BREAKING ADVANCES

1 Highlights from Recent Cancer Literature

REVIEWS

3 Targeting the Insulin-like Growth Factor Axis for the Development of Novel Therapeutics in Oncology
Jin Gao, Yong S. Chang, Bahija Jallal, and Jaye Viner

13 Transcriptional and Nontranscriptional Functions of E2F1 in Response to DNA Damage
Anup K. Biswas and David G. Johnson

PERSPECTIVE

18 Finding a Panacea among Combination Cancer Therapies
Ryuji Yamaguchi and Guy Perkins

CLINICAL STUDIES

24 Immunomonitoring Results of a Phase II/III Study of Malignant Ascites Patients Treated with the Trifunctional Antibody Catumaxomab (Anti-EpCAM × Anti-CD3)
Michael Jager, Alexandra Schobeth, Peter Ruf, Juergen Hess, Michael Hennig, Barbara Schmalfeldt, Pauline Wimberger, Michael Strohlein, Bettina Theissen, Markus M. Heiss, and Horst Lindhofer

INTEGRATED SYSTEMS AND TECHNOLOGIES

33 A Novel Method of Transcriptional Response Analysis to Facilitate Drug Repositioning for Cancer Therapy
Guangxin Jin, Changhe Fu, Hong Zhao, Kemi Cui, Jenny Chang, and Stephen T.C. Wong

MICROENVIRONMENT AND IMMUNOLOGY

45 Defective NF-κB Signaling in Metastatic Head and Neck Cancer Cells Leads to Enhanced Apoptosis by Double-Stranded RNA
Naoki Umemura, Jianzhong Zhu, Yvonne K. Mbure, Adriana Forero, Paishiun N. Hsieh, Ravikumar Muthuswamy, Pawel Kalinski, Robert L. Ferris, and Saumendra N. Sarkar

56 ATM-Mediated DNA Damage Signals Mediate Immune Escape through Integrin-αvβ3–Dependent Mechanisms
Masahisa Jinushi, Shigeki Chiba, Muhammad Baghdadi, Ichiro Kinoshita, Hiroshi Dosaka-Akita, Koyu Ito, Hironori Yoshiyama, Hideo Yagita, Toshimitsu Uede, and Akinori Takaoka

Précis: By developing a systematic approach to characterize off-target effects of drugs, this study may help speed the repositioning of existing approved and generic drugs for alternate uses in cancer treatment, addressing a huge but largely ignored opportunity in cancer research with obvious benefits to healthcare cost management.

Précis: This study reveals that metastatic cells have a specific sensitivity to a certain class of Toll-receptor ligands, suggesting ways to exploit these ligands to improve targeted tumor therapy.

Précis: This study offers a mechanistic explanation for the robust clinical response observed in advanced cancer patients with malignant ascites who are treated with an important new type of immunotherapy for this deadly condition.

Précis: Constitutive DNA damage signals in cancer cells may promote immune escape by upregulating cell surface expression of integrin αvβ3, which may target dendritic cell functions needed for effective immune control.
A Dynamic Inflammatory Cytokine Network in the Human Ovarian Cancer Microenvironment

Précis: Key pathways involved in cancer-associated inflammation and Notch signaling appear to contribute to an autocrine cell network in ovarian cancer, with implications for new therapeutic approaches.

Activated STAT5 Promotes Long-Lived Cytotoxic CD8⁺ T Cells That Induce Regression of Autochthonous Melanoma
Magali Grange, Michel Buferne, Grégory Verdeil, Lee Leserman, Anne-Marie Schmitt-Verhulst, and Nathalie Auphan-Anezin

Précis: Activation of the transcription factor STAT5 in cytolytic T cells improves their antitumor potency, including by improving recall responses suppressed by the tumor microenvironment, suggesting new strategies to improve the durability of adoptive T-cell immunotherapy.

GLI1 Inhibition Promotes Epithelial-to-Mesenchymal Transition in Pancreatic Cancer Cells
Simon Joost, Luciana L. Almada, Verena Rohnalter, Philipp S. Holz, Anne M. Vraebel, Maite G. Fernandez-Barrena, Robert R. McWilliams, Matthias Lauth

Précis: Strategies to restore the signals mediated by a key effector transcription factor in the Hedgehog pathway may abolish the malignant character of pancreatic cancer cells by restoring their ability to undergo epithelial differentiation.

Identification of Genes Upregulated in ALK-Positive and EGFR/KRAS/ALK-Negative Lung Adenocarcinomas
Hirokazu Okayama, Takashi Kohno, Yuko Ishii, Yoko Shimada, Kouya Shiraiishi, Reika Iwakawa, Koh Furuta, Koji Tsuta, Tatsuhiro Shibata, Seiichiro Yamamoto, Shun-ichi Watanabe, Hiromi Sakamoto, Kensuke Kumamoto, Seiichi Takenoshita, Noriko Gotoh, Hideaki Mizuno, Akimori Sarai, Shuichiro Kawano, Rui Yamaguchi, Satoru Miyano, and Jun Yokota

Précis: Findings provide a molecular basis to stratify more or less aggressive subgroups of lung adenocarcinomas lacking EGFR, KRAS and ALK mutations, possibly helping identify patients who may gain the most benefit from adjuvant chemotherapy after surgical resection.

