**BREAKING ADVANCES**

1509  |  Highlights from Recent Cancer Literature

**REVIEWS**

1511  |  Ironing Out Cancer
Suzy V. Torti and Frank M. Torti

1515  |  p95HER2 and Breast Cancer
Joaquín Arribas, José Baselga, Kim Pedersen, and Josep Lluís Parra-Palau

**PRIORITY REPORTS**

1520  |  Anti-DLL4 Inhibits Growth and Reduces Tumor-Initiating Cell Frequency in Colorectal Tumors with Oncogenic KRAS Mutations
Marcus Fischer, Wan-Ching Yen, Ann M. Kapoun, Min Wang, Gilbert O'Young, John Lewicki, Austin Gurney, and Timothy Hoey

Précis: Findings provide a preclinical rationale for clinical targeting of a Notch receptor ligand to improve treatment of colon cancers with oncogenic KRAS mutations, which are refractory to existing treatments.

1526  |  Detection of Circulating Tumor Cells in Human Peripheral Blood Using Surface-Enhanced Raman Scattering Nanoparticles
Xu Wang, Ximei Qian, Jonathan J. Beittler, Zhuo Georgia Chen, Fadlo R. Khuri, Melinda M. Lewis, Hyung J. Shin, Shuming Nie, and Dong M. Shin

Précis: This study reports a rapid, simple, and inexpensive assay to detect cancer cells in blood, offering a potentially important tool for clinical management of cancer and cancer relapse.

**MICROENVIRONMENT AND IMMUNOLOGY**

1533  |  A Germline Variant in the Interferon Regulatory Factor 4 Gene as a Novel Skin Cancer Risk Locus
Jiali Han, Abrar A. Qureshi, Hongmei Nan, Jiangwen Zhang, Yiqing Song, Qun Guo, and David J. Hunter

Précis: A single nucleotide polymorphism identified in a key immune regulatory transcription factor associates with elevated risk of the most common types of skin cancer.

1540  |  Increased Efficacy of Breast Cancer Chemotherapy in Thrombocytopenic Mice
Mélanie Demers, Benoît Ho-Tin-Noé, Daphne Schatzberg, Janie J. Yang, and Denisa D. Wagner

Précis: Depleting platelets in tumor-bearing mice preferentially increases the leakiness of the tumor vasculature, leveraging the efficacy of administered chemotherapies without worsening toxic side effects.

1550  |  Gap Junction–Mediated Import of MicroRNA from Bone Marrow Stromal Cells Can Elicit Cell Cycle Quiescence in Breast Cancer Cells
Philip K. Lim, Sarah A. Bliss, Shyam A. Patel, Marcelo Taborga, Meneka A. Dave, Larissa A. Gregory, Steven J. Greco, Margarette Bryan, Prem S. Patel, and Pranela Rameshwar

Précis: Cellular exchange of microRNAs is emerging as a fascinating new mechanism by which tumor stromal cells can influence the tumor cell pathophysiology.

1561  |  LOXL2-Mediated Matrix Remodeling in Metastasis and Mammary Gland Involution
Holly E. Barker, Joan Chang, Thomas R. Cox, Georgina Lang, Demelza Bird, Monica Nicolau, Holly R. Evans, Alison Gartland, and Janine T. Erler

Précis: Findings offer preclinical evidence that breast cancer metastasis can be blocked by targeting an important oxidase in the tumor microenvironment.

**Précis:** Findings reveal a novel mechanism by which STAT3 modulates immunosurveillance by NK immune cells, by repressing the expression of a key NK cell recognition molecule on cancer cells.
The Role of Calcium in the Activation of Estrogen Receptor-Alpha
Shailaja D. Divekar, Geoffrey B. Storch, Katherine Sperle, David J. Veselik, Earl Johnson, Sivanesan Dakshanamurthy, Yuse N. Lajiminmuhip, Rebecca E. Nakles, Li Huang, and Mary Beth Martin

Precis: Results shed light on a potentially important mechanism involved in estrogen mimicry at the estrogen receptor-alpha, with implications for understanding breast cancer risk and the development of novel therapeutics for treatment of endocrine independent breast cancer.

Ulcerative Colitis–Associated Colorectal Cancer Arises in a Field of Short Telomeres, Senescence, and Inflammation
Rosa Ana Risques, Lisa A. Lai, Cigdem Himmetoglu, Anoosheh Ebaee, Lin Li, Ziding Feng, Mary P. Bronner, Bassel Al-Lahham, Kris V. Kowdley, Keith D. Lindor, Peter S. Rabinovitch, and Teresa A. Brentnall

Precis: In patients with ulcerative colitis, cell senescence acts as a tumor suppressor mechanism that is abrogated during the transition from low-grade to high-grade dysplasia.

