A Germline Variant in the Interferon Regulatory Factor 4 Gene as a Novel Skin Cancer Risk Locus
Jiali Han, Abrar A. Qureshi, Hongmei Nan, Jiangwen Zhang, Yiqing Song, Qun Guo, and David J. Hunter

Précis: A single nucleotide polymorphism identified in a key immune regulatory transcription factor associates with elevated risk of the most common types of skin cancer.

Increased Efficacy of Breast Cancer Chemotherapy in Thrombocytopenic Mice
Mélanie Demers, Benoît Ho-Tin-Noé, Daphne Schatzberg, Janie J. Yang, and Denisa D. Wagner

Précis: Depleting platelets in tumor-bearing mice preferentially increases the leakiness of the tumor vasculature, levering the efficacy of administered chemotherapies without worsening toxic side effects.

Cellular exchange of microRNAs is emerging as a fascinating new mechanism by which tumor stromal cells can influence the tumor cell pathophysiology.

Findings offer preclinical evidence that breast cancer metastasis can be blocked by targeting an important oxidase in the tumor microenvironment.
Reduced VEGF Production, Angiogenesis, and Vascular Regrowth Contribute to the Antitumor Properties of Dual mTORC1/mTORC2 Inhibitors
Beverly L. Falcon, Sharon Barr, Prafulla C. Gokhale, Jeyling Chou, Jennifer Fogarty, Philippe Depeille, Mark Miglarese, David M. Epstein, and Donald M. McDonald

Précis: Small molecule inhibitors now in clinical development to block both mTORC kinases can leverage the antiangiogenic actions of VEGF inhibitors.

Stromal Deletion of the APC Tumor Suppressor in Mice Triggers Development of Endometrial Cancer
Pradeep S. Tanwar, LiHua Zhang, Drucilla J. Roberts, and Jose M. Teixeira

Précis: This interesting mouse model study suggests that tumor suppressor alterations in stromal tissue may be sufficient to drive progression of some types of cancer.

Natural Killer Cells Efficiently Reject Lymphoma Silenced for the Endoplasmic Reticulum Aminopeptidase Associated with Antigen Processing
Loredana Cifaldi, Elisa Lo Monaco, Matteo Forloni, Ettore Giorda, Silvia Lorenzi, Stefania Petini, Elisa Tremante, Daniela Pende, Franco Locatelli, Patrizio Giaconomi, and Doriana Fruci

Précis: Findings highlight a novel immunotherapeutic target that is tractable for small molecule inhibition and that could be broadly relevant to many types of human cancer.

TLR3 as a Biomarker for the Therapeutic Efficacy of Double-stranded RNA in Breast Cancer
Bruno Salaun, Laurence Zitvogel, Carine Asselin-Paturel, Yannis Morel, Karine Chemin, Clarisse Dubois, Catherine Massacrier, Rosa Conforti, Marie Pierre Chenard, Jean-Christophe Sabourin, Aicha Goubar, Serge Lebecque, Michel Pierres, Donata Rimoldi, Pedro Romero, and Fabrice Andre

Précis: Toll receptors that control innate immune response are not only expressed by immune cells but also by many human cancer cells, which might be targeted directly by Toll receptor agonists in certain disease settings.

Novel Role for STAT3 in Transcriptional Regulation of NK Immune Cell Targeting Receptor MICA on Cancer Cells
Romain Bedel, Antoine Thiery-Vuillermoz, Camille Grandelement, Jeremy Ballard, Jean-Paul Remy-Martin, Bernadette Kantelip, Jean-Rene Pallandre, Xavier Pivot, Christophe Ferrand, Pierre Tiberghien, and Christophe Borg

Précis: Findings reveal a novel mechanism by which STAT3 modulates immunosurveillance by NK immune cells, by repressing the expression of a key NK cell recognition molecule on cancer cells.

Mast Cell 5-Lipooxygenase Activity Promotes Intestinal Polyposis in APC−/− Mice
Eric C. Cheon, Khashayarsha Kazaia, Mohammad W. Khan, Matthew J. Strouch, Seth B. Krantz, Joseph Phillips, Nichole R. Blatner, Laura M. Hix, Ming Zhang, Kristen L. Dennis, Mohammad R. Salamat, Michael Heiferman, Paul J. Grippo, Hidayatullah G. Munshi, Elias Gounaris, and David J. Bentrem

Précis: Findings suggest that the established role of arachidonic acid biosynthesis in colon tumorigenesis may be driven to a large degree from mast cells that support myeloid-derived suppressor cells, an important component of the tumor microenvironment thought to drive immune escape.

