<td>Harald Löfler, Anne Fechter, Marc Matuszewski, Rainer Safrich, Martin Mistrik, Joachim Marhold, Christin Hornung, Frank Westermann, Jiri Bartek, and Alwin Kramer</td>
<td><strong>Précis:</strong> The discovery how Cdk1 kinase is recruited to centrosomes advances understanding of how mitosis is controlled and why centrosome amplification and chromosomal breakage occur so commonly in cancer cells.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2140</td>
<td><strong>Oncogenic Synergism between ErbB1, Nucleolin, and Mutant Ras</strong></td>
<td>Keren Farin, Sari Schokoroy, Roni Haklai, Ifat Cohen-Or, Galit Elad-Sadidia, Merit E. Reyes-Reyes, Paula J. Bates, Adrienne D. Cox, Yoel Klaog, and Ronit Pinkas-Kramarski</td>
<td><strong>Précis:</strong> This study describes a fascinating protein complex that might be targeted as a general approach to attack the many human cancers driven by EGF family receptors and Ras small GTPases.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2152</td>
<td><strong>HSulf-1 Modulates FGF2- and Hypoxia-Mediated Migration and Invasion of Breast Cancer Cells</strong></td>
<td>Ashwani Khurana, Peng Liu, Pasquale Mellone, Laura Lorenzo, Bruno Vincenzi, Kaustubh Datta, Bo Yang, Robert J. Linhardt, Wilma Lingle, Jeremy Chien, Alfonso Baldi, and Viji Shridhar</td>
<td><strong>Précis:</strong> This study describes regulation of heparan sulfatease-1 by hypoxia leading to increased cell migration and invasion in breast cancer cells.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2162</td>
<td><strong>Identification of a Tumor Suppressor Relay between the FOXP3 and the Hippo Pathways in Breast and Prostate Cancers</strong></td>
<td>Weiquan Li, Lizhong Wang, Hiroto Katoh, Runhua Liu, Pan Zheng, and Yang Liu</td>
<td><strong>Précis:</strong> Findings define a functional connection between two important tumor suppressor pathways in cancer, with potential theranostic implications.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2172</td>
<td><strong>IMP-1 Displays Cross-Talk with K-Ras and Modulates Colon Cancer Cell Survival through the Novel Proapoptotic Protein CYFIP2</strong></td>
<td>Perry S. Mongroo, Felicite K. Noubissi, Miriam Cuatrecasas, Jiri Kalabis, Catrina E. King, Cameron N. Johnstone, Mark J. Bowser, Antoni Castells, Vladimir S. Spiegelman, and Anil K. Rustgi</td>
<td><strong>Précis:</strong> Findings indicate that the Myc-interacting protein IMP-1 acts upstream of K-Ras to promote survival through a novel mechanism that may be important in colon cancer pathogenesis.</td>
<td></td>
<td></td>
</tr>
<tr>

**Therapeutics, Targets, and Chemical Biology**

2230

**Targeted Signal-Amplifying Enzymes Enhance MRI of EGFR Expression in an Orthotopic Model of Human Glioma**
Mohammed S. Shahzeeb, Christopher H. Solak, Michael DeLeo III, and Alexei Bogdanov Jr.

**Précis:** Findings define a signal amplification and contrast agent retention strategy for in vivo imaging of gliomas expressing EGFRvIII variants that are best suited to treatment with therapeutic EGFR antibodies.

2240

**Heavy Chain Ferritin siRNA Delivered by Cationic Liposomes Increases Sensitivity of Cancer Cells to Chemotherapeutic Agents**
Xiaoli Liu, A.B. Madhankumar, Becky Slagle-Webb, Jonas M. Sheehan, Nodar Surguladze, and James R. Connor

**Précis:** Findings provide preclinical demonstration of a siRNA-based targeting and delivery approach that can be used to sensitize brain tumor cells to chemotherapy.

2250

**Influence of Affinity and Antigen Internalization on the Uptake and Penetration of Anti-HER2 Antibodies in Solid Tumors**

**Précis:** Determining the factors that influence how effectively a therapeutic antibody can penetrate tumors is important for optimizing efficacious effects in cancer treatment.

