BREAKING ADVANCES
8253

| Highlights from Recent Cancer Literature |

REVIEW
8255

| Cancer Stem Cells in the Central Nervous System – A Critical Review |
| Lars Prestegarden and Per Øyvind Enger |

PRIORITIZED REPORTS
8259

| Functional MicroRNA Is Transferred between Glioma Cells |
| Mark Katakowski, Benjamin Buller, Xinli Wang, Thomas Rogers, and Michael Chopp |

| Definition of Ubiquitination Modulator COP1 as a Novel Therapeutic Target in Human Hepatocellular Carcinoma |
| Yun-Han Lee, Jesper B. Andersen, Ho-Taek Song, Adam D. Judge, Daekwan Seo, Tsuyoshi Ishikawa, Jens U. Marquardt, Mitsuteru Kitade, Marianne E. Durkin, Chiara Raggi, Hyun Goo Woo, Elizabeth A. Conner, Itzhak Avital, Ian MacLachlan, Valentina M. Factor, and Snorri S. Thorgeirsson |

| DLC1 Negatively Regulates Angiogenesis in a Paracrine Fashion |
| Yi-Ping Shih, Yi-Chun Liao, Yuan Lin, and Su Hao Lo |

CLINICAL STUDIES
8282

| MicroRNA Expression and Clinical Outcomes in Patients Treated with Adjuvant Chemotherapy after Complete Resection of Non–Small Cell Lung Carcinoma |

| Transcriptome Analysis Reveals that p53 and β-Catenin Alterations Occur in a Group of Aggressive Adrenocortical Cancers |
| Bruno Ragazzoni, Rossella Libé, Sébastien Gaujoux, Guillaume Assié, Amato Fratticci, Pierre Launay, Eric Clauser, Xavier Bertagna, Frédérique Tissier, Aurélien de Reyniès, and Jérôme Bertherat |

| Functional microRNA that is transcribed in one cancer cell can be transported by innate mechanisms to a neighboring cell where it can regulate translation, providing direct evidence that RNA can act as a signaling molecule. |

| Study reveals important respective roles of p53 and β-catenin in adenocortical carcinoma development, delineating distinct tumor subgroups and outcomes. |

| Findings reveal the essential role for recruitment of a specific chromatin-remodeling complex by the retinoblastoma protein in transactivation. |

| No positive correlations were found between expression patterns of a panel of cancer-associated miRNAs and clinical outcomes in the largest study conducted to date of patients receiving adjuvant chemotherapy after radical resection of primary non–small cell lung carcinoma. |
INTEGRATED SYSTEMS AND TECHNOLOGIES

8299 Integrated Microfluidic and Imaging Platform for a Kinase Activity Radioassay to Analyze Minute Patient Cancer Samples
Cong Fang, Yanju Wang, Nam T. Vu, Wei-Yu Lin, Yao-Te Hsieh, Liudmilla Rubbi, Michael E. Phelps, Markus Müschen, Yong-Mi Kim, Arion F. Chatziioannou, Hsian-Rong Tseng, and Thomas G. Graeber

Précis: Rapid and sensitive pharmacodynamic assays that can handle very small patient samples are needed to assist the clinical development of targeted therapeutics.

8309 Early Detection of Recurrent Breast Cancer Using Metabolite Profiling
Vincent M. Asiago, Leiddy Z. Alvarado, Narasimhamurthy Shanaiah, G.A. Nagana Gowda, Kwadwo Owusu-Sarfo, Robert A. Ballas, and Daniel Raftery

Précis: Metabolic profiling of blood serum by NMR and mass spectroscopy can detect breast cancer relapse before it occurs, opening a window of opportunity for patients and oncologists to improve treatment.

MICROENVIRONMENT AND IMMUNOLOGY

8319 Angiotensin-(1-7) Reduces Fibrosis in Orthotopic Breast Tumors
Katherine L. Cook, Linda J. Metheny-Barlow, E. Ann Tallant, and Patricia E. Gallagher

Précis: An endogenous peptide hormone of the renin-angiotensin system reduces fibrosis in the tumor microenvironment, thereby decreasing proliferation of cancer-associated fibroblasts that contribute to malignant progression.

