BREAKING ADVANCES

4053 Highlights from Recent Cancer Literature

REVIEW

4055 Heterogeneity Maintenance in Glioblastoma: A Social Network
Rudy Bonavia, Maria-del-Mar Inda, Webster K. Cavenee, and Frank B. Furnari

PRIORITY REPORTS

4061 PIK3R1 (p85α) Is Somatically Mutated at High Frequency in Primary Endometrial Cancer
Mary E. Erick, Meghan L. Rudd, Andrew K. Godwin, Dennis Sgroi, Maria Merino, and Daphne W. Bell

4068 Formation of the eIF4F Translation–Initiation Complex Determines Sensitivity to Anticancer Drugs Targeting the EGFR and HER2 Receptors
Pierre Zindy, Yann Bergé, Ben Allal, Thomas Filleron, Sandra Pierredon, Anne Cammas, Samantha Beck, Loubrna Mhamdi, Li Fan, Gilles Favre, Jean-Pierre Delord, Henri Roché, Florence Dalenc, Magali Lacroix-Triki, and Stéphan Vagner

Molecular and Cellular Pathobiology

4096 A Novel Function of Junctional Adhesion Molecule-C in Mediating Melanoma Cell Metastasis
Harald F. Langer, Valeria V. Orlova, Changping Xie, Sunil Kaul, Darius Schneider, Anke S. Lonsdorf, Manuela Fahrleitner, Eun Young Choi, Vanessa Dutto, Manuela Pellegrini, Sylvia Grossklaus, Peter P. Nawroth, Gustavo Barettot, Sentot Santoso, Sam T. Hwang, Bernd Arnold, and Triantafyllos Chavakis

4097 mTOR Kinase Inhibitor AZD8055 Enhances the Immunotherapeutic Activity of an Agonist CD40 Antibody in Cancer Treatment
Qun Jiang, Jonathan M. Weiss, Timothy Back, Tim Chan, John R. Ortaldo, Sylvie Guichard, and Robert H. Wiltout

Microenvironment and Immunology

4074 mTOR Kinase Inhibitor AZD8055 Enhances the Immunotherapeutic Activity of an Agonist CD40 Antibody in Cancer Treatment
Qun Jiang, Jonathan M. Weiss, Timothy Back, Tim Chan, John R. Ortaldo, Sylvie Guichard, and Robert H. Wiltout

Preúes: Findings suggest that the most effective combinations of mTOR inhibitors in clinical trials might be as adjuvants in cancer immunotherapy.

4085 Targeting Hyaluronidase for Cancer Therapy: Antitumor Activity of Sulfated Hyaluronic Acid in Prostate Cancer Cells
Anaid Benitez, Travis J. Yates, Luis E. Lopez, Wolfgang H. Cerwinka, Ashraf Bakkar, and Vinata B. Lokeshwar

Preúes: Findings offer mechanistic insights into the tumor-associated hyaluronidase system along with a preclinical proof-of-concept of the safety and efficacy of targeting this system to control prostate cancer growth and progression.

4086 Príecis: Findings offer mechanistic insights into the tumor-associated hyaluronidase system along with a preclinical proof-of-concept of the safety and efficacy of targeting this system to control prostate cancer growth and progression.

MOLECULAR AND CELLULAR PATHOBIOLOGY

4096 A Novel Function of Junctional Adhesion Molecule-C in Mediating Melanoma Cell Metastasis
Harald F. Langer, Valeria V. Orlova, Changping Xie, Sunil Kaul, Darius Schneider, Anke S. Lonsdorf, Manuela Fahrleitner, Eun Young Choi, Vanessa Dutto, Manuela Pellegrini, Sylvia Grossklaus, Peter P. Nawroth, Gustavo Barettot, Sentot Santoso, Sam T. Hwang, Bernd Arnold, and Triantafyllos Chavakis

Preúes: Endothelial-specific ablation of a specific cell adhesion function is sufficient to decrease metastasis of melanoma to the lung, suggesting strategies to prevent this type of progression based on disruption of melanoma cell binding to endothelia.

Inhibition of Histone Lysine Methylation Enhances Cancer-Testis Antigen Expression in Lung Cancer Cells: Implications for Adoptive Immunotherapy of Cancer

Mahadev Rao, Nachimuthu Chinnasamy, Julie A. Hong, Yuwei Zhang, Mary Zhang, Sichuan Xi, Fang Liu, Victor E. Marquez, Richard A. Morgan, and David S. Schump

**Précis:** Data presented in this article are the first to demonstrate that modulation of histone lysine methylation enhances the derepression of CT-X genes by DNA demethylating agents. Combining inhibitors of histone lysine methylation such as DZNep with DNA demethylating agents may be a novel strategy to augment cancer-testis antigen expression for cancer immunotherapy.

Targeting the p53 Pathway in Retinoblastoma with Subconjunctival Nutlin-3a

Rachel C. Brennan, Sara Federico, Cori Bradley, Jiukun Zhang, Jacqueline Flores-Otero, Matthew Wilson, Clinton Stewart, Fangyi Zhu, Kip Guy, and Michael A. Dyer

**Précis:** A locally delivered p53-activating therapy shows both efficacy and reduced toxicity for retinoblastoma treatment compared to current systemic treatments.