Peroxiredoxin 1 Controls Prostate Cancer Growth through Toll-Like Receptor 4–Dependent Regulation of Tumor Vasculature
Jonah R. Riddell, Wiam Bshara, Michael T. Moser, Joseph A. Sperryak, Barbara A. Foster, and Sandra O. Gollnick

Précis: This study defines a tumor-derived inducer of inflammation that provides an important mechanistic link between chronic inflammation and prostate carcinogenesis.

The HIF-1–Inducible Lysyl Oxidase Activates HIF-1 via the Akt Pathway in a Positive Regulation Loop and Synergizes with HIF-1 in Promoting Tumor Cell Growth
Florean Pez, Frédéric Dayan, Jérôme Durivault, Bastien Kaniewski, Géraldine Almond, Gabrielle S. Le Provost, Blandine Deux, Philippe Clézardin, Pascal Sommer, Jacques Pouysségu, and Caroline Reynaud

Précis: Findings reveal a regulatory cycle that can act synergistically to favor cancer cell proliferation in hypoxic tumor microenvironments.
The Role of Calcium in the Activation of Estrogen Receptor-Alpha
Shailaja D. Divekar, Geoffrey B. Storchman, Katherine Sperle, David J. Veselik, Earl Johnson, Sivanesan Dakshanamurthy, Yuse N. Lajiminmuhip, Rebecca E. Nakles, Li Huang, and Mary Beth Martin
Précis: Results shed light on a potentially important mechanism involved in estrogen mimicry at the estrogen receptor-alpha, with implications for understanding breast cancer risk and the development of novel therapeutics for treatment of endocrine independent breast cancer.

Ulcerative Colitis–Associated Colorectal Cancer Arises in a Field of Short Telomeres, Senescence, and Inflammation
Rosa Ana Risques, Lisa A. Lai, Cigdem Himmetoglu, Anoosheh Ebaee, Lin Li, Ziding Feng, Mary P. Bronner, Bassel Al-Lahham, Kris V. Kowdley, Keith D. Lindor, Peter S. Rabinovitch, and Teresa A. Brentnall
Précis: In patients with ulcerative colitis, cell senescence acts as a tumor suppressor mechanism that is abrogated during the transition from low-grade to high-grade dysplasia.

MicroRNAs miR-199a-5p and -3p Target the Brm Subunit of SWI/SNF to Generate a Double-Negative Feedback Loop in a Variety of Human Cancers
Kouhei Sakurai, Chihiro Furukawa, Takeshi Haraguchi, Ken-ichi Inada, Kazuya Shiogama, Takanobu Tagawa, Shuji Fujita, Yoshihito Ueno, Aya Ogata, Mai Ito, Yutaka Tsutsumi, and Hideo Iba
Précis: Findings describe an microRNA-based mechanism constituting a double feedback loop for control of a pivotal chromatin remodeling factor in cancer cells.

Cyclin D1 Inhibits Mitochondrial Activity in B Cells
Guergana Tchakarska, Mikel Roussel, Xavier Troussard, and Brigitte Sola
Précis: Results identify a new function of cyclin D1 that could help explain its important pathophysiological roles in lymphomas and solid tumors.

Select Heterozygous Keap1 Mutations Have a Dominant-Negative Effect on Wild-Type Keap1 In Vivo
Takafumi Suzuki, Jonathan Maher, and Masayuki Yamamoto
Précis: A single-hit mutation in Keap1, a key regulator of the important cytoprotective gene Nrf2, is sufficient to generate a selective advantage in the cancer microenvironment.

Cancer Causes Cardiac Atrophy and Autophagy in a Sexually Dimorphic Manner
Pippa F. Cosper and Leslie A. Leinwand
Précis: Findings reveal the mechanisms of cancer-induced cardiac atrophy, which are distinct from skeletal muscle and exhibit sex differences.