8329 Heparanase Enhances Local and Systemic Osteolysis in Multiple Myeloma by Upregulating the Expression and Secretion of RANKL
Yang Yang, Yongzheng Ren, Vishnu C. Ramani, Li Nan, Larry J. Suva, and Ralph D. Sanderson

Précis: Study provides important mechanistic insights into the action of a key driver of bone metastasis.

8339 Peptide Vaccination after T-Cell Transfer Causes Massive Clonal Expansion, Tumor Eradication, and Manageable Cytokine Storm
Long V. Ly, Marjolein Sluijter, Mieke Versluis, Gre P.M. Luyten, Sjoerd H. van der Burg, Cornelis J.M. Melief, Martine J. Jager, and Thorbald van Hall

Précis: Study describes refinements to active immunotherapy by adoptive T-cell transfer that can heighten effective antitumor T-cell responses in non-lymphodepleted hosts, prompting clinical investigations.

8347 Cdc42-Interacting Protein 4 Promotes Breast Cancer Cell Invasion and Formation of Invadopodia through Activation of N-WASp
Christina S. Pichot, Constandina Arvanitis, Sean M. Hartig, Samuel A. Jensen, John Bechill, Saad Marzouk, Jindan Yu, Jeffrey A. Frost, and Seth J. Corey

Précis: Cell membrane remodeling proteins containing BAR domains are a functionally unique class of proteins being found to contribute to cell migration and invadopodia formation in invasive breast cancers.

8357 Differential Effects of VEGFR-1 and VEGFR-2 Inhibition on Tumor Metastases Based on Host Organ Environment
Yoon-Jin Lee, Daniel L. Karl, Ugwuji N. Maduekwe, Courtney Rothrock, Sandra Ryeom, Patricia A. D’Amore, and Sam S. Yoon

Précis: VEGF promotes tumor angiogenesis primarily through activation of VEGFR-2, but vascularization of liver metastases is dependent on VEGFR-1 activation.

8368 CD4+ T-Cell Help in the Tumor Milieu Is Required for Recruitment and Cytolytic Function of CD8+ T Lymphocytes
Rinke Bos and Linda A. Sherman

Précis: Antitumor efficacy of tumor-specific CD8 T cells relies upon two T-cell helper functions that must be delivered within the tumor microenvironment.
Tumor-Reactive CD8+ Early Effector T Cells Identified at Tumor Site in Primary and Metastatic Melanoma
Andrea Anichini, Alessandra Molla, Claudia Veggetti, Ilaria Bersani, Roberta Zappasodi, Flavio Arienti, Fernando Ravagnani, Andrea Maurichi, Roberto Patuzzo, Mario Santinami, Hanspeter Pircher, Massimo Di Nicola, and Roberta Mortarini

Précis: Findings suggest development of early phases of antitumor immunity even in advanced cancers, with definition of an “early effector” subset of T cells that may be a useful tool to monitor immunity at the tumor site.

Antibodies to Merkel Cell Polyomavirus T Antigen Oncoproteins Reflect Tumor Burden in Merkel Cell Carcinoma Patients
Kelly G. Paulson, Joseph J. Carter, Lisa G. Johnson, Kevin W. Cuhill, Jayasri G. Iyer, David Schrama, Juergen C. Becker, Margaret M. Madeleine, Paul Nghiem, and Denise A. Galloway

Précis: Antibodies that are rare in population controls but common in Merkel cell carcinoma patients can be used to monitor the burden of disease in patients.

Identification of Susceptibility Loci in a Mouse Model of KRASG12D-Driven Pancreatic Cancer
Tonia C. Jorgenson, Bret R. Williams, Allyson Wendland, Andrea Bilger, Eric P. Sandgren, and Norman R. Drinkwater

Précis: Genetic linkage analysis identifies loci that modify the development of pancreatic neoplasms initiated by an oncogenic KRAS allele.

