BREAKING ADVANCES

3435  Highlights from Recent Cancer Literature

REVIEW

3437  Systemic DNA Damage Related to Cancer

MEETING REPORT

3442  National Cancer Institute Prostate Cancer Genetics Workshop

PRIORITY REPORTS

3447  Paradoxical Relationship between Chromosomal Instability and Survival Outcome in Cancer
Nicolai J. Birkbak, Aron C. Eklund, Qiyuan Li, Sarah E. McClelland, Patrick Tan, Iain B. Tan, Andrea L. Richardson, Zoltan Szallasi, and Charles Swanton

3453  Pancreatic Stellate Cells Radioprotect Pancreatic Cancer Cells through β1-Integrin Signaling
Tine S. Mantoni, Serena Lunardi, Osama Al-Assar, Atsushi Masamune, and Thomas B. Brunner

INTEGRATED SYSTEMS AND TECHNOLOGIES

3459  Role for Stromal Heterogeneity in Prostate Tumorigenesis
Maria A. Kiskowski, Roger S. Jackson, Jheelam Banerjee, Xiaohong Li, Minchul Kang, Juan M. Iturregui, Omar E. Franco, Simon W. Hayward, and Neil A. Bhowmick

3471  Functional Synergies yet Distinct Modulators Affected by Genetic Alterations in Common Human Cancers
Marina Bessarabova, Olga Pustovalova, Weiwei Shi, Tatiana Serebriyskaya, Alex Ishkin, Kornelia Polyak, Victor E. Velculescu, Tatiana Nikolskaya, and Yuri Nikolsky

MICROENVIRONMENT AND IMMUNOLOGY

3482  Endoglin Regulates Cancer–Stromal Cell Interactions in Prostate Tumors
Diana Romero, Christine O’Neill, Aleksandra Terzic, Liangru Contois, Kira Young, Barbara A. Conley, Raymond C. Bergan, Peter C. Brooks, and Calvin P.H. Vary

3494  Expression of Id-1 Is Regulated by MCAM/MUC18: A Missing Link in Melanoma Progression
Maya Zigler, Gabriell J. Villares, Andrey S. Dobroff, Hua Wang, Li Huang, Russell B. Brauer, Takafumi Kamiya, Vladislava O. Melnikova, Renduo Song, Ran Friedman, Rhoda M. Alani, and Menashe Bar-Eli

Précis: Mechanistic findings reveal how an important cell adhesion molecule melanoma regulates metastatic progression.
Tumor-Evoked Regulatory B Cells Promote Breast Cancer Metastasis by Converting Resting CD4⁺ T Cells to T-Regulatory Cells

Précis: Findings indicate that tumor-evoked regulatory B cells are crucial for lung metastasis, acting to convert resting T cells to regulatory T cells that promote immune escape in the target tissue.

Reprogramming CD19-Specific T Cells with IL-21 Signaling Can Improve Adoptive Immunotherapy of B-Lineage Malignancies

Précis: Findings reveal that addition of IL-21 to culture provides an extrinsic reprogramming signal to generate effective T-cell immunotherapy.

Unraveling Cancer Chemoimmunotherapy Mechanisms by Gene and Protein Expression Profiling of Responses to Cyclophosphamide

Précis: Rapidly growing interest in combined regimens of chemoimmunotherapy is based upon emerging evidence that the efficacy of certain chemotherapeutic agents relies upon coordinate immune stimulatory effects.

Anti-TIM3 Antibody Promotes T Cell IFN-γ-Mediated Antitumor Immunity and Suppresses Established Tumors

Précis: The first antibody targeting investigations for a little studied T-cell co-inhibitory receptor establish single agent activity and mechanism of action in multiple preclinical mouse models of cancer and primary carcinogenesis.

miR-125b Is Methylated and Functions as a Tumor Suppressor by Regulating the ETS1 Proto-oncogene in Human Invasive Breast Cancer

Précis: This study identifies an oncogenic transcription factor as a key target of a tumor suppressive microRNA that is downregulated in various types of invasive cancer, including breast cancer.

Human Glioma Growth Is Controlled by MicroRNA-10b

Précis: Findings characterize the oncogenic functions of microRNA-10b in glioma biology by in silico, in vitro and in vivo approaches.

Increased Survival following Tumorigenesis in Ts65Dn Mice that Model Down Syndrome

Précis: Mouse model studies offer compelling biological evidence that trisomy in Down Syndrome is protective against cancer, extending survival through multiple mechanisms.

