## BREAKING ADVANCES

### Highlights from Recent Cancer Literature

### REVIEWS

#### Hedgehog Fights Back: Mechanisms of Acquired Resistance against Smoothened Antagonists

Ciara Metcalfe and Frederic J. de Sauvage

#### Chemotherapeutic Resistance: Surviving Stressful Situations

Luke A. Gilbert and Michael T. Hemann

### PRIORITY REPORTS

#### Combinatorial Treatments That Overcome PDGFRβ-Driven Resistance of Melanoma Cells to V600E-RAF Inhibition

Hubing Shi, Xiangju Kong, Antoni Ribas, and Roger S. Lo

**Précis:** This study illustrates the great importance of the interplay between clinical and laboratory-based research in responding rapidly to the inevitable problem of acquired resistance arising in the development of any new targeted treatment for cancer.

#### Mechanical Stiffness Grades Metastatic Potential in Patient Tumor Cells and in Cancer Cell Lines

**Précis:** Findings provide the first demonstration of the power law relation between the stiffness and the invasiveness of cancer cells and show that mechanical phenotypes, which are directly impacted by the state and architecture of the cytoskeleton, can be used to grade the metastatic potential of cell populations.

### CLINICAL STUDIES

#### Keap1 Mutations and Nrf2 Pathway Activation in Epithelial Ovarian Cancer

Panagiotis A. Konstantinopoulos, Dimitrios Spentzos, Elena Fountzilas, Nancy Francoeur, Srisowmya Sanisetty, Alexandros P. Grammatikos, Jonathan L. Hecht, and Stephen A. Cannistra

**Précis:** Findings reveal a key molecular determinant of resistance to platinum-based chemotherapy and poor clinical outcome in patients with epithelial ovarian cancers.

### INTEGRATED SYSTEMS AND TECHNOLOGIES

#### Tumor Microenvironment–Derived Proteins Dominate the Plasma Proteome Response during Breast Cancer Induction and Progression

Sharon J. Pitteri, Karen S. Kelly-Spratt, Kay E. Gurley, Jacob Kennedy, Tina Busald Buson, Alice Chin, Hong Wang, Qing Zhang, Cho-Hong Wong, Lewis A. Chodosh, Peter S. Nelson, Samir M. Hanash, and Christopher J. Kemp

**Précis:** Dynamic interactions between tumor cells and their host microenvironment are reflected by changes in the plasma proteome, offering new opportunities for cancer diagnosis.

### MICROENVIRONMENT AND IMMUNOLOGY

#### Myeloid-Derived Suppressor Cell Inhibition of the IFN Response in Tumor-Bearing Mice

**Précis:** Myeloid derived suppressor cells blunt immune cell responsiveness to interferons by producing reactive nitrogen species, which attenuates interferon signaling in immune cells of tumor-bearing animals.
PD-1/PD-L1 Interactions Contribute to Functional T-Cell Impairment in Patients Who Relapse with Cancer After Allogeneic Stem Cell Transplantation

Précis: Findings show how leukemia cells can escape from graft-versus-tumor immune responses, and how interfering with this escape mechanism can restore antitumor immunity and possibly prevent relapses.

Systemic Cancer Therapy with a Small Molecule Agonist of Toll-like Receptor 7 Can Be Improved by Circumventing TLR Tolerance
Carole Bourquin, Christian Hotz, Daniel Noerenberg, Andreas Voelkl, Simon Heidegger, Bettina Storch, Nadja Sandholzer, Cornelia Wurzenberger, David Anz, and Stefan Endres

Précis: Findings offer insight into a cellular mechanism of immune tolerance that occurs during cancer immunotherapy with a Toll-like receptor agonist and provide a strategy to bypass this tolerance.

Antibody-Dependent Cell Cytotoxicity Synapses Form in Mice during Tumor-Specific Antibody Immunotherapy
Pascale Hubert, Adèle Heitzmann, Sophie Viel, André Nicolas, Xavier Sastre-Garau, Pablo Oppezzo, Otto Pritsch, Eduardo Osinaga, and Sebastian Amigorena

Précis: Findings demonstrate that a therapeutic monoclonal antibody specific for a ubiquitous tumor-associated antigen inhibits tumor growth via antibody-dependent cell toxicity.

IGFBP-3 Is a Metastasis Suppression Gene in Prostate Cancer

Précis: This study reports the first transgenic mouse model of spontaneous metastatic prostate cancer, a milestone that may help advance studies of progression and treatment at this deadly late stage of disease.

18F-Fluorodeoxy-glucose Positron Emission Tomography Marks MYC-Overexpressing Human Basal-Like Breast Cancers
Nicolaos Palaskas, Steven M. Larson, Nikolaus Schultz, Evangelia Komisopoulou, Justin Wong, Dan Rohle, Carl Campos, Nicolas Yannuzzi, Joseph R. Osborne, Irina Linkov, Edward R. Kastenhuber, Richard Taschereau, Seema B. Plaisier, Chris Tran, Adriana Heguy, Hong Wu, Chris Sander, Michael E. Phelps, Cameron Brennan, Elisa Port, Jason T. Huse, Thomas G. Graeber, and Ingo K. Mellinghoff

Précis: FDG-PET may be useful as a noninvasive biomarker for therapies that target either the basal-like breast cancer subtype or MYC-overexpressing tumors that rely heavily upon glycolysis and the glutamine pathway.

