BREAKING ADVANCES

7015  Highlights from Recent Cancer Literature

CLINICAL STUDIES

7017  MRE11 Expression Is Predictive of Cause-Specific Survival following Radical Radiotherapy for Muscle-Invasive Bladder Cancer
Ananya Choudhury, Louisa D. Nelson, Mark T.W. Teo, Sameer Chilka, Selina Bhattacharai, Colin F. Johnston, Faye Elliott, Johanna Lowery, Claire F. Taylor, Michael Churchman, Johanne Bentley, Margaret A. Knowles, Patricia Harnden, Robert G. Bristow, D. Timothy Bishop, and Anne E. Kiltie
Précis: Findings define a biopsy marker that may predict the type of therapy most likely to cure individual patients of invasive bladder cancer.

7027  The Promise of MicroRNA Replacement Therapy
Andreas G. Bader, David Brown, and Matthew Winkler

7031  Visible Drug Delivery by Supramolecular Nanocarriers Directing to Single-Platformed Diagnosis and Therapy of Pancreatic Tumor Model
Sachiko Kaida, Horacio Cabral, Michiaki Kumagai, Akihiro Kishimura, Yasuko Terada, Masaki Sekino, Ichio Aoki, Nobuhiro Nishiyama, Toru Tani, and Kazunori Kataoka
Précis: Study illustrates how cytotoxic nanoparticle therapies can incorporate an approved MRI contrast agent for superior noninvasive imaging in vivo, easing analysis of preclinical and clinical pharmacology.

MICROENVIRONMENT AND IMMUNOLOGY

7042  The Sympathetic Nervous System Induces a Metastatic Switch in Primary Breast Cancer
Précis: Metastasis promoted by macrophages may be assisted by the sympathetic nervous system and thus blocked by drugs that antagonize adrenergic signaling.

7053  Quantitative Imaging of Lymphatic Function with Liposomal Indocyanine Green
Steven T. Proulx, Paolo Luciani, Stefanie Derzsi, Matthias Rinderknecht, Viviane Mumprecht, Jean-Christophe Leroux, and Michael Detmar
Précis: Quantitative noninvasive imaging of lymphatic flow will greatly assist the study of experimental cancer drugs being developed to target lymphatics, as well as the ability to image lymphedema and sentinel lymph nodes in cancer.

7063  Loss of Osteoclasts Contributes to Development of Osteosarcoma Pulmonary Metastases
Liliana Endo-Munoz, Andrew Cumming, Danny Rickwood, Danielle Wilson, Claudia Cueva, Charlotte Ng, Geoffrey Strutton, A. Ian Cassady, Andreas Evdokiou, Scott Sommerville, Ian Dickinson, Alexander Guminski, and Nicholas A. Saunders
Précis: Findings suggest that osteoclast-preserving therapies may help prevent or delay metastatic development in osteosarcoma.
Hyaluronan Deficiency in Tumor Stroma Impairs Macrophage Trafficking and Tumor Neovascularization

Nobutaka Kobayashi, Seiji Miyoshi, Takahide Mikami, Hiroshi Koyama, Masato Kitazawa, Michiko Takeoka, Kenji Sano, Jun Amano, Zenzo Isogai, Shumpei Niida, Kayoko Oguri, Minoru Okayama, John A. McDonald, Koji Kimata, Shun’ichiro Taniguchi, and Naoki Itano

Précis: Stromal hyaluronan serves as a microenvironmental signal for recruitment of tumor-associated macrophages, which are key cells involved in tumor neovascularization.

Dacarbazine Treatment before Peptide Vaccination Enlarges T-Cell Repertoire Diversity of Melan-A–Specific, Tumor-Reactive CTL in Melanoma Patients

Belinda Palermo, Duilia Del Bello, Alessandra Sottini, Federico Serana, Claudia Ghidini, Novella Guaitieri, Virginia Ferraresi, Caterina Citricalà, Filippo Belardelli, Enrico Proietti, Pier Giorgio Natali, Luisa Imberti, and Paola Nisticò

Précis: Clinical findings support the concept that the use of chemotherapy before a cancer vaccine can promote renewal of tumor-reactive T cells and extend survival.

IFNγ Markedly Cooperates with Intratumoral Dendritic Cell Vaccine in Dog Tumor Models

Kai Mito, Kikuya Sugiura, Kana Ueda, Takako Hori, Takashi Akazawa, Jyoji Yamate, Hiroshi Nakagawa, Shingo Hatoya, Muneo Inaba, Norimitsu Inoue, Susumu Ikehara, and Toshio Inaba

Précis: Findings suggest a mechanism through which caveolin-1 can mediate anti-metastatic effects in melanoma.