Evidence That Serum Levels of the Soluble Receptor for Advanced Glycation End Products Are Inversely Associated with Pancreatic Cancer Risk: A Prospective Study

Précis: This prospective study suggests that soluble forms of the receptor for advanced glycation end-products, a molecule with anti-inflammatory properties, might prevent pancreatic cancers thought to be driven by proinflammatory stimuli.
Bel-2 Inhibits Nuclear Homologous Recombination by Localizing BRCA1 to the Endomembranes
Corentin Laulier, Aurélie Barascu, Josée Guirouilh-Barbat, Gaëlle Pennarun, Catherine Le Chalony, François Chevalier, Gaëlle Palierre, Pascale Bertrand, Jean Marc Verbavatz, and Bernard S. Lopez

Précis: Findings suggest a new tumor suppressor function and new mode of regulation for BRCA1, with general implications for understanding the role of homologous recombination in the maintenance of genome stability.

Deciphering the Molecular Events Necessary for Synergistic Tumor Cell Apoptosis Mediated by the Histone Deacetylase Inhibitor Vorinostat and the BH3 Mimetic ABT-737
Adrian P. Wiegmans, Amber E. Alsop, Michael Bots, Leonie A. Cluse, Steven P. Williams, Kellie-Marie Banks, Rachael Bally, Clare L. Scott, Anna Frenzel, Andreas Villunger, and Ricky W. Johnstone

Précis: An extensive analysis of the basis for cancer cell death synergy between two important new classes of molecular targeted therapies stimulates interest in evaluation of their clinical combination.

Epigenetic Silencing of MicroRNA-203 Dysregulates ABL1 Expression and Drives Helicobacter-Associated Gastric Lymphomagenesis
Vanessa J. Craig, Sergio B. Cogliatti, Hubert Rehrauer, Thomas Wündisch, and Anne Müller

Précis: Progression of H. pylori-associated gastritis to gastric MALT lymphoma is epigenetically regulated by promoter methylation of a microRNA that regulates the ABL oncogene.

Following Cytochrome c Release, Autophagy Is Inhibited during Chemotherapy-Induced Apoptosis by Caspase 8–Mediated Cleavage of Beclin 1
Hua Li, Peng Wang, Quanhong Sun, Wen-Xing Ding, Xiao-Ming Yin, Robert W. Sobol, Donna B. Stolz, Jian Yu, and Lin Zhang

Précis: This study provides direct evidence that cleavage of Beclin 1 by caspases functions as a critical switch for turning off autophagy for effective killing of cancer cells.
Effects of Carbon Ion Beam on Putative Colon Cancer Stem Cells and Its Comparison with X-rays

Xing Cui, Kazuhiko Oonishi, Hirohiko Tsujii, Takeshi Yasuda, Yoshitaka Matsumoto, Yoshiya Furusawa, Makoto Akashi, Tadashi Kamada, and Ryuichi Okayasu

Précis: This is the first study to show that carbon ion beam therapy may have advantages over photon beam therapy in targeting cancer stem-like cells for destruction.

ΔNp63 Versatilely Regulates a Broad NF-κB Gene Program and Promotes Squamous Epithelial Proliferation, Migration, and Inflammation

Xinping Yang, Hai Lu, Bin Yan, Rose-Anne Romano, Yansong Bian, Jay Friedman, Praveen Duggal, Clint Allen, Ryan Chuang, Reza Ehsanian, Han Si, Satrajit Sinha, Carter Van Waes, and Zhong Chen

Précis: Mechanistic findings reveal how the interaction of two key epidermal regulatory transcription factors orchestrate inflammatory changes characteristic of injury and malignant transformation.

Does the Hepatitis B Antigen HBx Promote the Appearance of Liver Cancer Stem Cells?

Alla Arzumanyan, Tiffany Friedman, Irene O.L. Ng, Marcia M. Clayton, Zhaorui Lian, and Mark A. Feitelson

Précis: This work establishes a link between chronic HBV infection and liver cancer by showing that the virus oncoprotein, HBx, promotes the appearance of "stemness" markers.

ABOUT THE COVER

Breast cancer induces the generation of regulatory B cells (tBregs) from resting B cells. As a result, tBregs convert T cells into Tregs which infiltrate CCL17/CCL22-expressing lungs to protect metastasizing cancer cells from NK cells. For details, see the article by Olkhanud and colleagues on page 3505 of this issue.