Regulation of DNA Polymerase POLD4 Influences Genomic Instability in Lung Cancer
Qin Miao Huang, Shuta Tomida, Yuji Masuda, Chinatsu Arima, Ke Cao, Taka-aki Kasahara, Hirotaka Osada, Yasushi Yatabe, Tomohiro Akashi, Kenji Kamiya, Takashi Takahashi, and Motoshi Suzuki

Précis: Findings suggest that the frequent occurrence of reduced expression of POLD4, a core DNA replication protein, may play a role in promoting genomic instability in lung cancer.

Ablation of TAK1 Upregulates Reactive Oxygen Species and Selectively Kills Tumor Cells
Emily Omori, Kunihiro Matsumoto, Songyun Zhu, Robert C. Smart, and Jun Ninomiya-Tsuji

Précis: A potential strategy to trigger selective cancer cell killing in many tumor types is suggested by the discovery that inhibition of TAK1 kinase can elicit tumor regression without affecting normal tissues.

Metabolic Aggressiveness in Benign Meningiomas with Chromosomal Instabilities
Daniel Monleón, José Manuel Morales, Ana Gonzalez-Segura, José Manuel Gonzalez-Darder, Rosario Gil-Benso, Miguel Cerdá-Nicolás, and Concepción López-Ginés

Précis: Measuring the metabolic phenotype of intact meningioma biopsies at the same time as histopathologic analysis may allow early identification of clinically aggressive disease among histologically benign tumors.

K-ras Mutation Targeted to Gastric Tissue Progenitor Cells Results in Chronic Inflammation, an Altered Microenvironment, and Progression to Intraepithelial Neoplasia
Tomoyuki Okumura, Russell E. Ericksen, Shigeo Takaishi, Sophie S.W. Wang, Zinaida Dubeykovskiy, Wataru Shibata, Kelly S. Betz, Sureshkuma Muthupalani, Arlin B. Rogers, James G. Fox, Anil K. Rustgi, and Timothy C. Wang

Précis: Findings argue that K-ras activation supports the development of epithelial cancers by strongly supporting the generation of a chronic inflammatory environment.

High Levels of Hsp90 Cochaperone p23 Promote Tumor Progression and Poor Prognosis in Breast Cancer by Increasing Lymph Node Metastases and Drug Resistance

Précis: Findings identify an important modifier of hormone regulated gene expression that drives metastasis and predicts poor prognosis in breast cancer patients.
The Oncoprotein c-Ski Functions as a Direct Antagonist of the Transforming Growth Factor-\(\beta\) Type I Receptor  
Nathalie Ferrand, Azeddine Atfi, and Céline Prunier

Précis: The concept that oncoproteins or tumor suppressor proteins are “cytosolic” or “nuclear” in function is increasingly untenable, with an increasing number found to exert distinct functions in different cellular compartments where they can be found.

RAP80 Acts Independently of BRCA1 in Repair of Topoisomerase II Poison-Induced DNA Damage  
Juniko Iijima, Zhihong Zeng, Shunichi Takeda, and Yoshihito Taniguchi

Précis: Findings define a critical function in the resistance of cancer to the widely employed DNA damaging anticancer agent etoposide.

BRAF Inactivation Drives Aneuploidy by Deregulating CRAF  
Tamihiro Kamata, Jahan Hussain, Susan Giblett, Robert Hayward, Richard Marais, and Catrin Pritchard

Précis: Study defines a new function for the c-RAF kinase in supporting cancer development.

Transforming Properties of 8p11-12 Amplified Genes in Human Breast Cancer  
Zeng-Quan Yang, Gang Liu, Aliccia Bollig-Fischer, Craig N. Giroux, and Stephen P. Ethier

Précis: Results offer new possible strategies to address the eventual acquisition of hormone independence in 8p11-12 amplified, estrogen receptor positive, luminal B type breast cancers, a significant clinical problem.

Evidence of an Adaptive Response Targeting DNA Nonhomologous End Joining and Its Transmission to Bystander Cells  
Holger Klammer, Munira Kadhim, and George Iliakis

Précis: Study elucidates mechanisms underlying adaptive response and bystander effects in cells exposed to low doses of radiation, with the promise of improved strategies for radiation treatment of human tumors.

