**Précis:** Findings suggest that the most effective combinations of mTOR inhibitors in clinical trials might be as adjuvants in cancer immunochemotherapy.

**Précis:** Findings offer mechanistic insights into the tumor-associated hyaluronidase system along with a preclinical proof-of-concept of the safety and efficacy of targeting this system to control prostate cancer growth and progression.

**Précis:** Endothelial-specific ablation of a specific cell adhesion function is sufficient to decrease metastasis of melanoma to the lung, suggesting strategies to prevent this type of progression based on disruption of melanoma cell binding to endothelia.
Nonredundant Functions for Akt Isoforms in Astrocyte Growth and Gliomagenesis in an Orthotopic Transplantation Model
Raelene Endersby, Xiaoyan Zhu, Nissim Hay, David W. Ellison, and Suzanne J. Baker

Precise: Findings elucidate the unique functions of Akt isoforms 1-3 in the growth regulation, transformation, and tumorigenesis of gliomas.

Common and Overlapping Oncogenic Pathways Contribute to the Evolution of Acute Myeloid Leukemias
Brynn T. Kvinlaug, Wai-In Chan, Lars Bullinger, Mukundhan Ramaswami, Christopher Sears, Donna Foster, Stanley E. Lazic, Rachel Okabe, Axel Benner, Benjamin H. Lee, Imusha De Silva, Peter J.M. Valk, Ruud Delwel, Scott A. Armstrong, Hartmut Döhner, D. Gary Gilliland, and Brian J.P. Huntly

Precise: Common programs of self-renewal and transformation act downstream of diverse oncogenes in acute myeloid leukemia, suggesting that mechanistically common therapeutic approaches may be possible regardless of the identity of the driver oncogene involved.

Quantitative, Noninvasive Imaging of Radiation-Induced DNA Double-Strand Breaks In Vivo
Wenrong Li, Fang Li, Qian Huang, Jingping Shen, Frank Wolf, Yujun He, Xinjian Liu, Y. Angela Hu, Joel S. Bedford, and Chuan-Yuan Li

Precise: This study establishes a novel approach to visualize and quantify DNA double strand breaks in live cells and tissues.

Sirtuin 1 Is Upregulated in a Subset of Hepatocellular Carcinomas where It Is Essential for Telomere Maintenance and Tumor Cell Growth
Juan Chen, Bin Zhang, Nathalie Wong, Anthony W.I. Lo, Ka-Fai To, Anthony W.H. Chan, Margaret H.L. Ng, Cecilia Y.S. Ho, Suk-Hang Cheng, Paul B.S. Lai, Jun Yu, Ho-Keung Ng, Ming-Tat Ling, Ai-Long Huang, Xue-Fei Cai, and Ben C.B. Ko

Precise: Findings offer a preclinical proof-of-concept for the clinical exploration of SIRT1 inhibitors for liver cancer treatment.

Intrinsic Anticancer Drug Resistance of Malignant Melanoma Cells Is Abrogated by IFN-β and Valproic Acid
Wynand P. Roos, Eva Jost, Christina Belohlavek, Georg Nagel, Gerhard Fritz, and Bernd Kaina

Precise: Resistance arising to the front line chemotherapy for melanoma can be relieved by cotreatment with interferon and an HDAC inhibitor which reactivates effective pathways of cancer cell death.

Identification of Aldo-Keto Reductase AKR1B10 as a Selective Target for Modification and Inhibition by Prostaglandin A12: Implications for Antitumoral Activity
Beatriz Díez-Dacal, Javier Gayarre, Severine Gharbi, John F. Timms, Claire Coderch, Federico Gago, and Dolores Pérez-Sala

Precise: The anti-inflammatory compound prostaglandin A12, which selectively inhibits an aldo-keto-reductase, could be exploited to relieve chemoresistance to doxorubicin and perhaps other cancer drugs.

Antihelminth Compound Niclosamide Downregulates Wnt Signaling and Elicits Antitumor Responses in Tumors with Activating APC Mutations
Takuya Osada, Minyong Chen, Xiao Yi Yang, Ivan Spasojevic, Jeffrey B. Vandeusen, David Hsu, Bryan M. Clary, Timothy M. Clay, Wei Chen, Michael A. Morse, and H. Kim Lyerly

Precise: Important preclinical findings suggest that the well-tolerated antihelminth compound niclosamide might be repositioned for clinical treatment of many colorectal cancers.

