MICROENVIRONMENT AND IMMUNOLOGY

4380 HER2 Overexpression Elicits a Proinflammatory IL-6 Autocrine Signaling Loop That Is Critical for Tumorigenesis

Zachary C. Hartman, Xiao-Yi Yang, Oliver Glass, Gangjin Lei, Takuya Osada, Sandeep S. Dave, Michael A. Morse, Timothy M. Clay, and Herbert K. Lyerly

Précis: HER2 activation in breast cancer is typically thought to act through tumor cell autonomous effects, but this is not the case, as revealed by these findings that HER2 activation also supports the inflammatory tumor microenvironment that is essential to license tumor cell growth.

MOLECULAR AND CELLULAR PATHOBIOLOGY

4392 Blocking EphB1 Receptor Forward Signaling in Spinal Cord Relieves Bone Cancer Pain and Rescues Analgesic Effect of Morphine Treatment in Rodents

Su Liu, Wen-Tao Liu, Yue-Peng Liu, Hai-Long Dong, Mark Henkemeyer, Li-Ze Xiong, and Xue-Jun Song

Précis: This study reveals a mechanistic basis for the pathogenesis of bone cancer pain and suggests potential therapeutic strategy to improve the analgesic effects of morphine in this setting.

4403 Anaplastic Thyroid Cancers Harbor Novel Oncogenic Mutations of the ALK Gene

Avaniyapuram Kannan Murugan and Mingzhao Xing

Précis: Findings reveal oncogenic mutations in the ALK kinase in anaplastic thyroid cancer, a deadly endocrine cancer, which suggest new strategies for therapeutic management with ALK kinase inhibitors presently in clinical development.

4412 HDAC4-Regulated STAT1 Activation Mediates Platinum Resistance in Ovarian Cancer

Précis: Through an intrapatient analysis of acquired platinum resistance, this study reveals a new strategy to blunt or deter resistance and improve treatment outcomes.

4423 Tumor Galectin-1 Mediates Tumor Growth and Metastasis through Regulation of T-Cell Apoptosis

Alice Banh, Jing Zhang, Hongbin Cao, Donna M. Bouley, Shirley Kwok, Christina Kong, Amato J. Giaccia, Albert C. Koong, and Quynh-Thu Le

Précis: Findings establish that galectin-1 secreted by tumors rather than the host is more important to cancer progression, and that the key function of this molecule among its roles in cancer is to promote immune escape.

4432 Pancreatic Ductal Adenocarcinoma Mice Lacking Mucin 1 have a Profound Defect in Tumor Growth and Metastasis

Dahlia M. Besmer, Jennifer M. Curry, Lopamudra D. Roy, Teresa L. Tindel, Mahnaz Sahraei, Jorge Schettini, Sun-II Hwang, Yong Y. Lee, Sandra J. Gendler, and Pinku Mukherjee

Précis: MUC1 glycoprotein is essential for the growth and progression of pancreatic cancer via activation of the MAPK signaling pathway, blocking of which impedes cancer cell proliferation.

4443 MicroRNA Sequence and Expression Analysis in Breast Tumors by Deep Sequencing

Thalia A. Farazi, Hugo M. Horlings, Jelle J. ten Hoeve, Aleksandra Mihailovic, Hans Halfwerk, Pavel Morozov, Miguel Brown, Markus Hafner, Fabien Reyal, Marieke van Kounenwove, Bas Kreike, Daoud Sie, Volker Hovestadt, Lodewyk F.A. Wessels, Marc J. van de Vijver, and Thomas Tuschl

Précis: Using a newly devised, cost-effective sequencing method, this study identifies miRNAs that are deregulated in breast cancer and assesses the potential of miRNAs as prognostic and diagnostic markers.