Combining Betulinic Acid and Mithramycin A Effectively Suppresses Pancreatic Cancer by Inhibiting Proliferation, Invasion, and Angiogenesis
Yong Gao, Zhiliang Jia, Xiangyu Kong, Qiang Li, David Z. Chang, Daoyan Wei, Xiangdong Le, Shengdong Huang, Liwei Wang, Suyun Huang, and Keping Xie

Précis: Findings demonstrate that targeting the transcription factor Sp1 can inhibit pancreatic tumor growth with greater efficacy and fewer side effects than traditional treatment.
BMP4 Promotes Prostate Tumor Growth in Bone through Osteogenesis
Yu-Chen Lee, Chien-Jui Cheng, Mehmet A. Bilen, Jing-Fang Lu, Robert L. Satcher, Li-Yuan Yu-Lee, Gary E. Gallick, Sankar N. Maity, and Sue-Hwa Lin

Précis: Osteogenesis is shown to be necessary for prostate cancer progression in bone and inhibition of this process may offer a treatment strategy for bone metastases.

Akt-Dependent Glucose Metabolism Promotes Mcl-1 Synthesis to Maintain Cell Survival and Resistance to Bcl-2 Inhibition
Jonathan L. Coloff, Andrew N. Macintyre, Amanda G. Nichols, Tingyu Liu, Catherine A. Gallo, David R. Plas, and Jeffrey C. Rathmell

Précis: Inhibition of glucose metabolism alters expression of a key Bcl-2 family member, sensitizing cancer cells to apoptosis and illustrating how strategies to disrupt glycolysis disruptions may disable tumors.

MicroRNA Replacement Therapy for miR-145 and miR-33a Is Efficacious in a Model of Colon Carcinoma
Ahmed Fawzy Ibrahim, Ulrike Weirauch, Maren Thomas, Arnold Grünweller, Roland K. Hartmann, and Achim Aigner

Précis: This study establishes nonviral miRNA replacement therapy for cancer treatment.

Combined Gene Expression Profiling and RNAi Screening in Clear Cell Renal Cell Carcinoma Identify PLK1 and Other Therapeutic Kinase Targets
Yan Ding, Dan Huang, Zhongla Zhang, Josh Smith, David Petillo, Brendan D. Looyenga, Kristin Feenstra, Jeffrey P. MacKeigan, Kyle A. Furge, and Bin T. Teh

Précis: RNAi screening and gene expression profiling reveal new potential therapeutic targets to treat highly aggressive kidney cancers.

Exosome Targeting of Tumor Antigens Expressed by Cancer Vaccines Can Improve Antigen Immunogenicity and Therapeutic Efficacy
Ryan B. Bountree, Stefanie J. Mandl, James M. Nachtwey, Katie Dalpozzo, Lisa Do, John R. Lombardo, Peter L. Schoonmaker, Kay Brinkmann, Ulrike Dirmeier, Reiner Laus, and Alain Delcayre

Précis: This study shows how engineering the MVA-BN-PRO vaccine to express its antigens in secreted exosomes could greatly improve its immunotherapeutic activity.

Retinoic Acid Enhances TRAIL-Induced Apoptosis in Cancer Cells by Upregulating TRAIL Receptor 1 Expression
Latha Dhandapani, Ping Yue, Suresh S. Ramalingam, Fabio R. Khuri, and Shi-Yong Sun

Précis: By establishing that retinoic acid can stimulate the proapoptotic activity of TRAIL by upregulating the TRAIL receptor DR4, this study suggests a strategy to augment the anticancer activity of TRAIL being studied in clinical trials.

A Drug Resistance Screen Using a Selective MET Inhibitor Reveals a Spectrum of Mutations That Partially Overlap with Activating Mutations Found in Cancer Patients
Ralph Tiedt, Elisa Degenkolbe, Pascal Furet, Brent A. Appleton, Sabrina Wagner, Joseph Schoepfer, Emily Buck, David A. Buddy, John E. Monahan, Michael D. Jones, Jutta Blank, Dorothea Haesen, Peter Drueckes, Markus Wartmann, Clive McCarthy, William R. Sellers, and Francesco Hofmann

Précis: Drug resistance mutation profiles reported in this manuscript are likely to predict clinical responses to MET kinase inhibitors, a number of which are currently in development.

Overcoming Hypoxia-Induced Apoptotic Resistance through Combinatorial Inhibition of GSK-3β and CDK1

Précis: Findings elucidate a novel therapeutic strategy to overcome the inherent resistance of hypoxic cancer cells to cell death, by targeting two kinases not previously linked to cell death protection in hypoxic tumor microenvironments.

5361 Correction: A Requirement of STAT3 DNA Binding Precludes Th-1 Immunostimulatory Gene Expression by NF-κB in Tumors

ABOUT THE COVER

The search for biomarkers of cancer has focused on the tumor cells themselves. Pitteri and colleagues, using an unbiased and in depth proteomic analysis of plasma from a model of Her2/neu driven breast cancer, have identified the signaling between the tumor cells and microenvironment as a primary source of biomarkers. Shown are tumor cells embedded within extensive extracellular collagen matrix stained with trichrome blue. For details, see the article by Pitteri and colleagues on page 5090 of this issue.