Overexpression of Transcription Factor Sp2 Inhibits Epidermal Differentiation and Increases Susceptibility to Wound- and Carcinogen-Induced Tumorigenesis  
Tae-Hyung Kim, Shannon L. Chiera, Keith E. Linder, Carol S. Trembus, Robert C. Smart, and Jonathan M. Horowitz

Précis: Findings argue that overexpression of Sp transcription factor Sp2 occurring in a variety of human cancers is likely to have significant functional impact.

Hippo Pathway Effector Yap Is an Ovarian Cancer Oncogene  
Chad A. Hall, Runsheng Wang, Jiangyong Miao, Esther Oliva, Xiaoyun Shen, Thomas Wheeler, Susan G. Hillsenbeck, Sandra Orsulic, and Scott Goode

Précis: Cumulative findings on the role of the Hippo pathway regulated transcription factor Yap in human ovarian cancer suggest a major role for this pathway in ovarian cancer progression.

Activation of Forkhead Box O Transcription Factors by Oncogenic BRAF Promotes p21\(^{\text{sp1}}\)-Dependent Senescence  
Peter L.J. de Keizer, Leisl M. Packer, Anna A. Szypowska, Paulien E. Riedl-Polderman, Niels J.F. van den Broek, Alain de Bruin, Tobias B. Dansen, Richard Marais, Arjan B. Brenkman, and Boudewijn M.T. Burgering

Précis: Study defines key mechanisms by which a central oncogenic driver in melanoma can trigger cell senescence, with implications for understanding the relationships between cancer and aging.

A Major Role of p95/611-CTF, a Carboxy-Terminal Fragment of HER2, in the Down-modulation of the Estrogen Receptor in HER2-Positive Breast Cancers  
Josep Lluís Parra-Palau, Kim Pedersen, Vicente Peg, Maurizio Scalfriti, Pier Davide Angelini, Marta Escorihuela, Sandra Mancilla, Alexandre Sánchez Pla, Santiago Ramón y Cajal, José Baselga, and Joaquín Arribas

Précis: Discovery of a new mechanism of ER regulation mediated by HER2 fragments suggests a new strategy to improve patient responses to endocrine therapy in breast cancer.

DNA Damage Recognition via Activated ATM and p53 Pathway in Nonproliferating Human Prostate Tissue
Sari Jäämaa, Taija M. af Hällström, Anna Sankila, Ville Rantanen, Hannu Koistinen, Ulf-Håkan Stenman, Zhewei Zhang, Zhiming Yang, Angelo M. De Marzo, Kimmo Taari, Mirja Ruutu, Leif C. Andersson, and Marikki Laiho

Précis: Human prostate tissue shows unexpected activation of DNA damage response signaling pathway markers implicating susceptibility of the luminal cells to DNA damage.

Heat Shock Protein 90 Inhibition Depletes LATS1 and LATS2, Two Regulators of the Mammalian Hippo Tumor Suppressor Pathway
Catherine J. Huntoon, Monica D. Nye, Liyi Geng, Kevin L. Peterson, Karen S. Flatten, Paul Haluska, Scott H. Kaufmann, and Larry M. Karnitz

Précis: Findings identify an important mechanism by which HSP90 inhibitors currently being tested in clinical trials may disable a tumor suppressor pathway and promote tumorigenesis.

FTY720 (Fingolimod) Sensitizes Prostate Cancer Cells to Radiotherapy by Inhibition of Sphingosine Kinase-1
Dmitri Pchejetski, Torsten Bohler, Leyre Brizuela, Lysann Sauer, Nicolas Doumerc, Muriel Golzio, Vishal Salunkhe, Justin Teissié, Bernard Malavaud, Jonathan Waxman, and Olivier Cuvillier

Précis: Radiosensitizing properties of a sphingolipid analogue FTY720 (Fingolimod) in clinical testing for multiple sclerosis offer a rationale for its application in prostate cancer treatment.