Glycolytic Phenotype and AMP Kinase Modify the Pathologic Response of Tumor Xenografts to VEGF Neutralization

Giorgia Nardo, Elena Favaro, Matteo Curtarello, Lidia Moserle, Elisabetta Zulato, Luca Persano, Elisabetta Rossi, Giovanni Esposito, Marika Crescenzini, Oriol Casanovas, Ulrike Sattler, Wolfgang Mueller-Klieser, Barbara Biesalski, Oliver Theves, Rossella Canese, Egidio Iorio, Paola Zanovello, Alberto Amadori, and Stefano Indraccolo

**Précis:** This study identifies new metabolic and genetic markers useful to predict the therapeutic response of tumors to VEGF neutralization.

Delineation of a Cellular Hierarchy in Lung Cancer Reveals an Oncofetal Antigen Expressed on Tumor-Initiating Cells

**Précis:** This study identifies an oncofetal antigen expressed on undifferentiated lung-cancer initiating cells and shows that its targeting can elicit sustained lung tumor regression.

IFN-γ Inhibits Gastric Carcinogenesis by Inducing Epithelial Cell Autophagy and T-Cell Apoptosis

Shuai Ping Tu, Michael Quante, Govind Bhagat, Shigeo Takaiishi, Guanglin Cui, Xiang Dong Yang, Suresh Kumar Muthtupani, Wataru Shibata, James G. Fox, D. Mark Pritchard, and Timothy C. Wang

**Précis:** IFN-γ is a proinflammatory cytokine that might be expected to promote carcinogenesis in the setting of gastric inflammation, where bacterial infections have a major role, but instead its dominant action is tumor suppressive, consistent with this role defined in other solid tumor settings.

LIN28B Promotes Colon Cancer Progression and Metastasis

Catarina E. King, Miriam Cuatrecasas, Antoni Castells, Antonia R. Sepulveda, Ju-Seog Lee, and Anil K. Rustgi

**Précis:** An isoform of the RNA binding protein Lin28 which mediates pluripotent stem cell programming is implicated in this study to promote colon tumor pathogenesis, especially metastasis.

Nuclear ErbB2 Enhances Translation and Cell Growth by Activating Transcription of Ribosomal RNA Genes

Long-Yuan Li, Hsiu-Yen Chen, Yi-Hsien Hsieh, Ying-Nai Wang, Hsiao-Ju Chu, Ya-Huey Chen, Hui-Yu Chen, Peng-Ju Chien, Haou-Tzong Ma, Ho-Cheng Tsai, Chien-Chen Lai, Yuh-Ping Sher, Huang-Chun Lin, Chang-Hai Tsai, and Mien-Chie Hung

**Précis:** Findings elucidate functions of a nuclear localized form of ErbB2/HER2 that may contribute to cancer growth and progression.
Protein Kinase D3 Sensitizes RAF Inhibitor RAF265 in Melanoma Cells by Preventing Reactivation of MAPK Signaling
Jian Chen, Qiong Shen, Mark Labow, and L. Alex Gaither

Précis: A protein kinase little studied in cancer is implicated as a potentially important mediator of resistance to RAF or MEK inhibitors that is being widely experienced in clinical trials of these drugs.

FoxM1 in Tumorigenicity of the Neuroblastoma Cells and Renewal of the Neural Progenitors
Zebin Wang, Hyun Jung Park, Janai R. Carr, Yi-ju Chen, Yu Zheng, Jing Li, Angela L. Tyner, Robert H. Costa, Srilata Bagchi, and Pradip Raychaudhuri

Précis: Findings identify an important driver of aggressive neuroblastoma cells which acts by sustaining maintenance of an undifferentiated state.

MST1 Is a Multifunctional Caspase-Independent Inhibitor of Androgenic Signaling
Bekir Cinar, Filiz Kisaayak Collak, Delia Lopez, Seckin Akgul, Nishit K. Mukhopadhyay, Murat Kilicarslan, Daniel G. Gioeli, and Michael R. Freeman

Précis: A regulator of the Hippo tumor suppressor pathway is found to be an inhibitor of androgen receptor signaling and a suppressor of prostate cell growth.

HOXC9 Links Cell-Cycle Exit and Neuronal Differentiation and Is a Prognostic Marker in Neuroblastoma
Ling Mao, Jane Ding, Yunhong Zha, Liqun Yang, Brian A. McCarthy, William King, Hongjuan Cui, and Han-Fei Ding

Précis: Findings link a developmentally important gene to the control of neuroblastoma cell proliferation and differentiation, providing an attractive theranostic target for neuroblastoma.

About the Cover
Metabolic bioluminescence imaging. Induced metabolic bioluminescence imaging allows for quantification and structure-associated assessment of metabolites from cryopreserved samples. This technique was used to measure ATP and glucose concentrations in sequential cryosections from human ovarian tumor cells (IGROV-1) xenografted in nude mice. Hematoxylin & eosin stainings as well as ATP levels were used to discriminate between regions of vital and nonvital tumor and adjacent normal tissue, such as stroma. Color-coded concentrations (µmol/g) of both metabolites revealed a reduction in ATP and glucose levels in tumors treated with the anti-VEGF mAb A4.6.1. For details, see the article by Nardo and colleagues on page 4214 of this issue.
