BREAKING ADVANCES

Highlights from Recent Cancer Literature

FROM THE EDITOR’S CHAIR

Perspectives on Emerging Trends in Cancer Research
George C. Prendergast

REVIEWS

Calcineurin Signaling as a Negative Determinant of Keratinocyte Cancer Stem Cell Potential and Carcinogenesis
G. Paolo Dotto

MYC and Metastasis
Anita Wolfer and Sridhar Ramaswamy

PRIORITY REPORT

Spontaneous Cytotoxic T-Cell Reactivity against Indoleamine 2,3-Dioxygenase-2
Rikke Bæk Sørensen, Tania Køllgaard, Rikke Sick Andersen, Joost Huibert van den Berg, Inge Marie Svane, Per thor Straten, and Mads Hald Andersen
"Précis: IDO2-specific T cells are present among peripheral blood lymphocytes in cancer patients and are able to recognize and kill cancer cells.

INTEGRATED SYSTEMS AND TECHNOLOGIES

Genome-Wide Analysis of Alternative Splicing in Medulloblastoma Identifies Splicing Patterns Characteristic of Normal Cerebellar Development
Francesca Menghi, Thomas S. Jacques, Martino Barenco, Ed C. Schwalbe, Steven C. Clifford, Mike Hubank, and Jonathan Ham
"Précis: Increasing evidence points to a critical role for dysregulated patterns of alternate splicing in driving tumorigenesis, here illustrated by implications of a failure of differentiation pathways in a little understood but deadly childhood tumor.

MICROENVIRONMENT AND IMMUNOLOGY

CCL11–CCR3 Interactions Promote Survival of Anaplastic Large Cell Lymphoma Cells via ERK1/2 Activation
Tomomitsu Miyagaki, Makoto Sugaya, Takashi Murakami, Yoshide Asano, Yayoi Tada, Takafumi Kadono, Hitoshi Okochi, Kunihiko Tamaki, and Shinichi Sato
"Précis: Findings prompt a novel therapeutic approach to treat relapses of an aggressive form of lymphoma based on the discovery that a cell surface marker of disease junctions as a critical autocrine growth receptor.

Cancer Immunotherapy Using a Bispecific NK Receptor Fusion Protein that Engages both T Cells and Tumor Cells
Tong Zhang and Charles L. Sentman
"Précis: This study offers preclinical proof-of-concept for an interesting new biologic agent that stimulates effective host antitumor immunity, in support of clinical evaluation.

Anti-IL-23 Monoclonal Antibody Synergizes in Combination with Targeted Therapies or IL-2 to Suppress Tumor Growth and Metastases
Michele W.L. Teng, Bianca von Scheidt, Helene Duret, Jennifer E. Towne, and Mark J. Smyth
"Précis: This study offers the first description of therapeutic activity for anti-IL-23 antibody in preclinical mouse models of cancer.

MOLECULAR AND CELLULAR PATHOBIOLOGY

Protein Kinase C ō Is a Downstream Effector of Oncogenic K-ras in Lung Tumors
Jennifer M. Symonds, Angela M. Ohm, Cristan J. Carter, Lynn E. Heasley, Theresa A. Boyle, Wilbur A. Franklin, and Mary E. Reyalnd
"Précis: A protein kinase C isoform implicated in apoptosis has a differential effect on cancer cell growth depending on the involvement of oncogenic KRAS in proliferation and survival, with potential implications on how to improve therapeutic targeting of mutant KRAS-driven tumors.

Shmt1 Heterozygosity Impairs Folate-Dependent Thymidylate Synthesis Capacity and Modifies Risk of Apo-Mediated Intestinal Cancer Risk
Amanda J. MacFarlane, Cheryll A. Perry, Michael F. McEntee, David M. Lin, and Patrick J. Stover

Précis: Folate-dependent thymidylate synthesis capacity modifies susceptibility to intestinal cancer, independent of cellular methylation potential.

Intragenic Rearrangement and Altered RNA Splicing of the Androgen Receptor in a Cell-Based Model of Prostate Cancer Progression
Yingming Li, Majid Alsagabi, Danhua Fan, G. Steven Bova, Ahmed H. Tewfik, and Scott M. Dehm

Précis: This study describes a novel genomic aberration in prostate cancer cells that is associated with aberrant RNA splicing of the androgen receptor, leading to synthesis of truncated receptors that drive resistance to androgen depletion therapy.

