RESUSCITATING WILD-TYPE p53 EXPRESSION BY DISRUPTING CERAMIDE GLYCOSYLATION: A NOVEL APPROACH TO TARGET MUTANT p53 TUMORS
Yong-Yu Liu

TREATMENT OF HEMATOLOGIC MALIGNANCIES WITH IMMUNOTOXINS AND ANTIBODY-DRUG CONJUGATES
David J. FitzGerald, Alan S. Wayne, Robert J. Kreitman, and Ira Pastan

EVOLUTION OF TUMOR INVASIVENESS: THE ADAPTIVE TUMOR MICROENVIRONMENT LANDSCAPE MODEL
Hyung-Ok Lee, Ariosto S. Silva, Susanna Concilio, Yue-Sheng Li, Michael Slifker, Robert A. Gatenby, and Jonathan D. Cheng

P38ɣ PROMOTES BREAST CANCER CELL MOTILITY AND METASTASIS THROUGH REGULATION OF RHOC GTPASE, CYTOSKELETAL ARCHITECTURE, AND A NOVEL LEADING EDGE BEHAVIOR

ANTIANGIOGENIC AGENT SUINITINIB TANGENTLY INCREASES TUMOR OXYGENATION AND SUPPRESSES CYCLING HYP oxia
Shingo Matsumoto, Sonny Batra, Keita Saito, Hironobu Yasui, Rajani Choudhuri, Chandramouli Gadisetti, Sankaran Subramanian, Nallathamby Devasaahayam, Jeeva P. Munasinghe, James B. Mitchell, and Murali C. Krishna

REGULATOR OF G PROTEIN SIGNALING 6 MEDIATES DOXORUBICIN-INDUCED ATM AND p53 ACTIVATION BY A REACTIVE OXYGEN SPECIES–DEPENDENT MECHANISM
Jie Huang, Jianqi Yang, Riswanath Maitly, Daisuke Mayuzumi, and Rory A. Fisher

LONG NONCODING RNA ROTAIR REGULATES POLYCOMB-DEPENDENT CHROMATIN MODIFICATION AND IS ASSOCIATED WITH POOR PROGNOSIS IN COLORECTAL CANCERS
Ryunosuke Kogo, Teppei Shimamura, Koshi Mimori, Kohichi Kawahara, Seiya Imoto, Tomoya Sudo, Fumiaki Tanaka, Kohbi Shibata, Akira Suzuki, Shizuo Komune, Satoru Miyano, and Masaki Mori

October 15, 2011 • Volume 71 • Number 20

A Journal of the American Association for Cancer Research www.aacrjournals.org
Activation of the Glucocorticoid Receptor Is Associated with Poor Prognosis in Estrogen Receptor-Negative Breast Cancer
Deng Pan, Masha Kocherginsky, and Suzanne D. Conzen

**Précis:** By identifying the glucocorticoid receptor as a key driver of central pathways of chemotherapy resistance and metastasis, this important study may help explain the basis for the poor prognosis of a subset of ER-negative breast cancers.

---

Tumor-Associated Macrophages Mediate Immunosuppression in the Renal Cancer Microenvironment by Activating the 15-Lipoxygenase-2 Pathway
Irina Daurkin, Evgeniy Eruslanov, Taryn Gilbert, George Q. Perrin, Chester Algood, Scott M. Gilbert, Charles J. Rosser, Li-Ming Su, Johannes Vieweg, and Sergei Kusmartsev

**Précis:** Findings define a specific lipoxygenase that is essential for tumor-associated macrophages to nurture the tumor microenvironment by driving immune escape.

---

Glioblastoma Angiogenesis and Tumor Cell Invasiveness Are Differentially Regulated by β8 Integrin
Jeremy H. Tchaicha, Steve B. Reyes, Jaekyung Shin, Mohammad G. Hossain, Frederick F. Lang, and Joseph H. McCarty

**Précis:** This mechanistic study reveals how autocrine activation of TGF-β signaling pathways by integrin β8 differentially regulates angiogenesis versus invasion in deadly brain tumors.

