A Germline Variant in the Interferon Regulatory Factor 4 Gene as a Novel Skin Cancer Risk Locus
Jiali Han, Abrar A. Qureshi, Hongmei Nan, Jiangwen Zhang, Yiqing Song, Qun Guo, and David J. Hunter

Précis: A single nucleotide polymorphism identified in a key immune regulatory transcription factor associates with elevated risk of the most common types of skin cancer.

Increased Efficacy of Breast Cancer Chemotherapy in Thrombocytopenic Mice
Mélanie Demers, Benoît Ho-Tin-Noé, Daphne Schatzberg, Janie J. Yang, and Denis D. Wagner

Précis: Depleting platelets in tumor-bearing mice preferentially increases the leakiness of the tumor vasculature, leveraging the efficacy of administered chemotherapies without worsening toxic side effects.

Gap Junction–Mediated Import of MicroRNA from Bone Marrow Stromal Cells Can Elicit Cell Cycle Quiescence in Breast Cancer Cells
Philip K. Lim, Sarah A. Bliss, Shyam A. Patel, Marcelo Taborga, Meneka A. Dave, Larissa A. Gregory, Steven J. Greco, Margarette Bryan, Prem S. Patel, and Pranela Rameshwar

Précis: Cellular exchange of microRNAs is emerging as a fascinating new mechanism by which tumor stromal cells can influence the tumor cell pathophysiology.

LOXL2-Mediated Matrix Remodeling in Metastasis and Mammary Gland Involution
Holly E. Barker, Joan Chang, Thomas R. Cox, Georgina Lang, Demelza Bird, Monica Nicolau, Holly R. Evans, Alison Gartland, and Janine T. Erler

Précis: Findings offer preclinical evidence that breast cancer metastasis can be blocked by targeting an important oxidase in the tumor microenvironment.
Reduced VEGF Production, Angiogenesis, and Vascular Regrowth Contribute to the Antitumor Properties of Dual mTORC1/mTORC2 Inhibitors
Beverly L. Falcon, Sharon Barr, Prafulla C. Gokhale, Jeyling Chou, Jennifer Fogarty, Philippe Depeille, Mark Miglarese, David M. Epstein, and Donald M. McDonald

Précis: Small molecule inhibitors now in clinical development to block both mTORC kinases can leverage the antiangiogenic actions of VEGF inhibitors.

Stromal Deletion of the APC Tumor Suppressor in Mice Triggers Development of Endometrial Cancer
Pradeep S. Tanwar, LiHua Zhang, Drucilla J. Roberts, and Jose M. Teixeira

Précis: This interesting mouse model study suggests that tumor suppressor alterations in stromal tissue may be sufficient to drive progression of some types of cancer.

Natural Killer Cells Efficiently Reject Lymphoma Silenced for the Endoplasmic Reticulum Aminopeptidase Associated with Antigen Processing
Loredana Cifaldi, Elisa Lo Monaco, Matteo Forloni, Ezio Giorda, Silvia Lorenzi, Stefania Petrimi, Elisa Tremante, Daniela Pende, Franco Locatelli, Patrizio Giacomini, and Doriana Fruci

Précis: Findings highlight a novel immunotherapeutic target that is tractable for small molecule inhibition and that could be broadly relevant to many types of human cancer.

TLR3 as a Biomarker for the Therapeutic Efficacy of Double-stranded RNA in Breast Cancer
Bruno Salaun, Laurence Zitvogel, Carine Asselin-Paturel, Yannis Morel, Karine Chemin, Clarisse Dubois, Catherine Massacrier, Rosa Conforti, Marie Pierre Chenard, Jean-Christophe Sabourin, Aicha Goubar, Serge Lebecque, Michel Pierres, Donata Rimoldi, Pedro Romero, and Fabrice Andre

Précis: Toll receptors that control innate immune response are not only expressed by immune cells but also by many human cancer cells, which might be targeted directly by Toll receptor agonists in certain disease settings.