CARM1 Is an Important Determinant of ERα-Dependent Breast Cancer Cell Differentiation and Proliferation in Breast Cancer Cells
Mariam Al-Dhaheri, Jiacai Wu, Georgios P. Skliris, Jun Li, Ken Higashimato, Yidan Wang, Kevin P. White, Paul Lambert, Yuerong Zhu, Leigh Murphy, and Wei Xu

Précis: Results define a histone arginine methyltransferase as a candidate theranostic target in ER-positive breast cancers, with implications to improve the diagnosis of well-differentiated tumors and potentially to improve the chance for cures.

Cep63 Recruits Cdk1 to the Centrosome: Implications for Regulation of Mitotic Entry, Centrosome Amplification, and Genome Maintenance
Harald Löffler, Anne Fechter, Marc Matuszewsk, Rainer Saffrich, Martin Mistrik, Joachim Marhold, Christin Hornung, Frank Westermann, Jiri Bartek, and Alwin Krämer

Précis: The discovery how Cdk1 kinase is recruited to centrosomes advances understanding of how mitosis is controlled and why centrosome amplification and chromosomal breakage occur so commonly in cancer cells.

Oncogenic Synergism between ErbB1, Nucleolin, and Mutant Ras

Précis: This study describes a fascinating protein complex that might be targeted as a general approach to attack the many human cancers driven by EGF family receptors and Ras small GTPases.

HSulf-1 Modulates FGF2- and Hypoxia-Mediated Migration and Invasion of Breast Cancer Cells
Ashwani Khurana, Peng Liu, Pasquale Mellone, Laura Lorenzon, Bruno Vincenzi, Kaustubh Datta, Bo Yang, Robert J. Linhardt, Wilma Lingle, Jeremy Chien, Alfonso Baldi, and Viji Shridhar

Précis: This study describes regulation of heparan sulfatase-1 by hypoxia leading to increased cell migration and invasion in breast cancer cells.

Identification of a Tumor Suppressor Relay between the FOXP3 and the Hippo Pathways in Breast and Prostate Cancers
Weiquan Li, Lizhong Wang, Hiroto Katoh, Runhua Liu, Pan Zheng, and Yang Liu

Précis: Findings define a functional connection between two important tumor suppressor pathways in cancer, with potential theranostic implications.

IMP-1 Displays Cross-Talk with K-Ras and Modulates Colon Cancer Cell Survival through the Novel Proapoptotic Protein CYFIP2
Perry S. Mongroo, Felicite K. Noubissi, Miriam Cuatrecasas, Jiri Kalabis, Catrina E. King, Cameron N. Johnstone, Mark J. Bowser, Antoni Castells, Vladimir S. Spiegelman, and Anil K. Rustgi

Précis: Findings indicate that the Myc-interacting protein IMP-1 acts upstream of K-Ras to promote survival through a novel mechanism that may be important in colon cancer pathogenesis.

CARMA3 is Crucial for EGFR-Induced Activation of NF-κB and Tumor Progression
Tang Jiang, Brian Grabiner, Yifan Zhu, Changying Jiang, Hongxiu Li, Yun You, Jingyu Lang, Mien-Chie Hung, and Xin Lin

Précis: Results elucidate how EGFR signaling leads to NF-κB activation and its role in tumor progression.
**PrLZ Protects Prostate Cancer Cells from Apoptosis Induced by Androgen Deprivation via the Activation of Stat3/Bcl-2 Pathway**

Précis: A novel antiapoptotic gene that is specifically activated in prostate cancer cells escaping androgen deprivation may offer an appealing therapeutic target to prevent or treat advanced prostate malignancy.

**The Adaptor Protein AMOT Promotes the Proliferation of Mammary Epithelial Cells via the Prolonged Activation of the Extracellular Signal-Regulated Kinases**

William P. Ranahan, Zhang Han, Whitney Smith-Kinnaman, Sarah C. Nabinger, Brigitte Heller, Britney-Shea Herbert, Rebecca Chan, and Clark D. Wells

Précis: This study identifies a novel mechanism whereby the adapter protein Amot mediates ERK1/2 dependent proliferation of breast cancer cells.

**Interaction between MYC and MCL1 in the Genesis and Outcome of Non–Small-Cell Lung Cancer**

Thaddeus D. Allen, Chang Qi Zhu, Kirk D. Jones, Naoki Yanagawa, Ming-Sound Tsao, and J. Michael Bishop

Précis: Findings offer an excellent illustration of how studies in clinically relevant mouse models can lead to a re-examination of clinical findings, here linking two important oncogenes as prognostic biomarkers in the most common type of human lung cancer.

**Contribution of Inherited Mutations in the BRCA2-Interacting Protein PALB2 to Familial Breast Cancer**

Silvia Casadei, Barbara M. Norquist, Tom Walsh, Sunday Stray, Jessica B. Mandell, Ming-K. Lee, John A. Stamatoyannopoulos, and Mary-Claire King

Précis: This study characterizes the mutational spectrum of the tumor suppressor gene PALB2, which is mutated in a fraction of familial breast cancer patients and is particularly strongly associated with male breast cancer and pancreatic cancer.