Rho Kinase Phosphorylation Promotes Erk1/2-Mediated Metastasis in Hepatocellular Carcinoma
Yong Chen, Dongmei Wang, Zhen Guo, Jun Zhao, Bing Wu, Hui Deng, Ti Zhou, Hongjun Xiang, Fei Gao, Xue Yu, Jian Liao, Tarsha Ward, Peng Xia, Chibuzo Emenari, Xia Ding, Winston Thompson, Kelong Ma, Jingle Zhu, Felix Alkhiombare, Kefen Dou, Shi-Yuan Cheng, and Xuebiao Yao
Précis: This study reveals an important mechanistic linkage in metastasis of liver cancers, with potential therapeutic implications.

An EGFR–Src–Arg–Cortactin Pathway Mediates Functional Maturation of Invadopodia and Breast Cancer Cell Invasion
Christopher C. Mader, Matthew Oser, Marco A. O. Magalhaes, Jose Javier Bravo-Cordero, John Condeelis, Anthony J. Koleske, and Hava Gil-Henn
Précis: Findings define an Abl-related tyrosine kinase in a mechanism of breast cancer invasion that is mediated by invadopodia maturation and function.

Steroid Receptor Coactivator-1 Upregulates Integrin α5 Expression to Promote Breast Cancer Cell Adhesion and Migration
Li Qin, Xian Chen, Yelin Wu, Zhen Feng, Tao He, Li Wang, Lan Liao, and Jianming Xu
Précis: Findings suggest a mechanism through which a transcriptional coactivator can promote invasive progression in breast cancers, where it has been implicated as a marker of poor prognosis.

Epigenetic Silencing Mediated through Activated PI3K/AKT Signaling in Breast Cancer
Tao Zuo, Ta-Ming Liu, Xun Lan, Yu-I Weng, Rulong Shen, Fei Gu, Yi-Wen Huang, Sandya Liyanarachchi, Daniel E. Deatherage, Pei-Yin Hsu, Cenny Taslim, Bhuvaneswari Ramaswamy, Charles L. Shapiro, Huey-Jen L. Lin, Alfred S. L. Cheng, Victor X. Jin, and Tim H.-M. Huang
Précis: Combination therapy targeting PI3K/AKT signaling and DNA methylation can effectively reactivate epigenetically silenced genes and slow tumor progression.
Long-term Use of Cholesterol-Lowering Drugs and Cancer Incidence in a Large United States Cohort
Eric J. Jacobs, Christina C. Newton, Michael J. Thun, and Susan M. Gapstur

Précis: In this large prospective study, long-term use of cholesterol-lowering drugs was associated with lower risk of melanoma, endometrial cancer, and non-Hodgkin lymphoma.

Using a Stem Cell–Based Signature to Guide Therapeutic Selection in Cancer
Igor Shats, Michael L. Gatza, Jeffrey T. Chang, Seiichi Mori, Jialiang Wang, Jeremy Rich, and Joseph R. Nevins

Précis: Findings suggest strategies for therapeutic targeting of a stem-like phenotype in a relevant cohort of cancer patients.

Deoxycytidine Kinase Modulates the Impact of the ABC Transporter ABCG2 on Clofarabine Cytotoxicity
Shinjiro Nagai, Kazumasa Takenaka, Deepa Nachagari, Charles Rose, Kali Domoney, Dasi Sun, Alex Sparreboom, and John D. Schuetz

Précis: Findings show how an cellular efflux transporter can circumvent a major pathway to activate therapeutic nucleoside mimetic drugs.

Activation of TYRO3/AXL Tyrosine Kinase Receptors in Thyroid Cancer
Elvira Avilla, Valentina Guarino, Carla Visciano, Federica Liotti, Maria Svelto, GnanaPrakasam Krishnamoorthy, Renato Franco, and Rosa Marina Melillo

Précis: Findings prompt clinical study of a tractable therapy for thyroid cancer based on disruption of a functionally critical cell surface receptor signaling complex.

Use of Macrophages to Target Therapeutic Adenovirus to Human Prostate Tumors

Précis: Findings describe the use of macrophages to target an oncolytic adenovirus to hypoxic areas of prostate tumors, to improve viral inhibition of primary and secondary tumor growth.

Discovery of DNA Repair Inhibitors by Combinatorial Library Profiling
Benjamin J. Moeller, Richard L. Sidman, Renata Pasqualini, and Wadih Arap

Précis: Combinatorial profiling of double-strand DNA break repair machinery yields peptides capable of modulating DNA repair phenotypes and sensitizing tumor cells to genotoxic therapy.