2260

**NRF2 Blockade Suppresses Colon Tumor Angiogenesis by Inhibiting Hypoxia-Induced Activation of HIF-1α**
Tae-Hyoung Kim, Eu-gene Hur, Su-Jin Kang, Jung-Ae Kim, Dinesh Thapa, You Mie Lee, Sae Kwang Ku, Yunjin Jung, and Mi-Kyoung Kwak

**Précis:** Findings show how blocking the NRF2 system, an important modifier of oxidative stress signaling in cells, could be an effective way to control tumor growth and angiogenesis.

2276

**Suppression of Glucosylceramide Synthase Restores p53-Dependent Apoptosis in Mutant p53 Cancer Cells**
Yong-Yu Liu, Gauri A. Patwardhan, Kaustubh Bhinge, Vineet Gupta, Xin Gu, and S. Michal Jazwinski

**Précis:** This study suggests that wild-type p53 function can be resuscitated in p53 mutant cancer cells by disrupting ceramide glycosylation, suggesting a tractable new strategy to treat p53 mutant cancers.

---

**Prevention and Epidemiology**

2222

**Contribution of Inherited Mutations in the BRCA2-Interacting Protein PALB2 to Familial Breast Cancer**
Silvia Casadei, Barbara M. Norquist, Tom Walsh, Sunday Stray, Jessica B. Mandell, Ming-K. Lee, John A. Stamatoyannopoulos, and Mary-Claire King

**Précis:** This study characterizes the mutational spectrum of the tumor suppressor gene PALB2, which is mutated in a fraction of familial breast cancer patients and is particularly strongly associated with male breast cancer and pancreatic cancer.
MYC Phosphorylation, Activation, and Tumorigenic Potential in Hepatocellular Carcinoma Are Regulated by HMG-CoA Reductase
Zhongwei Cao, Hua Fan-Minogue, David I. Bellovin, Aleksey Yevtodiyenko, Julia Arzeno, Qiwei Yang, Sanjiv Sam Gambhir, and Dean W. Felsher

Précis: The ability of statins to suppress MYC oncogenic activity suggests their evaluation as novel adjuvant modalities in cancer therapy.

Human CD59 Inhibitor Sensitizes Rituximab-Resistant Lymphoma Cells to Complement-Mediated Cytolysis
Weiguo Hu, Xiaowen Ge, Tao You, Ting Xu, Jinyan Zhang, Gongxiong Wu, Zhihai Peng, Michael Chorev, Bertal H. Aktas, Jose A. Halperin, Jennifer R. Brown, and Xuebin Qin

Précis: Findings rationalize a tractable method to reduce or abolish resistance to rituximab, a monoclonal antibody therapy used widely to treat certain common blood malignancies.

Overcoming Temozolomide Resistance in Glioblastoma via Dual Inhibition of NAD+ Biosynthesis and Base Excision Repair
Eva M. Goellner, Bradford Grimme, Ashley R. Brown, Ying-Chih Lin, Xiao-Hong Wang, Kelsey F. Sugrue, Leah Mitchell, Ram N. Trivedi, Jiang-bo Tang, and Robert W. Sobol

Précis: Temozolomide resistance in glioblastoma can be overcome by dual inhibition of NAD+ biosynthesis and base excision repair.

Genetic Ablation of PKC Epsilon Inhibits Prostate Cancer Development and Metastasis in Transgenic Mouse Model of Prostate Adenocarcinoma
Bilal Bin Hafeez, Weixiong Zhong, Jamey Weichert, Nancy E. Dreckschmidt, Mohammad Sarwar Jamal, and Ajit K. Verma

Précis: Findings provide first genetic evidence of the role of PKC epsilon in prostate cancer development and metastasis, suggesting novel preventive and therapeutic strategies.

DCAMKL-1 Regulates Epithelial–Mesenchymal Transition in Human Pancreatic Cells through a miR-200a–Dependent Mechanism

Précis: Findings indicate that a microtubule associated kinase previously identified as a pancreatic stem cell marker can serve as an effective therapeutic target in pancreatic cancer treatment.