MicroRNAs miR-199a-5p and -3p Target the Brg Subunit of SWI/SNF to Generate a Double-Negative Feedback Loop in a Variety of Human Cancers
Kouhei Sakurai, Chihiro Furukawa, Takeshi Haraguchi, Ken-ichi Inada, Kazuya Shiogama, Takanobu Tagawa, Shuji Fujita, Yoshihito Ueno, Aya Ogata, Mai Ito, Yutaka Tsutsumi, and Hideo Iba

Precis: Findings describe an microRNA-based mechanism constituting a double feedback loop for control of a pivotal chromatin remodeling factor in cancer cells.

Cyclin D1 Inhibits Mitochondrial Activity in B Cells
Guergana Tchakarska, Mikel Roussel, Xavier Troussard, and Brigitte Sola

Precis: Results identify a new function of cyclin D1 that could help explain its important pathophysiological roles in lymphomas and solid tumors.

Select Heterozygous Keap1 Mutations Have a Dominant-Negative Effect on Wild-Type Keap1 In Vivo
Takafumi Suzuki, Jonathan Maher, and Masayuki Yamamoto

Precis: A single-hit mutation in Keap1, a key regulator of the important cytoprotective gene Nrf2, is sufficient to generate a selective advantage in the cancer microenvironment.

Cancer Causes Cardiac Atrophy and Autophagy in a Sexually Dimorphic Manner
Pippa F. Cosper and Leslie A. Leinwand

Precis: Findings reveal the mechanisms of cancer-induced cardiac atrophy, which are distinct from skeletal muscle and exhibit sex differences.

Rho Kinase Phosphorylation Promotes Erk1-Mediated Metastasis in Hepatocellular Carcinoma
Yong Chen, Dongmei Wang, Zhen Guo, Jun Zhao, Bing Wu, Hui Deng, Ti Zhou, Hongjun Xiang, Fei Gao, Xue Yu, Jian Liao, Tarsha Ward, Peng Xia, Chibuzo Ememari, Xia Ding, Winston Thompson, Kelong Ma, Jingde Zhu, Felix Alkhionbare, Kefen Dou, Shi-Yuan Cheng, and Xuebiao Yao

Precis: This study reveals an important mechanistic linkage in metastasis of liver cancers, with potential therapeutic implications.

An EGFR–Src–Arg–Cortactin Pathway Mediates Functional Maturation of Invadopodia and Breast Cancer Cell Invasion
Christopher C. Mader, Matthew Oser, Marco A. O. Magalhaes, Jose Javier Bravo-Cordero, John Condeelis, Anthony J. Koleske, and Hava Gil-Henn

Precis: Findings define an Abl-related tyrosine kinase in a mechanism of breast cancer invasion that is mediated by invadopodia maturation and function.

Steroid Receptor Coactivator-1 Upregulates Integrin α5 Expression to Promote Breast Cancer Cell Adhesion and Migration
Li Qin, Xian Chen, Yelin Wu, Zhen Feng, Tao He, Li Wang, Lan Liao, and Jianming Xu

Precis: Findings suggest a mechanism through which a transcriptional coactivator can promote invasive progression in breast cancers, where it has been implicated as a marker of poor prognosis.

Epigenetic Silencing Mediated through Activated PI3K/AKT Signaling in Breast Cancer
Tao Zuo, Ta-Ming Liu, Xun Lan, Yu-I Weng, Rulong Shen, Fei Gu, Yi-Wen Huang, Sandy Liyanarachchi, Daniel E. Deatherage, Pei-Yin Hsu, Cenny Taslim, Bhuvaneswari Ramaswamy, Charles L. Shapiro, Huey-Jen L. Lin, Alfred S. L. Cheng, Victor X. Jin, and Tim H.-M. Huang

Precis: Combination therapy targeting PI3K/AKT signaling and DNA methylation can effectively reactivate epigenetically silenced genes and slow tumor progression.
PREVENTION AND EPIDEMIOLOGY

1763
Long-term Use of Cholesterol-Lowering Drugs and Cancer Incidence in a Large United States Cohort
Eric J. Jacobs, Christina C. Newton, Michael J. Thun, and Susan M. Gapstur
Précis: In this large prospective study, long-term use of cholesterol-lowering drugs was associated with lower risk of melanoma, endometrial cancer, and non-Hodgkin lymphoma.

THERAPEUTICS, TARGETS, AND CHEMICAL BIOLOGY

1772
Using a Stem Cell–Based Signature to Guide Therapeutic Selection in Cancer
Igor Shats, Michael L. Gatza, Jeffrey T. Chang, Seiichi Morii, Jialiang Wang, Jeremy Rich, and Joseph R. Nevins
Précis: Findings suggest strategies for therapeutic targeting of a stem-like phenotype in a relevant cohort of cancer patients.