CNT1 Expression Influences Proliferation and Chemosensitivity in Drug-Resistant Pancreatic Cancer Cells
Yangzom D. Bhutia, Sau Wai Hung, Bhavi Patel, Dylan Lovin and Rajgopal Govindarajan

Précis: Findings suggest an effective strategy to defeat chemoresistance in human pancreatic cancers, which remains a primary clinical challenge.

Parallel High-Throughput RNA Interference Screens Identify PINK1 as a Potential Therapeutic Target for the Treatment of DNA Mismatch Repair–Deficient Cancers
Sarah A. Martin, Madeleine Hewish, David Sims, Christopher J. Lord, and Alan Ashworth

Précis: A kinase originally linked to Parkinson's disease may offer a potential therapeutic target in treatment of cancers characterized by a specific deficiency in DNA repair.

Therapeutic Inhibition of MAP Kinase Interacting Kinase Blocks Eukaryotic Initiation Factor 4E Phosphorylation and Suppresses Outgrowth of Experimental Lung Metastases

Précis: Findings offer initial preclinical proof-of-concept for small molecule blockade of a important translational regulator as a tractable cancer therapeutic approach.

Chromosomal Instability Confers Intrinsic Multidrug Resistance
Alvin J.X. Lee, David Endesfelder, Andrew J. Rowan, Axel Wallther, Nicolai J. Birkbak, P. Andrew Futreal, Julian Downward, Zoltan Szallasi, Ian P.M. Tomlinson, Michael Howell, Maik Kschischo, and Charles Swanton

Précis: Determining the chromosome instability status of patient tumors may provide useful information on the clinical response to many cytotoxic agents and small molecules.
Trastuzumab Has Preferential Activity against Breast Cancers Driven by HER2 Homodimers
Ritwik Ghosh, Archana Narasanna, Shizhen Emily Wang, Shuying Liu, Anindita Chakrabarty, Justin M. Balko, Ana Maria Gonzalez-Angulo, Gordon B. Mills, Elicia Penuel, John Winslow, Jeff Sperinde, Rajiv Dua, Sajilaja Pidaparthi, Ali Mukherjee, Kim Leitzel, Wolfgang J. Kostler, Allan Lipton, Michael Bates, and Carlos L. Arteaga

Précis: Findings suggest that the dimeric state of an oncogenic receptor in cancer cells may impact their therapeutic response to antireceptor antibodies.

Distinct TRAIL Resistance Mechanisms Can Be Overcome by Proteasome Inhibition but not Generally by Synergizing Agents
Christina Menke, Lianghua Bin, Jacqueline Thorburn, Kian Behbakht, Heide L. Ford, and Andrew Thorburn

Précis: This study rationalizes anticancer combinations that not only synergize but also overcome drug resistance, a primary challenge in cancer care.

Functional Activation of the Estrogen Receptor-α and Aromatase by the HDAC Inhibitor Entinostat Sensitizes ER-Negative Tumors to Letrozole
Gauri J. Sabnis, Olga Goloubeva, Saranya Chumsri, Nguyen Nguyen, Saraswati Sukumar, and Angela M.H. Brodie

Précis: This incisive and important preclinical study shows how using histone deacetylase inhibitors to restore ER expression in ER-negative tumors can be used to sensitize them to the therapeutic effects of aromatase inhibitors.

6-Thioguanine Reactivates Epigenetically Silenced Genes in Acute Lymphoblastic Leukemia Cells by Facilitating Proteasome-mediated Degradation of DNMT1
Bifeng Yuan, Jing Zhang, Hongxia Wang, Lei Xiong, Qian Cai, Tina Wang, Steven Jacobsen, Srijaruna Pradhan, and Yinsheng Wang

Précis: This study reveals a vital mechanistic connection between the widely employed cancer drug 6-thioguanine and its effects on DNA hypomethylation, with implications for understanding therapeutic efficacy.

The Epithelial-Mesenchymal Transition Mediator S100A4 Maintains Cancer-Initiating Cells in Head and Neck Cancers
Jeng-Fan Lo, Cheng-Chia Yu, Shih-Hwa Chiou, Chih-Yang Huang, Chia-Ing Jan, Shu-Chun Lin, Chung-Ji Liu, Wen-Yuan Hu, and Yau-Hua Yu

Précis: A calcium-binding molecule that is prognostic in several cancers is found to be critical to maintain stemness properties, with implications for new cancer targeting strategies.