4454 Hedgehog-Producing Cancer Cells Respond to and Require Autocrine Hedgehog Activity

Samer Singh, Zhiquang Wang, Dennis Liang Fei, Kendall E. Black, John A. Goetz, Robert Tokhunts, Camilla Giambelli, Jezabel Rodriguez-Blanco, Jun Long, Ethan Lee, Karoline J. Bregel, Pablo A. Bejarano, Ethan Dmitrovsky, Anthony J. Capobianco, and David J. Robbins

Précis: Findings question the presently accepted view that autocrine signaling has no role in Hedgehog-dependent cancers.
Splicing Factor hnRNP A2/B1 Regulates Tumor Suppressor Gene Splicing and Is an Oncogenic Driver in Glioblastoma
Regina Golan-Gerstl, Michal Cohen, Asaf Shilo, Sung-Suk Suh, Arianna Bakàcs, Luigi Coppola, and Rotem Karni
Pécis: Increasing evidence points to a critical role for dysregulated patterns of alternate splicing in tumorigenesis, here illustrated by the definition of an RNA splicing factor and its key targets that drive the formation of aggressive brain tumors.

Nicotinamide Blocks Proliferation and Induces Apoptosis of Chronic Lymphocytic Leukemia Cells through Activation of the p53/miR-34a/SIRT1 Tumor Suppressor Network
Valentina Audrito, Tiziana Vaisitti, Davide Rossi, Daniela Gottardi, Giovanni D’Arena, Luca Laurenti, Gianluca Gaidano, Fabio Malavasi, and Silvia Deaglio
Pécis: Findings suggest a mechanistic rationale to combine vitamin B3 with DNA-damaging chemotherapeutics to improve therapeutic responses in chronic lymphocytic leukemia.

PREVENTION AND EPIDEMIOLOGY

A Low Carbohydrate, High Protein Diet Slows Tumor Growth and Prevents Cancer Initiation
Victor W. Ho, Kelvin Leung, Anderson Hsu, Beryl Luk, June Lai, Sung Yuan Shen, Andrew L. Minchinton, Dawn Waterhouse, Marcel B. Bally, Wendy Lin, Brad H. Nelson, Laura M. Sly, and Gerald Krystal
Pécis: Striking preclinical findings offer a dramatic illustration of how reducing dietary carbohydrates can reduce cancer incidence, slow tumor growth, and cooperate with growth restrictive or anti-inflammatory agents to block cancer development.

THERAPEUTICS, TARGETS, AND CHEMICAL BIOLOGY

MET-Independent Lung Cancer Cells Evading EGFR Kinase Inhibitors Are Therapeutically Susceptible to BH3 Mimetic Agents
Weiwen Fan, Zhe Tang, Lihong Yin, Bei Morrison, Said Hafez-Khayata, Pingfu Fu, Honglian Huang, Rakesh Bagai, Shan Jiang, Adam Kresak, Scott Howell, Amit Vasanji, Chris A. Flask, Balazs Halmos, Henry Koon, and Patrick C. Ma
Pécis: Findings provide a rationale for lung cancer clinical trials to combine BH3 mimetic drugs and receptor tyrosine kinase inhibitors, based on understanding of how early resistance to the latter drugs emerge.
Precis: An approved osteoporosis drug might be repositioned in cancer patients to promote chemotaxis of V\(\gamma\)9\(\delta\)2 T cells to tumors and trigger their destruction.

Combination of PI3K/mTOR Inhibitors: Antitumor Activity and Molecular Correlates

Precis: Combining allosteric and catalytic inhibitors of the PI3K/mTOR pathway is much more efficacious than single drug treatment.

Overcoming Trastuzumab Resistance in Breast Cancer by Targeting Dysregulated Glucose Metabolism

Precis: Resistance to ErbB2/HER2-based therapy for breast cancer occurs widely, necessitating strategies to restore therapeutic responses in this disease.

RECL1 and WRN Proteins Are Potential Therapeutic Targets in Head and Neck Squamous Cell Carcinoma

Precis: This study provides preclinical proof-of-concept for two RECL DNA helicases as novel therapeutic targets to treat aggressive head and neck cancers that are rising rapidly in incidence.

