Role for Stromal Heterogeneity in Prostate Tumorigenesis
Maria A. Kiskowski, Roger S. Jackson, Jheelam Banerjee, Xiaohong Li, Minchul Kang, Juan M. Iturregui, Omar E. Franco, Simon W. Hayward, and Neil A. Bhowmick

Précis: Heterogeneity of stromal TGF-β responsiveness supports cooperative intrastromal signaling and prostate adenocarcinoma progression.

Functional Synergies yet Distinct Modulators Affected by Genetic Alterations in Common Human Cancers
Marina Bessarabova, Olga Pustovalova, Weiwei Shi, Tatiana Serebriyskaya, Alex Ishkin, Kornelia Polyak, Victor E. Velculescu, Tatiana Nikolskaya, and Yuri Nikolsky

Précis: This genetic bioinformatics study reports the development of a cancer model offering a unified perspective on the complex signaling and regulatory networks that comprise different human cancers.

Endoglin Regulates Cancer–Stromal Cell Interactions in Prostate Tumors
Diana Romero, Christine O’Neill, Aleksandra Terzic, Liangru Contois, Kira Young, Barbara A. Conley, Raymond C. Bergan, Peter C. Brooks, and Calvin P.H. Vary

Précis: Findings show how a TGF-β accessory receptor being explored as a therapeutic target acts to support the viability of cancer-associated fibroblasts in the tumor microenvironment, which are key drivers of angiogenesis and growth.

Expression of Id-1 Is Regulated by MCAM/MUC18: A Missing Link in Melanoma Progression
Maya Zigler, Gabriel J. Villares, Andrey S. Dobroff, Hua Wang, Li Huang, Russell B. Braeuer, Takafulmi Kamiya, Vladislava O. Melnikova, Renduo Song, Ran Friedman, Rhoda M. Alani, and Menashe Bar-Eli

Précis: Mechanistic findings reveal how an important cell adhesion molecule melanoma regulates metastatic progression.
Tumor-Evoked Regulatory B Cells Promote Breast Cancer Metastasis by Converting Resting CD4⁺ T Cells to T-Regulatory Cells

Precis: Findings indicate that tumor-evoked regulatory B cells are crucial for lung metastasis, acting to convert resting T cells to regulatory T cells that promote immune escape in the target tissue.

Reprogramming CD19-Specific T Cells with IL-21 Signaling Can Improve Adoptive Immunotherapy of B-Lineage Malignancies

Precis: Findings reveal that addition of IL-21 to culture provides an extrinsic reprogramming signal to generate effective T-cell immunotherapy.

Unraveling Cancer Chemoimmunotherapy Mechanisms by Gene and Protein Expression Profiling of Responses to Cyclophosphamide

Precis: Rapidly growing interest in combined regimens of chemoimmunotherapy is based upon emerging evidence that the efficacy of certain chemotherapeutic agents relies upon coordinate immune stimulatory effects.

Anti-TIM3 Antibody Promotes T Cell IFN-γ-Mediated Antitumor Immunity and Suppresses Established Tumors

Precis: The first antibody targeting investigations for a little studied T-cell co-inhibitory receptor establish single agent activity and mechanism of action in multiple preclinical mouse models of cancer and primary carcinogenesis.

miR-125b Is Methylated and Functions as a Tumor Suppressor by Regulating the ETS1 Proto-oncogene in Human Invasive Breast Cancer

Precis: This study identifies an oncogenic transcription factor as a key target of a tumor suppressive microRNA that is downregulated in various types of invasive cancer, including breast cancer.

Human Glioma Growth Is Controlled by MicroRNA-10b

Precis: Findings characterize the oncogenic functions of microRNA-10b in glioma biology by in silico, in vitro and in vivo approaches.

Increased Survival following Tumorigenesis in Ts65Dn Mice that Model Down Syndrome

Precis: Mouse model studies offer compelling biological evidence that trisomy in Down Syndrome is protective against cancer, extending survival through multiple mechanisms.

