The winners for 1979 were:

- Henry S. Kaplan, M.D., Director of the Cancer Research Biology Laboratories, Stanford University, Stanford, California, received the Charles K. Kettering Prize for his leadership in the national development of a therapeutic program which changed Hodgkin's disease from an almost invariably fatal illness to a highly curable one.

- Sir Richard Doll, M.D., Regius Professor of Medicine, Master of Green College, Oxford University, England, received the Charles S. Mott Prize for his leadership in the development of knowledge concerning the environmental causes of cancer in humans.

- George Klein, M.D., Professor of Tumor Biology, Karolinska Institute, Stockholm, Sweden, received the Alfred P. Sloan, Jr. Prize for his pioneering work on the interrelation of cancer and the immune system in mammalian species, including human cancer.

The awards were given on May 2, 1979 during a dinner held at the State Department in Washington, D. C.

Pictured are Professor Kaplan (top), Professor and Mrs. Doll (center), and Professor and Mrs. Klein (bottom).

Cancer Research joins in congratulating the recipients, all well known to and honored by the cancer research community and all members of the American Association for Cancer Research.

M.B.S.
