**BREAKING ADVANCES**

4053 Highlights from Recent Cancer Literature

4055 Heterogeneity Maintenance in Glioblastoma: A Social Network
Rudy Bonavia, Maria-del-Mar Inda, Webster K. Cavenee, and Frank B. Furnari

**REVIEW**

**MICROENVIRONMENT AND IMMUNOLOGY**

4074 mTOR Kinase Inhibitor AZD8055 Enhances the Immunotherapeutic Activity of an Agonist CD40 Antibody in Cancer Treatment
Qun Jiang, Jonathan M. Weiss, Timothy Back, Tim Chan, John R. Ortaldo, Sylvie Guichard, and Robert H. Wiltout

**PRIORITY REPORTS**

4061 PIK3RI (p85α) Is Somatically Mutated at High Frequency in Primary Endometrial Cancer
Mary E. Ulrick, Meghan L. Rudd, Andrew K. Godwin, Dennis Sgroi, Maria Merino, and Daphne W. Bell

**MOLECULAR AND CELLULAR PATHOBIOLOGY**

4085 Targeting Hyaluronidase for Cancer Therapy: Antitumor Activity of Sulfated Hyaluronic Acid in Prostate Cancer Cells
Anaïd Benítez, Travis J. Yates, Luis E. Lopez, Wolfgang H. Cerwinka, Ashraf Bakkar, and Vinata B. Lokeshwar

4068 Formation of the eIF4F Translation–Initiation Complex Determines Sensitivity to Anticancer Drugs Targeting the EGFR and HER2 Receptors
Pierre Zindy, Yann Bergé, Ben Allal, Thomas Filleron, Sandra Pierredon, Anne Carmanas, Samantha Beck, Loubna Mhamdi, Li Fan, Gilles Favre, Jean-Pierre Delord, Henri Roché, Florence Dalenc, Magali Lacroix-Triki, and Stéphan Vagner

4096 A Novel Function of Junctional Adhesion Molecule-C in Mediating Melanoma Cell Metastasis
Harald F. Langer, Valeria V. Orlova, Changping Xie, Sunil Kaul, Darius Schneider, Anke S. Loosdorf, Manuela Fahlgrütner, Eun Young Choi, Vanessa Dutto, Manuela Pellegrini, Sylvia Grossklaus, Peter P. Nawroth, Gustavo Barettot, Sentot Santoso, Sam T. Hwang, Bernd Arnold, and Triantafyllos Chavakis
Nonredundant Functions for Akt Isoforms in Astrocyte Growth and Gliomagenesis in an Orthotopic Transplantation Model
Raelene Endersby, Xiaoyan Zhu, Nissim Hay, David W. Ellison, and Suzanne J. Baker

Précis: Findings elucidate the unique functions of Akt isoforms 1-3 in the growth regulation, transformation, and tumorigenesis of gliomas.

Common and Overlapping Oncogenic Pathways Contribute to the Evolution of Acute Myeloid Leukemias
Brynn T. Kvinlaug, Wai-In Chan, Lars Bullinger, Mukundhan Ramaswami, Christopher Sears, Donna Foster, Stanley E. Lazic, Rachel Okabe, Axel Benner, Benjamin H. Lee, Inusha De Silva, Peter J.M. Valk, Ruud Delwel, Scott A. Armstrong, Hartmut Döhner, D. Gary Gilliland, and Brian J.P. Huntly

Précis: Common programs of self-renewal and transformation act downstream of diverse oncogenes in acute myeloid leukemia, suggesting that mechanistically common therapeutic approaches may be possible regardless of the identity of the driver oncogene involved.

Quantitative, Noninvasive Imaging of Radiation-Induced DNA Double-Strand Breaks In Vivo
Wenrong Li, Fang Li, Qian Huang, Jingping Shen, Frank Wolf, Yujun He, Xinjian Liu, Y. Angela Hu, Joel S. Bedford, and Chuan-Yuan Li

Précis: This study establishes a novel approach to visualize and quantify DNA double strand breaks in live cells and tissues.

Sirtuin 1 Is Upregulated in a Subset of Hepatocellular Carcinomas where It Is Essential for Telomere Maintenance and Tumor Cell Growth
Juan Chen, Bin Zhang, Nathalie Wong, Anthony W.I. Lo, Ka-Fai To, Anthony W.H. Chan, Margaret H.L. Ng, Cecilia Y.S. Ho, Suk-Hang Cheng, Paul B.S. Lai, Jun Yu, Ho-Keung Ng, Ming-Tat Ling, Ai-Long Huang, Xue-Fei Cai, and Ben C.B. Ko

Précis: Findings offer a preclinical proof-of-concept for the clinical exploration of SIRT1 inhibitors for liver cancer treatment.

