**BREAKING ADVANCES**

4053 | Highlights from Recent Cancer Literature

**REVIEW**

4055 | Heterogeneity Maintenance in Glioblastoma: A Social Network
Rudy Bonavia, Maria-del-Mar Inda, Webster K. Cavenee, and Frank B. Furnari

**PRIORITY REPORTS**

4061 | **PIK3R1** (p85α) Is Somatically Mutated at High Frequency in Primary Endometrial Cancer
Mary E. Erick, Meghan L. Rudd, Andrew K. Godwin, Dennis Sgroi, Maria Merino, and Daphne W. Bell

**MICROENVIRONMENT AND IMMUNOLOGY**

4074 | mTOR Kinase Inhibitor AZD8055 Enhances the Immunotherapeutic Activity of an Agonist CD40 Antibody in Cancer Treatment
Qun Jiang, Jonathan M. Weiss, Timothy Back, Tim Chan, John R. Ortaldo, Sylvie Guichard, and Robert H. Willout

**MOLECULAR AND CELLULAR PATHOBIOLOGY**

4085 | Targeting Hyaluronidase for Cancer Therapy: Antitumor Activity of Sulfated Hyaluronic Acid in Prostate Cancer Cells
Anaid Benitez, Travis J. Yates, Luis E. Lopez, Wolfgang H. Cerwinka, Ashraf Bakkar, and Vinata B. Lokeshwar

4096 | A Novel Function of Junctional Adhesion Molecule-C in Mediating Melanoma Cell Metastasis
Harald F. Langer, Valeria V. Orlova, Changping Xie, Sunil Kaul, Darius Schneider, Anke S. Lonsdorf, Manuela Fahrleitner, Eun Young Choi, Vanessa Dutoit, Manuela Pellegrini, Sylvia Grossklaus, Peter P. Nawroth, Gustavo Barettin, Sentot Santos, Sam T. Hwang, Bernd Arnold, and Triantafyllos Chavakis

**Pépites**

- Findings suggest that the most effective combinations of mTOR inhibitors in clinical trials might be as adjuvants in cancer immunotherapy.

- Findings offer mechanistic insights into the tumor-associated hyaluronidase system along with a preclinical proof-of-concept of the safety and efficacy of targeting this system to control prostate cancer growth and progression.

- Endothelial-specific ablation of a specific cell adhesion function is sufficient to decrease metastasis of melanoma to the lung, suggesting strategies to prevent this type of progression based on disruption of melanoma cell binding to endothelia.
Nonredundant Functions for Akt Isoforms in Astrocyte Growth and Gliomagenesis in an Orthotopic Transplantation Model

Raelene Endersby, Xiaoyan Zhu, Nissim Hay, David W. Ellison, and Suzanne J. Baker

Précis: Findings elucidate the unique functions of Akt isoforms 1-3 in the growth regulation, transformation, and tumorigenesis of gliomas.

Common and Overlapping Oncogenic Pathways Contribute to the Evolution of Acute Myeloid Leukemias

Brynn T. Kvinlaug, Wai-In Chan, Lars Bullinger, Mukundhan Ramaswami, Christopher Sears, Donna Foster, Stanley E. Lazic, Rachel Okabe, D. Gary Gilliland, and Brian J.P. Huntly

Précis: Common programs of self-renewal and transformation act downstream of diverse oncogenes in acute myeloid leukemia, suggesting that mechanistically common therapeutic approaches may be possible regardless of the identity of the driver oncogene involved.

Quantitative, Noninvasive Imaging of Radiation-Induced DNA Double-Strand Breaks In Vivo

Wenrong Li, Fang Li, Qian Huang, Jingping Shen, Frank Wolf, Yujun He, Xinjian Liu, Y. Angela Hu, Joel S. Bedford, and Chuan-Yuan Li

Précis: This study establishes a novel approach to visualize and quantify DNA double strand breaks in live cells and tissues.

Sirtuin 1 Is Upregulated in a Subset of Hepatocellular Carcinomas where It Is Essential for Telomere Maintenance and Tumor Cell Growth

Juan Chen, Bin Zhang, Nathalie Wong, Anthony W.I. Lo, Ka-Fai To, Anthony W.H. Chan, Margaret H.L. Ng, Cecilia Y.S. Ho, Suk-Hang Cheng, Paul B.S. Lai, Jun Yu, Ho-Keung Ng, Ming-Tat Ling, Ai-Long Huang, Xue-Fei Cai, and Ben C.B. Ko

Précis: Findings offer a preclinical proof-of-concept for the clinical exploration of SIRT1 inhibitors for liver cancer treatment.

Intrinsic Anticancer Drug Resistance of Malignant Melanoma Cells Is Abrogated by IFN-β and Valproic Acid

Wynand P. Roos, Eva Jost, Christina Belohlavek, Georg Nagel, Gerhard Fritz, and Bernd Kaina

Précis: Resistance arising to the front line chemotherapy for melanoma can be relieved by cotreatment with interferon and an HDAC inhibitor which reactivates effective pathways of cancer cell death.

Identification of Aldo-Keto Reductase AKR1B10 as a Selective Target for Modification and Inhibition by Prostaglandin A₁: Implications for Antitumoral Activity

Beatriz Diez-Dacal, Javier Gayarre, Severine Gharbi, John F. Timms, Claire Coderch, Federico Gago, and Dolores Perez-Sala

Précis: The anti-inflammatory compound prostaglandin A₁, which selectively inhibits an aldo-keto-reductase, could be exploited to relieve chemoresistance to doxorubicin and perhaps other cancer drugs.