Evidence That Serum Levels of the Soluble Receptor for Advanced Glycation End Products Are Inversely Associated with Pancreatic Cancer Risk: A Prospective Study

Precis: This prospective study suggests that soluble forms of the receptor for advanced glycation end-products, a molecule with anti-inflammatory properties, might prevent pancreatic cancers thought to be driven by proinflammatory stimuli.
3590 | THERAPEUTICS, TARGETS, AND CHEMICAL BIOLOGY

Bcl-2 Inhibits Nuclear Homologous Recombination by Localizing BRCA1 to the Endomembranes
Corentin Laulier, Aurélie Barascu, Josée Guirouilh-Barbat, Gaëlle Pennarun, Catherine Le Chalony, François Chevalier, Gaëlle Palierne, Pascale Bertrand, Jean Marc Verbavatz, and Bernard S. Lopez

Précis: Findings suggest a new tumor suppressor function and new mode of regulation for BRCA1, with general implications for understanding the role of homologous recombination in the maintenance of genome stability.

3603 | Deciphering the Molecular Events Necessary for Synergistic Tumor Cell Apoptosis Mediated by the Histone Deacetylase Inhibitor Vorinostat and the BH3 Mimetic ABT-737
Adrian P. Wiegmans, Amber E. Alsop, Michael Bots, Leonie A. Cluse, Steven P. Williams, Kellie-Marie Banks, Rachael Balli, Clare L. Scott, Anna Frenzel, Andreas Villunger, and Ricky W. Johnstone

Précis: An extensive analysis of the basis for cancer cell death synergy between two important new classes of molecular targeted therapies stimulates interest in evaluation of their clinical combination.

3616 | Epigenetic Silencing of MicroRNA-203 Dysregulates ABL1 Expression and Drives Helicobacter-Associated Gastric Lymphomagenesis
Vanessa J. Craig, Sergio B. Cogliatti, Hubert Rehrauer, Thomas Wiindisch, and Anne Müller

Précis: Progression of H. pylori-associated gastritis to gastric MALT lymphoma is epigenetically regulated by promoter methylation of a microRNA that regulates the ABL oncogene.

3625 | Following Cytochrome c Release, Autophagy Is Inhibited during Chemotherapy-Induced Apoptosis by Caspase 8–Mediated Cleavage of Beclin 1
Hua Li, Peng Wang, Quanhong Sun, Wen-Xing Ding, Xiao-Ming Yin, Robert W. Sobol, Donna B. Stolz, Jian Yu, and Lin Zhang

Précis: This study provides direct evidence that cleavage of Beclin 1 by caspases functions as a critical switch for turning off autophagy for effective killing of cancer cells.

3635 | The Dual EGFR/HER2 Inhibitor Lapatinib Synergistically Enhances the Antitumor Activity of the Histone Deacetylase Inhibitor Panobinostat in Colorectal Cancer Models
Melissa J. LaBonte, Peter M. Wilson, Will Fazzone, Jared Russell, Stan G. Louie, Anthony El-Khoueiry, Heinz-Josef Lenz, and Robert D. Ladner

Précis: Findings provide a preclinical rationale to combine HDAC inhibitors with EGFR and HER2-targeted therapies in clinical trials seeking to improve colorectal cancer treatment.

3649 | Contribution of Abcc10 (Mrp7) to In Vivo Paclitaxel Resistance as Assessed in Abcc10−/− Mice

Précis: This is the first study to define an ATP-binding transporter other than P-glycoprotein that mediates cytotoxic sensitivity to taxanes.

3658 | STAT3 Mediates Resistance to MEK Inhibitor through MicroRNA miR-17
Bingbing Dai, Jieru Meng, Michael Peyton, Luc Girard, William G. Bornmann, Bingliang Fang, and Jack A. Roth

Précis: This study suggests strategies to overcome resistance to MEK kinase inhibitors which are presently being evaluated in clinical trials.

3669 | Differential Expression of S6K2 Dictates Tissue-Specific Requirement for S6K1 in Mediating Aberrant mTORC1 Signaling and Tumorigenesis
Caterina Nardella, Andrea Lunardi, Giuseppe Fedele, John G. Clohessy, Andrea Alimonti, Sara C. Kozma, George Thomas, Massimo Loda, and Pier Paolo Pandolfi

Précis: Findings suggest clinical evaluation of S6 kinase inhibitors in a subset of adrenal gland tumors lacking the tumor suppressor PTEN.

**ABOUT THE COVER**

Breast cancer induces the generation of regulatory B cells (tBregs) from resting B cells. As a result, tBregs convert T cells into Tregs which infiltrate CCL17/CCL22-expressing lungs to protect metastasizing cancer cells from NK cells. For details, see the article by Olkhanud and colleagues on page 3505 of this issue.