Novel Role for STAT3 in Transcriptional Regulation of NK Immune Cell Targeting Receptor MICA on Cancer Cells
Romain Bedel, Antoine Thiery-Vuillemin, Camille Grandclement, Jeremy Ballard, Jean-Paul Remy-Martin, Berndette Kantelip, Jean-Rene Pallandre, Xavier Pivot, Christophe Ferrand, Pierre Tiberghien, and Christophe Borg

Précis: Findings reveal a novel mechanism by which STAT3 modulates immunosurveillance by NK immune cells, by repressing the expression of a key NK cell recognition molecule on cancer cells.

Mast Cell 5-Lipoxygenase Activity Promotes Intestinal Polyposis in APC
d468 Mice
Eric C. Cheon, Khashayarsha Khazaie, Mohammad W. Khan, Matthew J. Strouch, Seth B. Krantz, Joseph Phillips, Nichole R. Blatner, Laura M. Hix, Ming Zhang, Kristen L. Dennis, Mohammed R. Salabat, Michael Heiferman, Paul J. Grippi, Hidayatullah G. Munshi, Elias Gounaris, and David J. Bentrem

Précis: Findings suggest that the established role of arachadonic acid biosynthesis in colon tumorigenesis may be driven to a large degree from mast cells that support myeloid-derived suppressor cells, an important component of the tumor microenvironment thought to drive immune escape.

Peroxiredoxin 1 Controls Prostate Cancer Growth through Toll-Like Receptor 4–Dependent Regulation of Tumor Vasculature
Jonah R. Riddell, Wiam Bshara, Michael T. Moser, Joseph A. Spernyak, Barbara A. Foster, and Sandra O. Gollnick

Précis: This study defines a tumor-derived inducer of inflammation that provides an important mechanistic link between chronic inflammation and prostate carcinogenesis.

The HIF-1–Inducible Lysyl Oxidase Activates HIF-1 via the Akt Pathway in a Positive Regulation Loop and Synergizes with HIF-1 in Promoting Tumor Cell Growth
Floriane Pez, Frédéric Dayan, Jérôme Durivault, Bastien Kaniewski, Géraldine Aimond, Gabrielle S. Le Provost, Blandine Deux, Philippe Clézardin, Pascal Sommer, Jacques Pouysségur, and Caroline Reynaud

Précis: Findings reveal a regulatory cycle that can act synergistically to favor cancer cell proliferation in hypoxic tumor microenvironments.
The Role of Calcium in the Activation of Estrogen Receptor-Alpha
Shailaja D. Divekar, Geoffrey B. Storchman, Katherine Sperle, David J. Veselik, Earl Johnson, Sivanesan Dakshnamurthy, Yuse N. Lajiminmuhip, Rebecca E. Nakles, Li Huang, and Mary Beth Martin

Précis: Results shed light on a potentially important mechanism involved in estrogen mimicry at the estrogen receptor-alpha, with implications for understanding breast cancer risk and the development of novel therapeutics for treatment of endocrine independent breast cancer.

Ulcerative Colitis–Associated Colorectal Cancer Arises in a Field of Short Telomeres, Senescence, and Inflammation
Rosa Ana Risques, Lisa A. Lai, Cigdem Himmetoglu, Anoosheh Ebaee, Lin Li, Ziding Feng, Mary P. Bronner, Bassel Al-Lahham, Kris V. Kowdley, Keith D. Lindor, Peter S. Rabinovitch, and Teresa A. Brentnall

Précis: In patients with ulcerative colitis, cell senescence acts as a tumor suppressor mechanism that is abrogated during the transition from low-grade to high-grade dysplasia.

MicroRNAs miR-199a-5p and -3p Target the Brm Subunit of SWI/SNF to Generate a Double-Negative Feedback Loop in a Variety of Human Cancers
Kouhei Sakurai, Chihiro Furukawa, Takeshi Haraguchi, Ken-ichi Inada, Kazuya Shiogama, Takanobu Tagawa, Shuji Fujita, Yoshihito Ueno, Aya Ogata, Mai Ito, Yutaka Tsutsumi, and Hideo Iba

Précis: Findings describe an microRNA-based mechanism constituting a double feedback loop for control of a pivotal chromatin remodeling factor in cancer cells.