Antihelminth Compound Niclosamide Downregulates Wnt Signaling and Elicits Antitumor Responses in Tumors with Activating APC Mutations

Takuya Osada, Minyong Chen, Xiao Yi Yang, Ivan Spasojevic, Jeffrey B. Vandeusen, David Hsu, Bryan M. Clary, Timothy M. Clay, Wei Chen, Michael A. Morse, and H. Kim Lyerly

Précis: Important preclinical findings suggest that the well-tolerated antihelminth compound niclosamide might be repositioned for clinical treatment of many colorectal cancers.

Enhancement of Cancer Vaccine Therapy by Systemic Delivery of a Tumor-Targeting Salmonella-Based STAT3 shRNA Suppresses the Growth of Established Melanoma Tumors

Edwin R. Manuel, Caroline A. Blache, Rebecca Paquette, Teodora I. Kaltcheva, Hidenobu Ishizaki, Joshua D.I. Ellenhorn, Michael Hensel, Leonid Metelitsa, and Don J. Diamond

Précis: Correcting a tolerogenic mechanism of immune escape established by cancer cells could greatly enhance the therapeutic efficacy of a bacterial-expressed survivin vaccine in bulky established tumors.
Delineation of a Cellular Hierarchy in Lung Cancer Reveals an Oncofetal Antigen Expressed on Tumor-Initiating Cells

Précis: This study identifies an oncofetal antigen expressed on undifferentiated lung-cancer-initiating cells and shows that its targeting can elicit sustained lung tumor regression.

IFN-γ Inhibits Gastric Carcinogenesis by Inducing Epithelial Cell Autophagy and T-Cell Apoptosis

Shuai Ping Tu, Michael Quante, Govind Bhagat, Shigee Takaiishi, Guanglin Cui, Xiang Dong Yang, Sureshkumar Muthuplani, Wataru Shibata, James G. Fox, D. Mark Pritchard, and Timothy C. Wang

Précis: IFN-γ is a proinflammatory cytokine that might be expected to promote carcinogenesis in the setting of gastric inflammation, where bacterial infections have a major role, but instead its dominant action is tumor suppressive, consistent with this role defined in other solid tumor settings.

LIN28B Promotes Colon Cancer Progression and Metastasis

Catarina E. King, Miriam Cuatrecasas, Antonia R. Sepulveda, Timmy C. Wang, James G. Fox, D. Mark Pritchard, and Anil K. Rustgi

Précis: An isoform of the RNA binding protein Lin28 which mediates pluripotent stem cell programming is implicated in this study to promote colon tumor pathogenesis, especially metastasis.

Nuclear ErbB2 Enhances Translation and Cell Growth by Activating Transcription of Ribosomal RNA Genes

Précis: Findings elucidate functions of a nuclear localized form of ErbB2/HER2 that may contribute to cancer growth and progression.
Protein Kinase D3 Sensitizes RAF Inhibitor RAF265 in Melanoma Cells by Preventing Reactivation of MAPK Signaling
Jian Chen, Qiong Shen, Mark Labow, and L. Alex Gaither

Précis: A protein kinase little studied in cancer is implicated as a potentially important mediator of resistance to RAF or MEK inhibitors that is being widely experienced in clinical trials of these drugs.

FoxM1 in Tumorigenicity of the Neuroblastoma Cells and Renewal of the Neural Progenitors
Zebin Wang, Hyun Jung Park, Janai R. Carr, Yi-ju Chen, Yu Zheng, Jing Li, Angela L. Tyner, Robert H. Costa, Srilata Bagchi, and Pradip Raychaudhuri

Précis: Findings identify an important driver of aggressive neuroblastoma cells which acts by sustaining maintenance of an undifferentiated state.

MST1 Is a Multifunctional Caspase-Independent Inhibitor of Androgenic Signaling
Bekir Cinar, Filiz Kisaayak Collak, Delia Lopez, Nishit K. Mukhopadhyay, Murat Kilicarslan, Daniel G. Gioeli, and Michael R. Freeman

Précis: A regulator of the Hippo tumor suppressor pathway is found to be an inhibitor of androgen receptor signaling and a suppressor of prostate cell growth.

HOXC9 Links Cell-Cycle Exit and Neuronal Differentiation and Is a Prognostic Marker in Neuroblastoma
Ling Mao, Jane Ding, Yunhong Zha, Liqun Yang, Brian A. McCarthy, William King, Hongjuan Cui, and Han-Fei Ding

Précis: Findings link a developmentally important gene to the control of neuroblastoma cell proliferation and differentiation, providing an attractive theranostic target for neuroblastoma.

About the Cover
Metabolic bioluminescence imaging. Induced metabolic bioluminescence imaging allows for quantification and structure-associated assessment of metabolites from cryopreserved samples. This technique was used to measure ATP and glucose concentrations in sequential cryosections from human ovarian tumor cells (IGROV-1) xenografted in nude mice. Hematoxylin & eosin stainings as well as ATP levels were used to discriminate between regions of vital and nonvital tumor and adjacent normal tissue, such as stroma. Color-coded concentrations (µmol/g) of both metabolites revealed a reduction in ATP and glucose levels in tumors treated with the anti-VEGF mAb A4.6.1. For details, see the article by Nardo and colleagues on page 4214 of this issue.