Analysis of Mitosis and Antimitotic Drug Responses in Tumors by In Vivo Microscopy and Single-Cell Pharmacodynamics

Precis: This is the first study to use high resolution in vivo microscopy to follow the phenotypic effects of a cancer drug in single tumor cells within the context of the tumor microenvironment.
c-Myc Regulates RNA Splicing of the A-Raf Kinase and Its Activation of the ERK Pathway

Jens Rauch, Kim Moran-Jones, Valerie Albrecht, Thomas Schwarzl, Keith Hunter, Olivier Gires, and Walter Kolch

Précis: Findings prompt a new paradigm to understand how Myc coordinates diverse cell functions, through its ability to directly affect patterns of alternate RNA splicing for central signaling components.

Perinatal or Adult Nf1 Inactivation Using Tamoxifen-Inducible PlpCre Each Cause Neurofibroma Formation

Debra A. Mayes, Tilat A. Rizvi, Jose A. Cancelas, Nathan T. Kolasinski, Georgianne M. Ciraolo, Anat O. Stemmer-Rachamimov, and Nancy Ratner

Précis: This study of a pediatric human tumor suppressor gene illustrates that acute inactivation of a critical tumor suppressor gene can rapidly stimulate tumor growth even in adults.

Susceptible Stages in Schwann Cells for NF1-Associated Plexiform Neurofibroma Development

Lu Q. Le, Chiachi Liu, Tracey Shipman, Zhiguo Chen, Ueli Suter, and Luis F. Parada

Précis: This study identifies a specific period in which Schwann cell precursors show enhanced susceptibility to formation of neurofibroma, with implication for developing novel therapeutic approaches.

Stromal Niche Cells Protect Early Leukemic FLT3-ITD⁺ Progenitor Cells against First-Generation FLT3 Tyrosine Kinase Inhibitors

Amanda Parmar, Stefanie Marz, Sally Rushton, Christina Holzwarth, Katarina Lind, Sabine Kayser, Konstanze Döhner, Christian Peschel, Robert A. Oestendorp, and Katharina S. Götzte

Précis: Leukemic stem/progenitor cells can not be readily eradicated by FLT3 kinase inhibition in acute myeloid leukemia, due to robust protection of these cells by the bone marrow stromal microenvironment.

TGFβ/TNFα-Mediated Epithelial–Mesenchymal Transition Generates Breast Cancer Stem Cells with a Claudin-Low Phenotype

Michael K. Asiedu, James N. Ingle, Marshall D. Behrens, Derek C. Radisky, and Keith L. Knutson

Précis: This study explores the in vitro generation of stable breast cancer stem cells, a system with potential utility for therapeutic targeting and drug screening in breast cancer.

Akt2 Regulates All Akt Isoforms and Promotes Resistance to Hypoxia through Induction of miR-21 upon Oxygen Deprivation

Christos Polytarchou, Dimitrios Iliopoulos, Maria Hatziapostolou, Filippos Kottakis, Ioanna Maroulakou, Kevin Struhl, and Philip N. Tsichlis

Précis: Findings highlight the identification of a novel hypoxia-activated, Akt2-dependent pathway that contributes to tumor adaptation independent of HIF-1.

CORRECTIONS

Correction: Clinical Impact of Different Classes of Infiltrating T Cytotoxic and Helper Cells (Th1, Th2, Treg, Th17) in Patients with Colorectal Cancer

Correction: Targeting Tumor Hypoxia: Suppression of Breast Tumor Growth and Metastasis by Novel Carbonic Anhydrase IX Inhibitors

Correction: Reprogramming CD19-Specific T Cells with IL-21 Signaling Can Improve Adoptive Immunotherapy of B-Lineage Malignancies
ABOUT THE COVER

Low carbohydrate, high protein diets slow/prevent cancer. Mice fed low carbohydrate (Carbs), high protein diets have lower insulin (Ins) and blood glucose levels than mice on Western-like diets. If these mice are injected with tumor cells or are genetically predisposed to mammary tumors, the growth rate or incidence, respectively, of their tumors is significantly reduced. Moreover, these low Carb, high protein diets reduce tumor growth in an additive fashion when combined with the mTOR inhibitor CCI-779 or the COX-2 inhibitor Celebrex. For details, see the article by Ho and colleagues on page 4484 of this issue.
