricken.

What can you do? First of all, have a health checkup.

Then make time for good deeds and help us in the fight against cancer. American Cancer Society