Cyclin D1 Inhibits Mitochondrial Activity in B Cells
Guergana Tchakarska, Mikel Roussel, Xavier Troussard, and Brigitte Sola

Précis: Results identify a new function of cyclin D1 that could help explain its important pathophysiological roles in lymphomas and solid tumors.

Select Heterozygous Keap1 Mutations Have a Dominant-Negative Effect on Wild-Type Keap1 In Vivo
Takafumi Suzuki, Jonathan Maher, and Masayuki Yamamoto

Précis: A single-hit mutation in Keap1, a key regulator of the important cytoprotective gene Nrf2, is sufficient to generate a selective advantage in the cancer microenvironment.
**PREVENTION AND EPIDEMIOLOGY**

| 1763 | Long-term Use of Cholesterol-Lowering Drugs and Cancer Incidence in a Large United States Cohort |
| Eric J. Jacobs, Christina C. Newton, Michael J. Thun, and Susan M. Gapstur |
| Précis: In this large prospective study, long-term use of cholesterol-lowering drugs was associated with lower risk of melanoma, endometrial cancer, and non-Hodgkin lymphoma. |

| 1816 | Discovery of DNA Repair Inhibitors by Combinatorial Library Profiling |
| Benjamin J. Moeller, Richard L. Sidman, Renata Pasqualini, and Wadieh Arap |
| Précis: Combinatorial profiling of double-strand DNA break repair machinery yields peptides capable of modulating DNA repair phenotypes and sensitizing tumor cells to genotoxic therapy. |

**THERAPEUTICS, TARGETS, AND CHEMICAL BIOLOGY**

| 1772 | Using a Stem Cell–Based Signature to Guide Therapeutic Selection in Cancer |
| Igor Shats, Michael L. Gatza, Jeffrey T. Chang, Seiichi Mori, Jialiang Wang, Jeremy Rich, and Joseph R. Nevins |
| Précis: Findings suggest strategies for therapeutic targeting of a stem-like phenotype in a relevant cohort of cancer patients. |

| 1781 | Deoxycytidine Kinase Modulates the Impact of the ABC Transporter ABCG2 on Clofarabine Cytotoxicity |
| Shinjiro Nagai, Kazumasa Takenaka, Deepa Nachagari, Charles Rose, Kali Domoney, Dazi Sun, Alex Sparreboom, and John D. Schuetz |
| Précis: Findings show how an cellular efflux transporter can circumvent a major pathway to activate therapeutic nucleoside mimetic drugs. |

| 1805 | Use of Macrophages to Target Therapeutic Adenovirus to Human Prostate Tumors |
| Précis: Findings describe the use of macrophages to target an oncolytic adenovirus to hypoxic areas of prostate tumors, to improve viral inhibition of primary and secondary tumor growth. |

| 1825 | CNT1 Expression Influences Proliferation and Chemosensitivity in Drug-Resistant Pancreatic Cancer Cells |
| Yangzom D. Bhutia, Sau Wai Hung, Bhavi Patel, Dylan Lovin and Rajgopal Govindarajan |
| Précis: Findings suggest an effective strategy to defeat chemoresistance in human pancreatic cancers, which remains a primary clinical challenge. |

| 1849 | Therapeutic Inhibition of MAP Kinase Interacting Kinase Blocks Eukaryotic Initiation Factor 4E Phosphorylation and Suppresses Outgrowth of Experimental Lung Metastases |
| Précis: Findings offer initial preclinical proof-of-concept for small molecule blockade of a important translational regulator as a tractable cancer therapeutic approach. |

| 1858 | Chromosomal Instability Confers Intrinsic Multidrug Resistance |
| Précis: Determining the chromosome instability status of patient tumors may provide useful information on the clinical response to many cytotoxic agents and small molecules. |
Tumor and Stem Cell Biology

Trastuzumab Has Preferential Activity against Breast Cancers Driven by HER2 Homodimers

Précis: Findings suggest that the dimeric state of an oncogenic receptor in cancer cells may impact their therapeutic response to antireceptor antibodies.