Intrinsic Anticancer Drug Resistance of Malignant Melanoma Cells Is Abrogated by IFN-β and Valproic Acid
Wynand P. Roos, Eva Jost, Christina Belohlawek, Georg Nagel, Gerhard Fritz, and Bernd Kaina

Précis: Resistance arising to the front line chemotherapy for melanoma can be relieved by cotreatment with interferon and an HDAC inhibitor which reactivates effective pathways of cancer cell death.

Identification of Aldo-Keto Reductase AKR1B10 as a Selective Target for Modification and Inhibition by Prostaglandin A1: Implications for Antitumoral Activity
Beatriz Díez-Dacal, Javier Gayarre, Severine Gharbi, John F. Timms, Claire Coderch, Federico Gago, and Dolores Pérez-Sala

Précis: The anti-inflammatory compound prostaglandin A1, which selectively inhibits an aldo-keto-reductase, could be exploited to relieve chemoresistance to doxorubicin and perhaps other cancer drugs.

Antihelminth Compound Niclosamide Downregulates Wnt Signaling and Elicits Antitumor Responses in Tumors with Activating APC Mutations
Takuya Osada, Minyong Chen, Xiao Yi Yang, Ivan Spasojevic, Jeffrey B. Vandeusen, David Hsu, Bryan M. Clary, Timothy M. Clay, Wei Chen, Michael A. Morse, and H. Kim Lyerly

Précis: Important preclinical findings suggest that the well-tolerated antihelminth compound niclosamide might be repositioned for clinical treatment of many colorectal cancers.

Enhancement of Cancer Vaccine Therapy by Systemic Delivery of a Tumor-Targeting Salmonella-Based STAT3 shRNA Suppresses the Growth of Established Melanoma Tumors
Edwin R. Manuel, Celine A. Blache, Rebecca Paquette, Teodora I. Kaltcheva, Hidenobu Ishizaki, Joshua D.I. Ellenhorn, Michael Hensel, Leonid Metelitsa, and Don J. Diamond

Précis: Correcting a tolerogenic mechanism of immune escape established by cancer cells could greatly enhance the therapeutic efficacy of a bacterial-expressed survivin vaccine in bulky established tumors.
Inhibition of Histone Lysine Methylation Enhances Cancer-Testis Antigen Expression in Lung Cancer Cells: Implications for Adoptive Immunotherapy of Cancer
Mahadev Rao, Nachimuthu Chinnasamy, Julie A. Hong, Yuwei Zhang, Mary Zhang, Sichuan Xi, Fang Liu, Victor E. Marquez, Richard A. Morgan, and David S. Schrump

Precise: Data presented in this article are the first to demonstrate that modulation of histone lysine methylation enhances the derepression of CT-X genes by DNA demethylating agents. Combining inhibitors of histone lysine methylation such as DZNep with DNA demethylating agents may be a novel strategy to augment cancer-testis antigen expression for cancer immunotherapy.

Targeting the p53 Pathway in Retinoblastoma with Subconjunctival Nutlin-3a
Rachel C. Brennan, Sara Federico, Cori Bradley, Jiakun Zhang, Jacqueline Flores-Otero, Matthew Wilson, Clinton Stewart, Fangyi Zhu, Kip Guy, and Michael A. Dyer

Precise: A locally delivered p53-activating therapy shows both efficacy and reduced toxicity for retinoblastoma treatment compared to current systemic treatments.

Glycolytic Phenotype and AMP Kinase Modify the Pathologic Response of Tumor Xenografts to VEGF Neutralization
Giorgia Nardo, Elena Favaro, Matteo Curtarello, Lidia Moserle, Elisabetta Zulato, Luca Persano, Elisabetta Rossi, Giovanni Esposito, Marika Crescenzi, Oriol Thews, Ulrike Sattler, Wolfgang Mueller-Klieser, Barbara Biesalski, Oliver Thews, Rossella Canese, Egidio Iorio, Paola Zanovello, Alberto Amadori, and Stefano Indraccolo

Precise: This study identifies new metabolic and genetic markers useful to predict the therapeutic response of tumors to VEGF neutralization.