Prediction and Genetic Demonstration of a Role for Activator E2Fs in Myc-Induced Tumors
Kenichiro Fujiwara, Inez Yuwanita, Daniel P. Hollern, and Eran R. Andrechek

Précis: This study establishes the root causal relationships between Myc and E2F, two key transcription factors involved in virtually all human cancers.

The ΔNp63 Proteins Are Key Allies of BRCA1 in the Prevention of Basal-Like Breast Cancer

Précis: Findings define an important transcriptional target of BRCA1 that may provide insight into the pathogenesis of basal-like breast cancers, an aggressive but poorly understood disease.

Ron Kinase Transphosphorylation Sustains MET Oncogene Addiction
Silvia Benvenuti, Luca Lazzari, Addolorata Arnesano, Giulia Li Chiavi, Alessandra Gentile, and Paolo M. Comoglio

Précis: Insights into how oncogenic addiction is maintained to the MET kinase, which drives a powerful program of invasive growth in cancer cells, suggest strategies to strengthen cancer therapies based on MET inhibition.
1956  Systematic Analysis of MicroRNAs Targeting the Androgen Receptor in Prostate Cancer Cells
Päivi Ostling, Suvi-Katri Leivonen, Anna Aakula, Pekka Kohonen, Rami Makelä, Zandra Hagman, Anders Edsjo, Sara Kangaspeska, Henrik Edgren, Daniel Nicorici, Anders Bjartell, Yvonne Ceder, Merja Perälä, and Olli Kallioniemi

Précis: A comprehensive survey defines a set of microRNAs that are important regulators of androgen receptor levels and prostate cancer cell proliferation.

1968  Identification of N-Terminally Truncated Stable Nuclear Isoforms of CDC25B That Are Specifically Involved in G2/M Checkpoint Recovery
Denis Jullien, Beatrice Bugler, Christine Dozier, Martine Cazales, and Bernard Ducommun

Précis: Findings prompt a rethinking of CDC25B regulation and function and how its impaired expression in cancer may affect susceptibility and chemotherapeutic response.

1978  Identification of a Clinically Relevant Androgen-Dependent Gene Signature in Prostate Cancer
Hannelore V. Heemers, Lucy J. Schmidt, Zhifu Sun, Kevin M. Regan, S. Keith Anderson, Kelly Duncan, Dan Wang, Song Liu, Karla V. Ballman, and Donald J. Tindall

Précis: Findings prompt new insights into how androgen signaling might be selectively blocked in prostate cancer cells while sparing normal androgen-dependent processes.

1989  LPS-Induced TLR4 Signaling in Human Colorectal Cancer Cells Increases β1 Integrin-Mediated Cell Adhesion and Liver Metastasis
Rich Y.C. Hsu, Carlos H.F. Chan, Jonathan D. Spicer, Mathieu C. Rousseau, Betty Giannias, Simon Rousseau, and Lorenzo E. Ferri

Précis: Infectious complications during colon cancer surgery may contribute to liver metastasis, suggesting benefits to inhibiting these complications during the perioperative period.

1999  High Basal Nuclear Levels of Nrf2 in Acute Myeloid Leukemia Reduces Sensitivity to Proteasome Inhibitors
Stuart A. Rushworth, Kristian M. Bowles, and David J. MacEwan

Précis: Findings suggest a strategy to render AML cells sensitive to proteasome inhibitory drugs, which are presently ineffective in this disease.

2010  Negative Regulation of the Hippo Pathway by E3 Ubiquitin Ligase ITCH Is Sufficient to Promote Tumorigenicity
Zaidoun Salah, Gerry Melino, and Rami I. Aqeilan

Précis: A key regulator of the Hippo tumor suppressor pathway functions as a potent oncogene.

ABOUT THE COVER

Photograph showing skinfold chambers with implanted mammary carcinoma in mice with normal (large image) and low (small image) platelet counts. Thrombocytopenia resulted in specific bleeding of the tumor. The lack of platelets induced breaches in the tumor vasculature that promoted extravasation of red blood cells and specifically increased the delivery of chemotherapeutic agents into the tumor. Thus, by favoring accumulation of the drug at the tumor site, low platelet count improved its effects and reduced tumor growth. For details, see the article by Demers and colleagues on page 1540 of this issue.