Cediranib/AZD2171 Inhibits Bone and Brain Metastasis in a Preclinical Model of Advanced Prostate Cancer
Juan Juan Yin, Luhua Zhang, Jeeva Munasinghe, R. Ilona Linnoila, and Kathleen Kelly

Précis: Findings support the utility of applying antiangiogenic therapies to treat advanced cancer patients with metastasis.

F3-Targeted Cisplatin-Hydrogel Nanoparticles as an Effective Therapeutic That Targets Both Murine and Human Ovarian Tumor Endothelial Cells In vivo
Ira Winer, Shouyan Wang, Youg-Eun Koo Lee, Wenzhe Fan, Yusong Gong, Daniela Burgos-Ojeda, Greg Spahlhinger, R. Kopelman, and Ronald J. Buckanovich

Précis: Ovarian cancers may be highly responsive to strategies that target the tumor vasculature, increasing interest in focusing on such strategies to improve therapeutic outcomes.

Telomerase Inhibition Potentiates the Effects of Genotoxic Agents in Breast and Colorectal Cancer Cells in a Cell Cycle–Specific Manner
Raina A. Tamakawa, Helen B. Fleisig, and Judy M.Y. Wong

Précis: Results suggest that the protective role of telomerase in cell cycle–restricted DNA damage repair can be exploited for combined anticaner chemotherapy.

γ-Tocotrienol Inhibits Pancreatic Tumors and Sensitizes Them to Gemcitabine Treatment by Modulating the Inflammatory Microenvironment
Ajaikumar B. Kunnumakkara, Bokyung Sung, Jayaraj Ravindran, Parmeswaran Diagaradjane, Amit Deorukkar, Sanjit Dey, Cemile Koca, Vivek R. Yadav, Zhiming Tong, Juri G. Gelovani, Sushovan Guha, Sunil Krishnan, and Bharat B. Aggarwal

Précis: Preclinical findings strongly encourage clinical evaluation of a novel derivative of vitamin E as an adjuvant treatment with standard of care chemotherapy in pancreatic cancer patients.

Targeted Radiosensitization of Cells Expressing Truncated DNA Polymerase β
Sari Neijenhuis, Manon Verwuijs-Janssen, Lenie J. van den Broek, Adrian C. Begg, and Conchita Vens

Précis: This study demonstrates the feasibility of tumor-targeted radiosensitization in tumor cells exhibiting BER/SSBR deficiencies.
Loss of PTEN Expression by Blocking Nuclear Translocation of EGR1 in Gefitinib-Resistant Lung Cancer Cells Harboring Epidermal Growth Factor Receptor–Activating Mutations
Chizuko Yamamoto, Yuji Basaki, Akihiko Kawahara, Kazutaka Nakashima, Masayoshi Kage, Hiroto Izumi, Kimitoshi Kohno, Hitetaka Uramoto, Kosei Yasumoto, Michihiko Kuwano, and Mayumi Ono

Précis: Results reinforce the therapeutic importance of PTEN expression in treatment of lung adenocarcinoma with EGFR targeting drugs.

Histone Methyltransferase MLL1 Regulates MDRI Transcription and Chemoresistance
Hairong Huo, Pellegrino G. Magro, E. Christy Pietsch, Brijesh B. Patel, and Kathleen W. Scotto

Précis: Findings suggest an approach to attack drug resistance in acute lymphoblastic leukemias and other cancers where oncogenic activations of MLL1 occur.

Basal and Treatment-Induced Activation of AKT Mediates Resistance to Cell Death by AZD6244 (ARRY-142886) in Braf-Mutant Human Cutaneous Melanoma Cells
Y.N. Vashisht Gopal, Wanleng Deng, Scott E. Woodman, Kakajan Komurov, Prahlad Ram, Paul D. Smith, and Michael A. Davies

Précis: Findings offer a rationale for combining an MEK inhibitor with a PI3K-AKT pathway inhibitor to improve the treatment of malignant melanomas with a Braf mutation.

Tumor Cell Kill by c-MYC Depletion: Role of MYC-Regulated Genes that Control DNA Double-Strand Break Repair
Kaisa R. Luoto, Alice X. Meng, Amanda R. Wasylishen, Helen Zhao, Carla L. Coachley, Linda Z. Penn, and Robert G. Bristow

Précis: Findings suggest that anti-MYC agents may prevent genetic instability but may not be useful for radiosensitization or chemosensitization of cancer cells.