Delineation of a Cellular Hierarchy in Lung Cancer Reveals an Oncofetal Antigen Expressed on Tumor-Initiating Cells

Precise: This study identifies an oncofetal antigen expressed on undifferentiated lung-cancer-initiating cells and shows that its targeting can elicit sustained lung tumor regression.

IFN-γ Inhibits Gastric Carcinogenesis by Inducing Epithelial Cell Autophagy and T-Cell Apoptosis
Shuai Ping Tu, Michael Quante, Govind Bhagat, Shigee Takaiishi, Guanglin Cui, Xiang Dong Yang, Suresh Kumar Mutthuplani, Wataru Shibata, James G. Fox, D. Mark Pritchard, and Timothy C. Wang

Precise: IFN-γ is a proinflammatory cytokine that might be expected to promote carcinogenesis in the setting of gastric infection, where bacterial infections have a major role, but instead its dominant action is tumor suppressive, consistent with this role defined in other solid tumor settings.

LIN28B Promotes Colon Cancer Progression and Metastasis
Catrina E. King, Miriam Cuatrecasas, Antoni Castells, Antonia R. Sepulveda, Ju-Seog Lee, and Anil K. Rustigi

Precise: An isoform of the RNA binding protein Lin28 which mediates pluripotent stem cell programming is implicated in this study to promote colon tumor pathogenesis, especially metastasis.

Nuclear ErbB2 Enhances Translation and Cell Growth by Activating Transcription of Ribosomal RNA Genes
Long-Yuan Li, Hsiuyi Chen, Yi-Hsien Hsieh, Ying-Nai Wang, Hsiao-Ju Chu, Ya-Huey Chen, Hui-Yu Chen, Peng-Ju Chien, Haou-Tzong Ma, Ho-Cheng Tsai, Chien-Chen Li, Yuh-Ping Sher, Huang-Chun Lien, Chang-Hai Tsai, and Mien-Chie Hung

Precise: Findings elucidate functions of a nuclear localized form of ErbB2/HER2 that may contribute to cancer growth and progression.
**Protein Kinase D3 Sensitizes RAF Inhibitor RAF265 in Melanoma Cells by Preventing Reactivation of MAPK Signaling**
Jian Chen, Qiong Shen, Mark Labow, and L. Alex Gaither

*Précis:* A protein kinase little studied in cancer is implicated as a potentially important mediator of resistance to RAF or MEK inhibitors that is being widely experienced in clinical trials of these drugs.

**FoxM1 in Tumorigenicity of the Neuroblastoma Cells and Renewal of the Neural Progenitors**
Zebin Wang, Hyun Jung Park, Janai R. Carr, Yi-ju Chen, Yu Zheng, Jing Li, Angela L. Tyner, Robert H. Costa, Srilata Bagchi, and Pradip Raychaudhuri

*Précis:* Findings identify an important driver of aggressive neuroblastoma cells which acts by sustaining maintenance of an undifferentiated state.

**MST1 Is a Multifunctional Caspase-Independent Inhibitor of Androgenic Signaling**
Bekir Cinar, Filiz Kisaayak Collak, Delia Lopez, Seckin Akgul, Nishit K. Mukhopadhyay, Murat Kilicarslan, Daniel G. Gioeli, and Michael R. Freeman

*Précis:* A regulator of the Hippo tumor suppressor pathway is found to be an inhibitor of androgen receptor signaling and a suppressor of prostate cell growth.

**HOXC9 Links Cell-Cycle Exit and Neuronal Differentiation and Is a Prognostic Marker in Neuroblastoma**
Ling Mao, Jane Ding, Yunhong Zha, Liquin Yang, Brian A. McCarthy, William King, Hongjuan Cui, and Han-Fei Ding

*Précis:* Findings link a developmentally important gene to the control of neuroblastoma cell proliferation and differentiation, providing an attractive theranostic target for neuroblastoma.

---

**ABOUT THE COVER**

Metabolic bioluminescence imaging. Induced metabolic bioluminescence imaging allows for quantification and structure-associated assessment of metabolites from cryopreserved samples. This technique was used to measure ATP and glucose concentrations in sequential cryosections from human ovarian tumor cells (IGROV-1) xenografted in nude mice. Hematoxylin & eosin stainings as well as ATP levels were used to discriminate between regions of vital and nonvital tumor and adjacent normal tissue, such as stroma. Color-coded concentrations (µmol/g) of both metabolites revealed a reduction in ATP and glucose levels in tumors treated with the anti-VEGF mAb A4.6.1. For details, see the article by Nardo and colleagues on page 4214 of this issue.