**Targeted Signal-Amplifying Enzymes Enhance MRI of EGFR Expression in an Orthotopic Model of Human Glioma**

Mohammed S. Shazeef, Christopher H. Sotak, Michael DeLeo III, and Alexei Bogdanov Jr.

Précis: Findings define a signal amplification and contrast agent retention strategy for in vivo imaging of gliomas expressing EGFRvIII variants that are best suited to treatment with therapeutic EGFR antibodies.

**Heavy Chain Ferritin siRNA Delivered by Cationic Liposomes Increases Sensitivity of Cancer Cells to Chemotherapeutic Agents**

Xiaoli Liu, A.B. Madhankumar, Becky Slagle-Webb, Jonas M. Sheehan, Nodar Surguladze, and James R. Connor

Précis: Findings provide preclinical demonstration of a siRNA-based targeting and delivery approach that can be used to sensitize brain tumor cells to chemotherapy.

**Influence of Affinity and Antigen Internalization on the Uptake and Penetration of Anti-HER2 Antibodies in Solid Tumors**

Précis: Determining the factors that influence how effectively a therapeutic antibody can penetrate tumors is important for optimizing efficacious effects in cancer treatment.

**NRF2 Blockade Suppresses Colon Tumor Angiogenesis by Inhibiting Hypoxia-Induced Activation of HIF-1α**

Tae-Hyoun Kim, Eu-gene Hur, Su-Jin Kang, Jung-Ae Kim, Dinesh Thapa, You Mie Lee, Sae Kwang Ku, Yunjin Jung, and Mi-Kyoung Kwak

Précis: Findings show how blocking the NRF2 system, an important modifier of oxidative stress signaling in cells, could be an effective way to control tumor growth and angiogenesis.

**Suppression of Glucosylceramide Synthase Restores p53-Dependent Apoptosis in Mutant p53 Cancer Cells**

Yong-Yu Liu, Gauri A. Patwardhan, Kaustubh Bhinge, Vineet Gupta, Xin Gu, and S. Michal Jazwinski

Précis: This study suggests that wild-type p53 function can be resuscitated in p53 mutant cancer cells by disrupting ceramide glycosylation, suggesting a tractable new strategy to treat p53 mutant cancers.

Activation of the Aryl Hydrocarbon Receptor AhR Promotes Retinoic Acid–Induced Differentiation of Myeloblastic Leukemia Cells by Restricting Expression of the Stem Cell Transcription Factor Oct4
Rodica P. Bunaciu and Andrew Yen

Précis: Findings suggest a mechanism-based rationale to enhance the therapeutic effects of retinoic acid, which is used to treat certain cancers, through co-treatment with activators of AhR signaling.

miR-218 Suppresses Nasopharyngeal Cancer Progression through Downregulation of Survivin and the SLIT2-ROBO1 Pathway
Nehad M. Alajes, Michelle Lenarduzzi, Emma Ito, Angela B.Y. Hui, Wei Shi, Jeff Bruce, Shijun Yue, Shao H. Huang, Wei Xu, John Waldron, Brian O'Sullivan, and Fei-Fei Liu

Précis: Findings suggest a tumor suppressor function for the microRNA mi-218 that integrates control of two important cell survival and migratory mechanisms.

MAP Kinase-Interacting Kinase 1 Regulates SMAD2-Dependent TGF-β Signaling Pathway in Human Glioblastoma
Michal Grzmil, Pier Jr Morin, Maria Maddalena Lino, Adrian Merlo, Stephan Frank, Yuhua Wang, Gerald Moncayo, and Brian A. Hemmings

Précis: Findings identify a pathway that controls translation of key cancer-related RNAs including SMAD2, a key component of the TGF-β-signaling pathway, with implications for targeting deadly brain tumors more effectively.

ABOUT THE COVER

Diminished angiogenesis in NRF2 knockdown colon cancer cells. Matrigel-loaded colon cancer cells (HCT116 and HT29) with stable expression of interfering RNA of NRF2 (NRF2i) were inoculated on the CAM of 10-day-old chicken embryos and the branch points of formed blood vessels were counted as a marker of angiogenesis. NRF2 knockdown cancer cells developed fewer blood vessels; the numbers of vessel branch points in HCT-NRF2i and HT-NRF2i cells reduced to 73% and 58% of those in the control cells (SCi). The data represent means ± SD of at least 8 embryos. For details, see the article by Kim and colleagues on page 2260 of this issue.