Phosphorylation of RalB Is Important for Bladder Cancer Cell Growth and Metastasis
Hong Wang, Charles Owens, Nidhi Chandra, Mark R. Conaway, David L. Brautigan, and Dan Theodorescu

Précis: Mechanistic findings suggest specific tactics to blunt Ral GTase signaling that could offer an effective approach to treat metastatic bladder cancer.
8822

EGFR Promotes Lung Tumorigenesis by Activating miR-7 through a Ras/ERK/Myc Pathway That Targets the Ets2 Transcriptional Repressor ERF
Yu-Ting Chou, Hua-Heng Lin, Ying-Chang Lien, Yuan-Hung Wang, Chun-Fu Hong, Yu-Rung Kao, Sheng-Chieh Lin, Ying-Che Chang, Shu-Yu Lin, Shu-Jen Chen, Hua-Chien Chen, Shauh-Der Yeh, and Cheng-Wen Wu

Précis: Findings identify the microRNA miR-7 as a modulator of EGFR-mediated oncogenesis with important potential applications as a therapeutic target in lung cancer.

8832

Characterization of a Candidate Tumor Suppressor Gene Uroplakin 1A in Esophageal Squamous Cell Carcinoma
Kar Lok Kong, Dora L. Kwong, Li Fu, Tim Hon Man Chan, Leilei Chen, Haibo Liu, Yan Li, Ying-Hui Zhu, Jiong Bi, Yan-Ru Qin, Simon Ying Kit Law, and Xin-Yuan Guan

Précis: A tetraspanin cell surface receptor represents an important new theranostic marker in esophageal cancer, a deadly disease with a rising incidence in developed countries.

8842

In vivo Imaging of Inflammation- and Tumor-Induced Lymph Node Lymphangiogenesis by Immuno–Positron Emission Tomography
Viviane Mumprecht, Michael Honer, Benjamin Vigl, Steven T. Proulx, Eveline Trachsel, Manuela Kaspar, Nadja E. Banziger-Tobler, Roger Schibli, Dario Neri, and Michael Detmar

Précis: Proof-of-concept for a strategy of noninvasive imaging of lymph node lymphangiogenesis could permit early detection of metastasis in cancer patients.

8852

Prognostic and Therapeutic Implications of Distinct Kinase Expression Patterns in Different Subtypes of Breast Cancer
Giampaolo Bianchini, Takayuki Iwamoto, Yuan Qi, Charles Coutant, Christine Y. Shiang, Bailang Wang, Libero Santarpia, Vicente Valero, Gabriel N. Hortobagyi, W. Fraser Symmans, Luca Gianni, and Lajos Pusztai

Précis: Study findings indicate that kinases regulating mitosis and immune functions convey distinct prognostic information that varies by clinical subtypes, suggesting strategies to combine kinase inhibitors for therapeutic benefit.

8863

Maternal Embryonic Leucine Zipper Kinase Is Upregulated and Required in Mammary Tumor-Initiating Cells In vivo
Lionel W. Hebbard, Jochen Maurer, Amber Miller, Jacqueline Lesperance, John Hassell, Robert G. Oshima, and Alexey V. Terskikh

Précis: Results offer preclinical proof-of-concept for targeting a little-studied kinase as a therapeutic strategy to destroy breast cancer–initiating cells.

8864

Tumorigenic and Metastatic Activity of Human Thyroid Cancer Stem Cells
Matilde Todaro, Flora Iovino, Vincenzo Eterno, Patrizia Cammareri, Guido Gambara, Virginia Espina, Giuseppe Guglioli, Francesco Dieli, Silvia Giordano, Ruggero De Maria, and Giorgio Stassi

Précis: Aldehyde dehydrogenase overexpression identifies thyroid cancer stem cells that could promote the development of novel approaches for thyroid malignancy.