---

TLR9 Agonists Oppositely Modulate DNA Repair Genes in Tumor versus Immune Cells and Enhance Chemotherapy Effects
Michele Sommariva, Loris De Cecco, Michelandrea De Cesare, Lucia Sfondrini, Sylvie Ménard, Cecilia Melani, Domenico Delia, Nadia Zaffaroni, Graziella Pratesi, Valentina Uva, Elda Tagliabue, and Andrea Balsari

**Précis:** Findings encourage clinical development of treatment protocols in which intratumoral injection of an immune stimulatory agent is combined with systemic DNA damaging therapies.

---

Asialoglycoprotein Receptor Promotes Cancer Metastasis by Activating the EGFR–ERK Pathway
Suguru Ueno, Marija Mojic, Yoshimi Ohashi, Nobuaki Higashi, Yoshihiro Hayakawa, and Tatsuro Irimura

**Précis:** Hepatic lectins are a metastatic stimulus in the lung tumor microenvironment by acting as a positive modifier of EGFR-ERK signaling.

---

Immune Adjuvant Efficacy of CpG Oligonucleotide in Cancer Treatment Is Founded Specifically upon TLR9 Function in Plasmacytoid Dendritic Cells

**Précis:** This study unravels the mechanistic basis for the immune adjuvant effects of CpG oligonucleotide, with implications on how to use it most effectively in combinatorial immunochemotherapy regimens.
MOLECULAR AND CELLULAR PATHOBIOLOGY

Enhancement of TGF-β Signaling Responses by the E3 Ubiquitin Ligase Arkadia Provides Tumor Suppression in Colorectal Cancer
Vikas Sharma, Anna G. Antonacopoulou, Shinya Tanaka, Alexis A. Panoutsopoulos, Vasiliki Bravou, Haralabos P. Kalofonos, and Vasso Episkopou

Précis: The definition of a ubiquitin ligase that determines the positive versus negative functions of transforming growth factor-β in colon cancer may advance understanding of its dual nature during tumorigenesis.

miR-152 Is a Tumor Suppressor microRNA That Is Silenced by DNA Hypermethylation in Endometrial Cancer
Tomohiko Tsuruta, Ken-ichi Kozaki, Atsushi Uesugi, Mayuko Furuta, Akira Hirasawa, Issei Imoto, Nobuyuki Susumu, Daisuke Aoki, and Joji Inazawa

Précis: The etiology and development of human cancers that are poorly understood may be enlightened by defining tumor suppressor microRNAs, as illustrated in this function-based screen in endometrial cancers.

Pivotal Role of Reduced let-7g Expression in Breast Cancer Invasion and Metastasis
Pengxu Qian, Zehua Zuo, Zhengsheng Wu, Xianyi Meng, Gaopeng Li, Zhengzhou Wu, Weijie Zhang, Sheng Tan, Vijay Pandey, Yandan Yao, Puyue Wang, Liqing Zhao, Jun Wang, Qiang Wu, Erwei Song, Peter E. Lobie, Zihan Yin, and Tao Zhu

Précis: Only one of several let-7 miRNA family members serves as a prognostic biomarker in breast cancer that promotes breast cancer invasion and metastasis.

Loss of Transcription Factor KLF5 in the Context of p53 Ablation Drives Invasive Progression of Human Squamous Cell Cancer
Yizeng Yang, Hiroshi Nakagawa, Marie-Pier Tetreault, Janelle Billig, Noel Victor, Abha Goyal, Antonia R. Sepulveda, and Jonathan P. Katz

Précis: Findings identify a secondary event that cooperates with p53 mutation to drive malignant conversion of human squamous carcinomas.

THERAPEUTICS, TARGETS, AND CHEMICAL BIOLOGY

Long-lived Inflammatory Signaling in Irradiated Bone Marrow Is Genome Dependent
Sally A. Lorimore, Debayan Mukherjee, Joanne I. Robinson, Jennifer A. Chrysal, and Eric G. Wright

Précis: This study suggests that radiation exposure produces a surprisingly durable procarcinogenic inflammatory effect that may differ on a genetic basis in different individuals, perhaps helping explain why some individuals are at greater risk of radiation-induced cancers than others despite similar initial levels of radiation-induced DNA damage.