Outgrowth of Drug-Resistant Carcinomas Expressing Markers of Tumor Aggression after Long-term TßR/II Kinase Inhibition with LY2109761
Erin C. Connolly, Elise F. Saunier, David Quigley, Minh Thu Lau, Angela De Sapio, Byron Hann, Jonathan M. Yingling, and Rosemary J. Akhurst

Zyxin Is a Critical Regulator of the Apoptotic HIPK2-p53 Signaling Axis
Johanna Crone, Carolina Glas, Kathrin Schultheiss, Jutta Moehlenbrink, Eva Krieghoff-Henning, and Thomas G. Hofmann

Précis: Findings identify Zyxin as novel regulator of DNA damage-induced cell death through controlling the HIPK2-p53 signaling axis.

Histone Methyltransferase EZH2 Induces Akt-Dependent Genomic Instability and BRCA1 Inhibition in Breast Cancer
Maria E. Gonzalez, Matthew L. DuPrie, Heather Krueger, Sofia D. Merajver, Alejandra C. Ventura, Kathy A. Toy, and Celina G. Kleer

Précis: Findings offer mechanistic insight into how elevated activity of an important chromatin modifier drives breast cancer progression.
Activation of the Aryl Hydrocarbon Receptor AhR Promotes Retinoic Acid–Induced Differentiation of Myeloblastic Leukemia Cells by Restricting Expression of the Stem Cell Transcription Factor Oct4

Rodica P. Bunaciu and Andrew Yen

Précis: Findings suggest a mechanism-based rationale to enhance the therapeutic effects of retinoic acid, which is used to treat certain cancers, through co-treatment with activators of AhR signaling.

miR-218 Suppresses Nasopharyngeal Cancer Progression through Downregulation of Survivin and the SLIT2-ROBO1 Pathway

Nehad M. Alajez, Michelle Lenarduzzi, Emma Ito, Angela B.Y. Hui, Wei Shi, Jeff Bruce, Shijun Yue, Shao H. Huang, Wei Xu, John Waldron, Brian O’Sullivan, and Fei-Fei Liu

Précis: Findings suggest a tumor suppressor function for the microRNA mi-218 that integrates control of two important cell survival and migratory mechanisms.

MAP Kinase-Interacting Kinase 1 Regulates SMAD2-Dependent TGF-β Signaling Pathway in Human Glioblastoma

Michal Grzmił, Pier Jr Morin, Maria Maddalena Lino, Adrian Merlo, Stephan Frank, Yuhua Wang, Gerald Moncayo, and Brian A. Hemmings

Précis: Findings identify a pathway that controls translation of key cancer-related RNAs including SMAD2, a key component of the TGF-β-signaling pathway, with implications for targeting deadly brain tumors more effectively.

LETTER TO THE EDITOR

Essential Requirement for PP2A Inhibition by the Oncogenic Receptor c-KIT Suggests PP2A Reactivation as a Strategy to Treat c-KIT+ Cancers — Letter

Amaury G. Dumont, David G. Reynoso, and Jonathan C. Trent

Essential Requirement for PP2A Inhibition by the Oncogenic Receptor c-KIT Suggests PP2A Reactivation as a Strategy to Treat c-KIT+ Cancers — Response

Kathryn G. Roberts, Fiona McDougall, and Nicole M. Verrills

ABOUT THE COVER

Diminished angiogenesis in NRF2 knockdown colon cancer cells. Matrigel-loaded colon cancer cells (HCT116 and HT29) with stable expression of interfering RNA of NRF2 (NRF2i) were inoculated on the CAM of 10-day-old chicken embryos and the branch points of formed blood vessels were counted as a marker of angiogenesis. NRF2 knockdown cancer cells developed fewer blood vessels; the numbers of vessel branch points in HCT-NRF2i and HT-NRF2i cells reduced to 73% and 58% of those in the control cells (SCI). The data represent means ± SD of at least 8 embryos. For details, see the article by Kim and colleagues on page 2260 of this issue.