Chemotherapy-Induced Genotoxic Stress Promotes Sensitivity to Natural Killer Cell Cytotoxicity by Enabling Missing-Self Recognition

Jason H. Fine, Peter Chen, Aruz Mesci, David Sj. Allan, Stephan Gasser, David H. Raulet, and James R. Carlyle

Précis: Genotoxic and cell-stressing chemicals sensitize tumor cells to MHC-independent missing-self recognition by NK cells.
BRCA1-Associated Epigenetic Regulation of p73 Mediates an Effector Pathway for Chemosensitivity in Ovarian Carcinoma

Nageatte Ibrahim, Lei He, Chee-Onn Leong, Dezyn Xing, Beth Y. Karlan, Elizabeth M. Swisher, Bo R. Rueda, Sandra Orsulic, and Leif W. Ellisen

Précis: Results define a regulatory mechanism that supports contributions of the p53-related protein p73 as a key mediator of the response to platinum chemotherapy in certain ovarian carcinomas.

Cyclin-Dependent Kinase–Mediated Phosphorylation Plays a Critical Role in the Oncogenic Functions of PELP1

Binoj C. Nair, Sujit S. Nair, Dimple Chakravarty, Rambabu Challa, Bramanandam Manavathi, P. Renee Yew, Bakesh Kumar, Rajeshwar Rao Tekmal, and Ratna K. Vadlamudi

Précis: Results define a key intersection between cell cycle control and estrogen receptor signaling that has implications for breast cancer progression.

Oncogenic Wip1 Phosphatase Is Inhibited by miR–16 in the DNA Damage Signaling Pathway

Xinna Zhang, Guohui Wan, Sizolwenkosi Mlotshwa, Vicki Vance, Franklin G. Berger, Hexin Chen, and Xiongbin Lu

Précis: Findings define a mechanism by which a DNA damage-induced microRNA controls a nodal regulator of DNA damage signaling.

Human Papillomavirus Seropositivity Synergizes with MDM2 Variants to Increase the Risk of Oral Squamous Cell Carcinoma

Xingming Chen, Erich M. Sturgis, Dapeng Lei, Kristina Dahlstrom, Qingyi Wei, and Guojun Li

Précis: Findings define a genetic marker elevating susceptibility to HPV-associated oral cancers, particularly in never smokers, never drinkers, and oropharyngeal cancer patients.

Précis: Results define a regulatory mechanism that supports contributions of the p53-related protein p73 as a key mediator of the response to platinum chemotherapy in certain ovarian carcinomas.

Précis: Results define a key intersection between cell cycle control and estrogen receptor signaling that has implications for breast cancer progression.

Précis: Findings define a mechanism by which a DNA damage-induced microRNA controls a nodal regulator of DNA damage signaling.

Précis: Findings define a genetic marker elevating susceptibility to HPV-associated oral cancers, particularly in never smokers, never drinkers, and oropharyngeal cancer patients.

Précis: Findings define a mechanism by which a DNA damage-induced microRNA controls a nodal regulator of DNA damage signaling.

Précis: Results define a regulatory mechanism that supports contributions of the p53-related protein p73 as a key mediator of the response to platinum chemotherapy in certain ovarian carcinomas.

Précis: Results define a key intersection between cell cycle control and estrogen receptor signaling that has implications for breast cancer progression.

Précis: Findings define a mechanism by which a DNA damage-induced microRNA controls a nodal regulator of DNA damage signaling.

Précis: Findings define a genetic marker elevating susceptibility to HPV-associated oral cancers, particularly in never smokers, never drinkers, and oropharyngeal cancer patients.

Précis: Results define a key intersection between cell cycle control and estrogen receptor signaling that has implications for breast cancer progression.

Précis: Findings define a mechanism by which a DNA damage-induced microRNA controls a nodal regulator of DNA damage signaling.

Précis: Results define a genetic marker elevating susceptibility to HPV-associated oral cancers, particularly in never smokers, never drinkers, and oropharyngeal cancer patients.

A Specific Need for CRKL in p210BCR-ABL–Induced Transformation of Mouse Hematopoietic Progenitors
Ji-Heui Seo, Lisa J. Wood, Anupriya Agarwal, Thomas O'Hare, Collin B. Elsea, Ian J. Griswold, Michael W.N. Deininger, Akira Imamoto, and Brian J. Druker

Précis: Results reveal a previously undefined linkage in BCR-ABL effector signaling that is essential to drive transformation of hematopoietic progenitor cells.

Modifying Akt Signaling in B-Cell Chronic Lymphocytic Leukemia Cells
Sebastian W. Hofbauer, Josefina D. Piñón, Gabriele Brachtl, Lucia Haginger, Wei Wang, Karin Jöhrer, Ingeborg Tinhofer, Tanja Nicole Hartmann, and Richard Greil

Précis: A survival pathway in chronic lymphocytic leukemia responding to antigenic and stromal support might be targeted by disrupting an Akt pathway mediating this support.

ABOUT THE COVER
Chronic stress promotes adrenergic-dependent infiltration of macrophages into primary mammary tumors, leading to enhanced metastasis. In an immunofluorescence analysis, anti-β2-adrenergic receptor (green), anti-F4/80 (red), and nuclear counterstaining (blue) were used to visualize 66cl4 mammary tumor cryosections from control and stressed mice. For details, see the article by Sloan and colleagues on page 7042 of this issue.