Distinct TRAIL Resistance Mechanisms Can Be Overcome by Proteasome Inhibition but not Generally by Synergizing Agents
Christina Menke, Lianghua Bin, Jacqueline Thorburn, Kian Behbakht, Heide L. Ford, and Andrew Thorburn

Précis: This study rationalizes anticancer combinations that not only synergize but also overcome drug resistance, a primary challenge in cancer care.

Functional Activation of the Estrogen Receptor-α and Aromatase by the HDAC Inhibitor Entinostat Sensitizes ER-Negative Tumors to Letrozole
Gauri J. Sabnis, Olga Goloubeva, Saranya Chumsri, Nguyen Nguyen, Saraswati Sukumar, and Angela M.H. Brodie

Précis: This incisive and important preclinical study shows how using histone deacetylase inhibitors to restore ER expression in ER-negative tumors can be used to sensitize them to the therapeutic effects of aromatase inhibitors.

6-Thioguanine Reactivates Epigenetically Silenced Genes in Acute Lymphoblastic Leukemia Cells by Facilitating Proteasome-mediated Degradation of DNMT1
Bifeng Yuan, Jing Zhang, Hongxia Wang, Lei Xiong, Qian Cai, Tina Wang, Steven Jacobsen, Sriharsa Pradhan, and Yinsheng Wang

Précis: This study reveals a vital mechanistic connection between the widely employed cancer drug 6-thioguanine and its effects on DNA hypomethylation, with implications for understanding therapeutic efficacy.

The Epithelial-Mesenchymal Transition Mediator S100A4 Maintains Cancer-Initiating Cells in Head and Neck Cancers
Jeng-Fan Lo, Cheng-Chia Yu, Shih-Hua Chiou, Chih-Yang Huang, Chia-Iang Jan, Shu-Chun Lin, Chung-Ji Liu, Wen-Yuan Hu, and Yau-Hua Yu

Précis: A calcium-binding molecule that is prognostic in several cancers is found to be critical to maintain stemness properties, with implications for new cancer targeting strategies.

Prediction and Genetic Demonstration of a Role for Activator E2Fs in Myc-Induced Tumors
Kenichiro Fujinara, Iney Yuwanita, Daniel P. Hollern, and Eran R. Andrechek

Précis: This study establishes the root causal relationships between Myc and E2F, two key transcription factors involved in virtually all human cancers.

The ΔNp63 Proteins Are Key Allies of BRCA1 in the Prevention of Basal-Like Breast Cancer

Précis: Findings define an important transcriptional target of BRCA1 that may provide insight into the pathogenesis of basal-like breast cancers, an aggressive but poorly understood disease.

Ron Kinase Transphosphorylation Sustains MET Oncogene Addiction
Silvia Benvenuti, Luca Lazzari, Addolora Arnesano, Giulia Li Chiavi, Alessandra Gentile, and Paolo M. Comoglio

Précis: Insights into how oncogenic addiction is maintained to the MET kinase, which drives a powerful program of invasive growth in cancer cells, suggest strategies to strengthen cancer therapies based on MET inhibition.

ABOUT THE COVER

Photograph showing skinfold chambers with implanted mammary carcinoma in mice with normal (large image) and low (small image) platelet counts. Thrombocytopenia resulted in specific bleeding of the tumor. The lack of platelets induced breaches in the tumor vasculature that promoted extravasation of red blood cells and specifically increased the delivery of chemotherapeutic agents into the tumor. Thus, by favoring accumulation of the drug at the tumor site, low platelet count improved its effects and reduced tumor growth. For details, see the article by Demers and colleagues on page 1540 of this issue.
