Meeting Highlights: American Cancer Society / National Cancer Institute Conference National on Cancer Research and Clinical Investigation

A Professional Education Audio Tape

On these two 60-minute cassettes, taped at a 2½-day conference held in September 1976, a multidisciplinary team of experts discuss cancer etiology, immunology, radiology, pharmacology, and combined modalities. A Table of Contents provides a guide for locating individual topics and speakers.

The tape is recommended for physicians, medical students, and allied health professionals, and may be borrowed from your local Division of the American Cancer Society.