Tissue Factor–Activated Coagulation Cascade in the Tumor Microenvironment Is Critical for Tumor Progression and an Effective Target for Therapy
Yuan Liu, Pengfei Jiang, Katerina Capkova, Dong Xue, Longwu Ye, Suhash C. Sinha, Nigel Mackman, Kim D. Janda, and Cheng Liu

Précis: Targeting the coagulation cascade activated in the tumor microenvironment may be a highly effective strategy for therapeutic eradication of metastatic cancer.

Intratumoral De Novo Steroid Synthesis Activates Androgen Receptor in Castration-Resistant Prostate Cancer and Is Upregulated by Treatment with CYP17A1 Inhibitors
Changmeng Cai, Sen Chen, Patrick Ng, Glenn J. Bubley, Peter S. Nelson, Elahe A. Mostaghel, Brett Marck, Alvin M. Matsumoto, Nicholas I. Simon, Hongyun Wang, Shaoyong Chen, and Steven P. Balk

Précis: In castration-resistant prostate cancers, the activity of the androgen receptor may still rely upon de novo steroid synthesis in the tumor, which may respond to therapies that can suppress this synthesis.
Oncogene **AEG-1** Promotes Glioma-Induced Neurodegeneration by Increasing Glutamate Excitotoxicity

Seok-Geun Lee, Keetae Kim, Timothy P. Kegelman, Rupesh Dash, Swadesh K. Das, Jung Kyoung Choi, Luni Emdad, Eric L. Howlett, Hyun Yong Jeon, Zhao Zhong Su, Byoung Kwon Yoo, Devanand Sarkar, Sung-Hoon Kim, Dong-Chul Kang, and Paul B. Fisher

**Précis:** By providing insights into how gliomas induce neurodegeneration, a hallmark of this deadly cancer, the findings suggest novel entry points for developing targeted therapies to improve its treatment.

ZNF668 Functions as a Tumor Suppressor by Regulating p53 Stability and Function in Breast Cancer

Ruozhen Hu, Guang Peng, Hui Dai, Eun-Kyoung Breuer, Katherine Stemke-Hale, Kaiyi Li, Ana M. Gonzalez-Angulo, Gordon B. Mills, and Shiaw-Yih Lin

**Précis:** Genome-wide studies had identified the subject of this study previously as a frequently mutated gene in breast cancer, but its role and function in p53 control were unknown until now.

Haploinsufficiency in the Prometastasis Kiss1 Receptor Gpr54 Delays Breast Tumor Initiation, Progression, and Lung Metastasis

Sung-Gook Cho, Ying Wang, Melissa Rodriguez, Kunrong Tan, Wenzheng Zhang, Jian Luo, Dali Li, and Mingyao Liu

**Précis:** Mice lacking the prometastatic receptor Kiss1R are resistant to breast cancer due to deficiencies in Rho signaling.

A Role for Bone Morphogenetic Protein-4 in Lymph Node Vascular Remodeling and Primary Tumor Growth

Rae H. Farnsworth, Tara Karnezis, Ramin Shayan, Masataka Matsumoto, Cameron J. Nowell, Marc G. Achen, and Steven A. Stacker

**Précis:** This study identifies a TGFβ-related growth factor that negatively regulates aspects of the metastatic niche formation in tumor-draining lymph nodes, acting to control both seed and soil in the metastatic process.

**ABOUT THE COVER**

Breast tumor development in 7-week-old PyMT/Kiss1r++/− mouse. Whole mounting of the fourth inguinal mammary fat pad of 7-week-old PyMT/Kiss1r++/− mouse shows hyperplastic nodules. Kiss1r heterozygosity in MMTV-PyMT mouse reduced hyperplastic nodule numbers and delayed tumor initiation and formation. For details, see the article by Cho and colleagues on page 6535 of this issue.
