MICROENVIRONMENT AND IMMUNOLOGY

4380 HER2 Overexpression Elicits a Proinflammatory IL-6 Autocrine Signaling Loop That Is Critical for Tumorigenesis
Zachary C. Hartman, Xiao-Yi Yang, Oliver Glass, Gangjun Lei, Takuya Osada, Sandeep S. Dave, Michael A. Morse, Timothy M. Clay, and Herbert K. Lyerly

Précis: HER2 activation in breast cancer is typically thought to act through tumor cell autonomous effects, but this is not the case, as revealed by these findings that HER2 activation also supports the inflammatory tumor microenvironment that is essential to license tumor cell growth.

Précis: MUC1 glycoprotein is essential for the growth and progression of pancreatic cancer via activation of the MAPK signaling pathway, blocking of which impedes cancer cell proliferation.

4443 MicroRNA Sequence and Expression Analysis in Breast Tumors by Deep Sequencing
Thalia A. Farazi, Hugo M. Horlings, Jelle J. ten Hoeve, Aleksandra Mihailovic, Hans Halfwerk, Pavel Morozov, Miguel Brown, Markus Hafner, Fabien Reyal, Marieke van Kouwenhove, Bas Kreike, Daoud Sie, Volker Hovestadt, Lodewyk F.A. Wessels, Marc J. van de Vijver, and Thomas Tuschl

Regina Golan-Gerstl, Michal Cohen, Asaf Shilo, Sung-Suk Suh, Arianna Bakàcs, Luigi Coppola, and Rotem Karni

Précis: Increasing evidence points to a critical role for dysregulated patterns of alternate splicing in tumorigenesis, here illustrated by the definition of an RNA splicing factor and its key targets that drive the formation of aggressive brain tumors.

Nicotinamide Blocks Proliferation and Induces Apoptosis of Chronic Lymphocytic Leukemia Cells through Activation of the p53/miR-34a/SIRT1 Tumor Suppressor Network
Valentina Audrito, Tiziana Vaisitti, Davide Rossi, Daniela Gottardi, Giovanni D’Arena, Luca Laurenti, Gianluca Gaidano, Fabio Malavasi, and Silvia Deaglio

Précis: Findings suggest a mechanistic rationale to combine vitamin B3 with DNA-damaging chemotherapeutics to improve therapeutic responses in chronic lymphocytic leukemia.

Ae Sin Lee, Duk Hoon Kim, Jung Eun Lee, Yu Jin Jung, Kyung Pyo Kang, Suk Lee, Sung Kwang Park, Jae Yong Kwak, Sang Yong Lee, Suk Tae Lim, Mi Jung Sung, Suk Ran Yoon, and Won Kim

Précis: Risks may exist for a treatment used widely in the oncology clinic to relieve chemotherapy-induced anemia, as a result of its ability to promote cancer progression by stimulating lymphangiogenesis and nodal metastasis.

ABOUT THE COVER

Low carbohydrate, high protein diets slow/prevent cancer. Mice fed low carbohydrate (Carbs), high protein diets have lower insulin (Ins) and blood glucose levels than mice on Western-like diets. If these mice are injected with tumor cells or are genetically predisposed to mammary tumors, the growth rate or incidence, respectively, of their tumors is significantly reduced. Moreover, these low Carb, high protein diets reduce tumor growth in an additive fashion when combined with the mTOR inhibitor CCI-779 or the COX-2 inhibitor Celebrex. For details, see the article by Ho and colleagues on page 4484 of this issue.
