Correction: Oncogenic Synergy between ErbB1, Nucleolin, and Mutant Ras

Correction: Oncogenic Synergy between ErbB1, Nucleolin, and Mutant Ras

ABOUT THE COVER

Breast cancer induces the generation of regulatory B cells (tBregs) from resting B cells. As a result, tBregs convert T cells into Tregs which infiltrate CCL17/CCL22-expressing lungs to protect metastasizing cancer cells from NK cells. For details, see the article by Olkhanud and colleagues on page 3505 of this issue.