Enhancement of Cancer Vaccine Therapy by Systemic Delivery of a Tumor-Targeting Salmonella-Based STAT3 shRNA Suppresses the Growth of Established Melanoma Tumors
Edwin R. Manuel, Celine A. Blache, Rebecca Paquette, Teodora I. Kaltcheva, Hidenobu Ishizaki, Joshua D.I. Ellenhorn, Michael Hensel, Leonid Metelitsa, and Don J. Diamond

Precise: Correcting a tolerogenic mechanism of immune escape established by cancer cells could greatly enhance the therapeutic efficacy of a bacterial-expressed survivin vaccine in bulky established tumors.
Delineation of a Cellular Hierarchy in Lung Cancer Reveals an Oncofetal Antigen Expressed on Tumor-Initiating Cells

Precis: This study identifies an oncofetal antigen expressed on undifferentiated lung-cancer-initiating cells and shows that its targeting can elicit sustained lung tumor regression.

INαγ Inhibits Gastric Carcinogenesis by Inducing Epithelial Cell Autophagy and T-Cell Apoptosis
Shuai Ping Tu, Michael Quante, Govind Bhagat, Shigeo Takaihi, Guanglin Cui, Xiang Dong Yang, Suresh Kumar Muthuplani, Wataru Shibata, James G. Fox, D. Mark Pritchard, and Timothy C. Wang

Precis: IFN-γ is a proinflammatory cytokine that might be expected to promote carcinogenesis in the setting of gastric inflammation, where bacterial infections have a major role, but instead its dominant action is tumor suppressive, consistent with this role defined in other solid tumor settings.

LIN28B Promotes Colon Cancer Progression and Metastasis

Precis: An isoform of the RNA binding protein Lin28 which mediates pluripotent stem cell programming is implicated in this study to promote colon tumor pathogenesis, especially metastasis.

Nuclear ErbB2 Enhances Translation and Cell Growth by Activating Transcription of Ribosomal RNA Genes
Long-Yuan Li, Hsiu-Li Chen, Yi-Hsien Hsieh, Ying-Nai Wang, Hsiao-Ju Chu, Ya-Huiy Chen, Huei-Yu Chen, Peng-Ju Chien, Haou-Tzong Ma, Ho-Cheng Tsai, Chien-Chen Lai, Yuh-Ping Shen, Huang-Chun Lin, Chang-Hai Tsai, and Mien-Chie Hung

Precis: Findings elucidate functions of a nuclear localized form of ErbB2/HER2 that may contribute to cancer growth and progression.
Protein Kinase D3 Sensitizes RAF Inhibitor RAF265 in Melanoma Cells by Preventing Reactivation of MAPK Signaling
Jian Chen, Qiong Shen, Mark Labow, and L. Alex Gaither

Précis: A protein kinase little studied in cancer is implicated as a potentially important mediator of resistance to RAF or MEK inhibitors that is being widely experienced in clinical trials of these drugs.

FoxM1 in Tumorigenicity of the Neuroblastoma Cells and Renewal of the Neural Progenitors
Zebin Wang, Hyun Jung Park, Janai R. Carr, Yi-ju Chen, Yu Zheng, Jing Li, Angela L. Tyner, Robert H. Costa, Srilata Bagchi, and Pradip Raychaudhuri

Précis: Findings identify an important driver of aggressive neuroblastoma cells which acts by sustaining maintenance of an undifferentiated state.

MST1 Is a Multifunctional Caspase-Independent Inhibitor of Androgenic Signaling
Bekir Cinar, Filiz Kisaayak Collak, Delia Lopez, Seckin Akgul, Nishit K. Mukhopadhyay, Murat Kilicarslan, Daniel G. Gioeli, and Michael R. Freeman

Précis: A regulator of the Hippo tumor suppressor pathway is found to be an inhibitor of androgen receptor signaling and a suppressor of prostate cell growth.

HOXC9 Links Cell-Cycle Exit and Neuronal Differentiation and Is a Prognostic Marker in Neuroblastoma
Ling Mao, Jane Ding, Yunhong Zha, Liqun Yang, Brian A. McCarthy, William King, Hongjuan Cui, and Han-Fei Ding

Précis: Findings link a developmentally important gene to the control of neuroblastoma cell proliferation and differentiation, providing an attractive theranostic target for neuroblastoma.

ABOUT THE COVER
Metabolic bioluminescence imaging. Induced metabolic bioluminescence imaging allows for quantification and structure-associated assessment of metabolites from cryopreserved samples. This technique was used to measure ATP and glucose concentrations in sequential cryosections from human ovarian tumor cells (IGROV-1) xenografted in nude mice. Hematoxylin & eosin stainings as well as ATP levels were used to discriminate between regions of vital and nonvital tumor and adjacent normal tissue, such as stroma. Color-coded concentrations (µmol/g) of both metabolites revealed a reduction in ATP and glucose levels in tumors treated with the anti-VEGF mAb A4.6.1. For details, see the article by Nardo and colleagues on page 4214 of this issue.