1781
Deoxycytidine Kinase Modulates the Impact of the ABC Transporter ABCG2 on Clofarabine Cytotoxicity
Shinjirou Nagai, Kazumasa Takenaka, Deepa Nachagari, Charles Rose, Kali Domoney, Dazi Sun, Alex Sparreboom, and John D. Schuetz
Précis: Findings show how an cellular efflux transporter can circumvent a major pathway to activate therapeutic nucleoside mimetic drugs.

1792
Activation of TYRO3/AXL Tyrosine Kinase Receptors in Thyroid Cancer
Elvira Avilla, Valentina Guarino, Carla Visciano, Federica Liotti, Maria Svello, GnanaPrakasam Krishnamoorthy, Renato Franco, and Rosa Marina Melillo
Précis: Findings prompt clinical study of a tractable therapy for thyroid cancer based on disruption of a functionally critical cell surface receptor signaling complex.

1805
Use of Macrophages to Target Therapeutic Adenovirus to Human Prostate Tumors
Précis: Findings describe the use of macrophages to target an oncolytic adenovirus to hypoxic areas of prostate tumors, to improve viral inhibition of primary and secondary tumor growth.

1816
Discovery of DNA Repair Inhibitors by Combinatorial Library Profiling
Benjamin J. Moeller, Richard L. Sidman, Renata Pasqualini, and Wadih Arap
Précis: Combinatorial profiling of double-strand DNA break repair machinery yields peptides capable of modulating DNA repair phenotypes and sensitizing tumor cells to genotoxic therapy.

1825
CNT1 Expression Influences Proliferation and Chemosensitivity in Drug-Resistant Pancreatic Cancer Cells
Yangzom D. Bhutia, Sau Wai Hung, Bhavi Patel, Dylan Lovin and Raigopal Govindarajan
Précis: Findings suggest an effective strategy to defeat chemoresistance in human pancreatic cancers, which remains a primary clinical challenge.

1836
Parallel High-Throughput RNA Interference Screens Identify PINK1 as a Potential Therapeutic Target for the Treatment of DNA Mismatch Repair–Deficient Cancers
Sarah A. Martin, Madeleine Hewish, David Sims, Christopher J. Lord, and Alan Ashworth
Précis: A kinase originally linked to Parkinson’s disease may offer a potential therapeutic target in treatment of cancers characterized by a specific deficiency in DNA repair.

1849
Therapeutic Inhibition of MAP Kinase Interacting Kinase Blocks Eukaryotic Initiation Factor 4E Phosphorylation and Suppresses Outgrowth of Experimental Lung Metastases
Précis: Findings offer initial preclinical proof-of-concept for small molecule blockade of a important translational regulator as a tractable cancer therapeutic approach.

1858
Chromosomal Instability Confers Intrinsic Multidrug Resistance
Alvin J.X. Lee, David Endesfelder, Andrew J. Rowan, Axel Wallther, Nicolai J. Birkbak, P. Andrew Futreal, Julian Downward, Zoltan Szallasi, Ian P.M. Tomlinson, Michael Howell, Maik Kschischo, and Charles Swanton
Précis: Determining the chromosome instability status of patient tumors may provide useful information on the clinical response to many cytotoxic agents and small molecules.
Trastuzumab Has Preferential Activity against Breast Cancers Driven by HER2 Homodimers

 précis: Findings suggest that the dimeric state of an oncogenic receptor in cancer cells may impact their therapeutic response to antireceptor antibodies.

Distinct TRAIL Resistance Mechanisms Can Be Overcome by Proteasome Inhibition but not Generally by Synergizing Agents
Christina Menke, Lianghua Bin, Jacqueline Thorburn, Kian Behbakht, Heide L. Ford, and Andrew Thorburn

 précis: This study rationalizes anticancer combinations that not only synergize but also overcome drug resistance, a primary challenge in cancer care.

Functional Activation of the Estrogen Receptor-α and Aromatase by the HDAC Inhibitor Entinostat Sensitizes ER-Negative Tumors to Letrozole
Gauri J. Sabnis, Olga Goloubeva, Saranya Chumsri, Nguyen Nguyen, Saraswati Sukumar, and Angela M.H. Brodie

 précis: This incisive and important preclinical study shows how using histone deacetylase inhibitors to restore ER expression in ER-negative tumors can be used to sensitize them to the therapeutic effects of aromatase inhibitors.

6-Thioguanine Reactivates Epigenetically Silenced Genes in Acute Lymphoblastic Leukemia Cells by Facilitating Proteasome-mediated Degradation of DNMT1
Bifeng Yuan, Jing Zhang, Hongxia Wang, Lei Xiong, Qian Cai, Tina Wang, Steven Jacobsen, Srijarsa Pradhan, and Yinsheng Wang

 précis: This study reveals a vital mechanistic connection between the widely employed cancer drug 6-thioguanine and its effects on DNA hypomethylation, with implications for understanding therapeutic efficacy.

