Timely, wide-ranging, authoritative, concise... 

Cancer Cells: A Monthly Review makes its debut at a time of great excitement in cancer research—a time marked by the transfer of molecular technology from the laboratory to the clinic. But if molecular biology is to have a real impact on clinical oncology, there must be an open and frequent exchange of ideas between basic research scientists and the physicians who diagnose and treat the disease. Cancer Cells provides a forum for this dialogue and will be a unique contribution to the body of cancer literature. Each month, leading scientists and clinicians will review and comment on research developments that are stimulating new approaches to cancer prevention, diagnosis and therapy.

To meet this challenge, the scope of Cancer Cells is broad, encompassing elements of biochemistry, endocrinology, epidemiology, experimental therapeutics, genetics, immunology, molecular and cell biology, preclinical pharmacology, and virology.

A distinguished team of Advisory Editors, each of whom offers a slightly different perspective on the cancer cell, guides the journal toward topics that merit the attention of a wider audience.

EDITOR     P.A. Kiberstis
MANAGING EDITOR     J. Cuddihy

THE AMERICAN ASSOCIATION FOR CANCER RESEARCH ANNOUNCES

AACR Special Conference in Cancer Research

STEROID RECEPTORS, TRANSCRIPTION FACTORS, AND GENE EXPRESSION

February 10–13, 1990
Catamaran Resort Hotel, San Diego, California

PROGRAM COMMITTEE
Bert W. O'Malley, Chairperson
Ronald M. Evans    Marc E. Lippman

OVERVIEW
I. Herskowitz, San Francisco, CA
W. McGuire, San Antonio, TX

STEROID HORMONE RECEPTORS
R. Evans, San Diego, CA
B. O'Malley, Houston, TX
P. Chambon, Strasbourg, France
H. Samuels, New York, NY

TRANSCRIPTION FACTORS
R. Roeder, New York, NY
R. Tjian, Berkeley, CA
L. Guarente, Cambridge, MA
A. Greenleaf, Durham, NC

RECEPTORS AND GENE EXPRESSION
M. Beato, Marburg, FRG
J.-A. Gustafsson, Huddinge, Sweden
P. Mellon, La Jolla, CA
D. Shapiro, Urbana, IL

GENE TRANSCRIPTION AND DEVELOPMENT
M. Green, Cambridge, MA
A. Wolffe, Bethesda, MD
V. Pirrotta, Houston, TX
M. Rosenfeld, La Jolla, CA

SIGNALS FOR TRANSCRIPTIONAL CONTROL
J. Baxter, San Francisco, CA
G. Schutz, Heidelberg, FRG
R. Kornberg, Stanford, CA
M. Tsai, Houston, TX

ONCOGENES, HORMONES, AND CANCER
E. Ziff, New York, NY
B. Groner, Basel, Switzerland
I. Verma, San Diego, CA
M. Lippman, Washington, DC
B. Katzenellenbogen, Urbana, IL

INFORMATION AND APPLICATION FORMS

American Association for Cancer Research
330 Market Street, 2nd Floor
Philadelphia, PA 19106
215-440-9300
215-440-9313 (FAX)

APPLICATION DEADLINE: DECEMBER 11, 1989
Late applications will be accepted on a space-available basis.
This issue of the journal marks the end of a decade of publication under the editorship of Peter Magee. Dr. Magee retires as of December 31, 1989, after a decade marked by great progress. Under his leadership, and with the cooperation of a dedicated staff headed by Margaret Foti, the journal has made its impact in presenting and reflecting a period of extraordinary advances in our knowledge and understanding of neoplasia.

With maintenance of high standards of scholarship, he guided the journal to new heights of service in the communication of research advances in the cancer field. The number of pages published annually increased from 4929 in twelve monthly issues in 1980 to an estimated 7266 pages in 24 semimonthly issues in 1989. With 34% of its papers derived from foreign sources and 31% of its circulation outside the United States, Cancer Research is truly international in scope. The Association and the field owe Dr. Magee much for his dedicated and effective leadership of the journal.

His retirement from the editorship follows closely his retirement last year from the directorship of the Fels Research Institute. As Professor of Pathology at Temple University School of Medicine and a senior member of the Fels Institute, he is continuing his long-standing research interests in mechanisms of carcinogenesis.

Dr. Magee’s successor as editor is Carlo M. Croce, M.D., a distinguished molecular geneticist. He also succeeded Dr. Magee last year as Director of the renamed Fels Institute for Cancer Research and Molecular Biology. He came to Temple University School of Medicine as Professor of Pathology and Molecular Biology after 18 years at the Wistar Institute in Philadelphia.

Sidney Weinhouse