8874

Ionizing Radiation Activates the Nrf2 Antioxidant Response

Précis: A delayed adaptive mechanism of radioprotection is described that might be manipulated to mitigate complications of radiotherapy in normal tissues which arise late after radiation exposure.

8884

Protein Tyrosine Phosphatase Receptor Type H9253 Is a Functional Tumor Suppressor Gene Specifically Downregulated in Chronic Myeloid Leukemia
Marco Della Peruta, Giovanni Martinelli, Elisabetta Moratti, Davide Pintani, Marzia Vezzalini, Andrea Mafficini, Tiziana Grafone, Ilaria Iacobucci, Simona Soverini, Marco Murineddu, Fabrizio Vinante, Cristina Tecchio, Giovanna Piras, Attilio Gabbas, Maria Monne, and Claudio Sori

Précis: Findings identify a novel clinically relevant tumor suppressor gene in chronic myelogenous leukemia.
Enhanced Genetic Instability and Dasatinib Sensitivity in Mammary Tumor Cells Lacking NEDD9
Mahendra K. Singh, Eugene Izumchenko, Andres J. Klein-Szanto, Brian L. Egleston, Marina Wolfson, and Erica A. Golemis

Précis: Although Nedd9 overexpression may act as a driver and biomarker for tumor aggressiveness, genetic deficiency in Nedd9 in mice selects for development of hyperaggressive mammary tumors.

Gprc5a Deletion Enhances the Transformed Phenotype in Normal and Malignant Lung Epithelial Cells by Eliciting Persistent Stat3 Signaling Induced by Autocrine Leukemia Inhibitory Factor
Yulong Chen, Jiong Deng, Junya Fujimoto, Humam Kadara, Taoyan Men, Dafna Lotan, and Reuben Lotan

Tissue-Specific Pathways for Estrogen Regulation of Ovarian Cancer Growth and Metastasis
Monique A. Spillman, Nicole G. Manning, Wendy W. Dye, Carol A. Sartorius, Miriam D. Post, Joshua Chuck Harrell, Britta M. Jacobsen, and Kathryn B. Horwitz

Précis: Estrogen regulates unique genes in ovarian cancers that promote lymph node metastasis.

Tuberous Sclerosis Complex 1: An Epithelial Tumor Suppressor Essential to Prevent Spontaneous Prostate Cancer in Aged Mice
Raleigh D. Kladney, Robert D. Cardiff, David J. Kwiatkowski, Gary G. Chiang, Jason D. Weber, Jeffrey M. Arbeit, and Zhi Hong Lu

Précis: Findings suggest that maintaining control of the nodal growth regulatory mTOR complexes during aging is crucial to prevent prostate cancer, the most common cancer in men.

Cell Signaling by Urokinase-type Plasminogen Activator Receptor Induces Stem Cell–like Properties in Breast Cancer Cells
Minji Jo, Boryana M. Eastman, Drue L. Webb, Konstantin Stoletov, Richard Klemke, and Steven L. Gonas

Précis: Plasminogen activators and their receptors are well known to be involved in cancer cell migration and invasion, but this is the first study to show that they also induce cancer stem cell–like properties.

Overexpression of the Protein Tyrosine Phosphatase PRL-2 Correlates with Breast Tumor Formation and Progression
Serge Hardy, Nau Nau Wong, William J. Muller, Morag Park, and Michel L. Tremblay

Précis: Evidence garnered from clinical specimens and mouse models defines an important new driver of breast cancer invasion and metastasis.
9L gliosarcoma cells expressing cel-miR-67 transfer cel-miR-67 to naïve 9L cells. Coculture of cel-miR-67-expressing 9L cells with those that expressed a luciferase reporter containing a complementary sequence to cel-miR-67 results in suppression of luciferase protein expression in the acceptor cells. This image reveals colocalization of cel-miR-67 (dark dots, in situ hybridization signal) with eGFP in 9L cells that do not express cel-miR-67. These findings indicate that glioma cells can transfer functional miRNA from one cell to another. Thus, miRNA serves as an intercellular signaling molecule in glioma. For details, see the article by Katakowski and colleagues on page 8259 of this issue.