The Epithelial-Mesenchymal Transition Mediator S100A4 Maintains Cancer-Initiating Cells in Head and Neck Cancers
Jeng-Fan Lo, Cheng-Chia Yu, Shih-Hwa Chiuo, Chih-Yang Huang, Chia-Ing Jan, Shu-Chun Lin, Chung-Ji Liu, Wen-Yuan Hu, and Yau-Hua Yu

 précis: A calcium-binding molecule that is prognostic in several cancers is found to be critical to maintain stemness properties, with implications for new cancer targeting strategies.

Prediction and Genetic Demonstration of a Role for Activator E2Fs in Myc-Induced Tumors
Kenichiro Fujimura, Inez Yuwanita, Daniel P. Hollern, and Eran R. Andrechek

 précis: This study establishes the root causal relationships between Myc and E2F, two key transcription factors involved in virtually all human cancers.

The &Delta;n63 Proteins Are Key Allies of BRCA1 in the Prevention of Basal-Like Breast Cancer

 précis: Findings define an important transcriptional target of BRCA1 that may provide insight into the pathogenesis of basal-like breast cancers, an aggressive but poorly understood disease.

Ron Kinase Transphosphorylation Sustains MET Oncogene Addiction
Silvia Benvenuti, Luca Lazzari, Addolorata Arnesano, Giulia Li Chiavi, Alessandra Gentile, and Paolo M. Comoglio

 précis: Insights into how oncogenic addiction is maintained to the MET kinase, which drives a powerful program of invasive growth in cancer cells, suggest strategies to strengthen cancer therapies based on MET inhibition.
Systematic Analysis of MicroRNAs Targeting the Androgen Receptor in Prostate Cancer Cells
Päivi Otsling, Suvi-Katri Leivonen, Anna Aakula, Pekka Kohonen, Rami Makelä, Zandra Hagman, Anders Edsjö, Sara Kangaspeska, Henrik Edgren, Daniel Nicorici, Anders Bjartell, Yvonne Ceder, Merja Perälä, and Olli Kallioniemi

Précis: A comprehensive survey defines a set of microRNAs that are important regulators of androgen receptor levels and prostate cancer cell proliferation.

Identification of N-Terminally Truncated Stable Nuclear Isoforms of CDC25B That Are Specifically Involved in G2/M Checkpoint Recovery
Denis Jullien, Beatrix Bugler, Christine Dozier, Martine Cazales, and Bernard Ducommun

Précis: Findings prompt a rethinking of CDC25B regulation and function and how its impaired expression in cancer may affect susceptibility and chemotherapeutic response.

Identification of a Clinically Relevant Androgen-Dependent Gene Signature in Prostate Cancer
Hannelore V. Heemers, Lucy J. Schmidt, Zhifu Sun, Kevin M. Regan, S. Keith Anderson, Kelly Duncan, Dan Wang, Song Liu, Karla V. Ballman, and Donald J. Tindall

Précis: Findings prompt new insights into how androgen signaling might be selectively blocked in prostate cancer cells while sparing normal androgen-dependent processes.

LPS-Induced TLR4 Signaling in Human Colorectal Cancer Cells Increases β1 Integrin-Mediated Cell Adhesion and Liver Metastasis
Rich Y.C. Hsu, Carles H.F. Chan, Jonathan D. Spicer, Mathieu C. Rousseau, Betty Giannias, Simon Rousseau, and Lorenzo E. Ferri

Précis: Infectious complications during colon cancer surgery may contribute to liver metastasis, suggesting benefits to inhibiting these complications during the perioperative period.

High Basal Nuclear Levels of Nrf2 in Acute Myeloid Leukemia Reduces Sensitivity to Proteasome Inhibitors
Stuart A. Bushworth, Kristian M. Bowles, and David J. MacEwan

Précis: Findings suggest a strategy to render AML cells sensitive to proteasome inhibitory drugs, which are presently ineffective in this disease.

Negative Regulation of the Hippo Pathway by E3 Ubiquitin Ligase ITCH Is Sufficient to Promote Tumorigenicity
Zaidoun Salah, Gerry Melino, and Rami I. Aqeilan

Précis: A key regulator of the Hippo tumor suppressor pathway functions as a potent oncogene.

CORRECTIONS

ABOUT THE COVER

Photograph showing skinfold chambers with implanted mammary carcinoma in mice with normal (large image) and low (small image) platelet counts. Thrombocytopenia resulted in specific bleeding of the tumor. The lack of platelets induced breaches in the tumor vasculature that promoted extravasation of red blood cells and specifically increased the delivery of chemotherapeutic agents into the tumor. Thus, by favoring accumulation of the drug at the tumor site, low platelet count improved its effects and reduced tumor growth. For details, see the article by Demers and colleagues on page 1540 of this issue.