Integrative Genomic Analyses of Sporadic Clear Cell Renal Cell Carcinoma Define Disease Subtypes and Potential New Therapeutic Targets

Précis: This study defines 2 new extracellular oncoproteins elevated by common amplification of chromosome 5q in deadly kidney cancers, with potential implications for improving therapeutic management.

CXCR4 Activation Defines a New Subgroup of Sonic Hedgehog–Driven Medulloblastoma
Rajarshi Sengupta, Adrian Dubuc, Stacey Ward, Lihua Yang, Paul Northcott, B. Mark Woerner, Kirsten Kroll, Jingxin Luo, Michael D. Taylor, Robert J. Wechsler-Reya, and Joshua B. Rubin

Précis: In defining a molecular subgroup of deadly pediatric brain tumors, this study provides a rationale to clinically evaluate a new combination of 2 experimental targeted drugs that might dramatically improve treatment.

Metastasis Suppressor NM23-H1 Promotes Repair of UV-Induced DNA Damage and Suppresses UV-Induced Melanomagenesis
Stuart G. Jarrett, Marian Novak, Sandrine Dabernat, Jean-Yves Daniel, Isabel Mellon, Qingbei Zhang, Nathan Harris, Michael J. Ciesielski, Robert A. Fenstermaker, Diane Kovacic, Andrzej Slominski, and David M. Kaetzel

Précis: Identification of a DNA repair-promoting function defined for the metastasis suppressor NM23 may shed light on how it can suppress formation of UV-induced melanoma.
Contrasting Behavior of the p18\textsuperscript{INK4c} and p16\textsuperscript{INK4a} Tumor Suppressors in Both Replicative and Oncogene-Induced Senescence

Sladjanagagrica, Sharronbrookes, Emma Anderton, Janice Rowe, and Gordon Peters

\textbf{Précis:} The closely related CDK inhibitors p16\textsuperscript{INK4a} and p18\textsuperscript{INK4c} are tumor suppressors that behave differently during replicative senescence and oncogene-induced senescence, suggesting that their inactivation in human cancer is driven by different selective pressures.

Global Characterization of the SRC-1 Transcriptional Targets of the SRY-HMG Box Transcription Factor SOX4 Link Its Expression to the Development of Small Cell Lung Cancer

Sandra D. Castillo, Ander Mathieu, Niccolo Mariani, Julian Carretero, Fernando Lopez-Bous, Robin Lovell-Badge, and Montse Sanchez-Cespedes

\textbf{Précis:} Small-cell lung cancer, a type of lung cancer with neuroendocrine characteristics, is found to be driven by a family of transcription factors involved in neuronal development that exert oncogenic effects in this setting.

Autocrine CSF-1 and CSF-1 Receptor Coexpression Promotes Renal Cell Carcinoma Growth

Julia Menke, Jörg Kriegsmann, Carl Christoph Schimanski, Melvin M. Schwartz, Andreas Schwarting, and Vicki R. Kelley

\textbf{Précis:} Strategies to target a supportive macrophage pathway in breast cancer might also be effective in more aggressive renal cancers that master the kidney microenvironment to directly adopt this autocrine loop.

Use of Multifunctional Sigma-2 Receptor Ligand Conjugates to Trigger Cancer-Selective Cell Death Signaling

\textbf{Précis:} Findings provide proof of principle for a modular drug platform using ligands to the sigma-2 receptor, which is highly expressed on many types of human cancer cells, as a target to selectively deliver proapoptotic drugs.

Intermittent Administration of MEK Inhibitor GDC-0973 plus PI3K Inhibitor GDC-0941 Triggers Robust Apoptosis and Tumor Growth Inhibition

Klaus P. Hoellrich, Mark Merchant, Christine Orr, Jocelyn Chan, Doug Den Otter, Leanne Berry, Ian Kasman, Hartmut Koeppen, Ken Rice, Nai-Ying Yang, Stefan Engst, Stuart Johnston, Lori S. Friedman, and Marcia Belvin

\textbf{Précis:} Continuous suppression of pathway signaling is apparently not required for the combinatorial efficacy of a MEK inhibitor plus a PI3K inhibitor, contrary to what might have been expected.

Global Characterization of the SRC-1 Transcriptionome Identifies ADAM22 as an ER-Independent Mediator of Endocrine-Resistant Breast Cancer

Damian McCurtain, Jarlath C. Bolger, Allis Fagan, Christopher Byrne, Yuan Hao, Li Qin, Marie Millroy, Jianming Xu, Arnold D. Hill, Peadar Ó Gaora, and Leonie S. Young

\textbf{Précis:} Findings suggest new insights into how breast tumors switch from hormone-sensitive to hormone-resistant states, also revealing a novel prognostic and therapeutic target that may improve treatment of hormone-resistant tumors.

The White Adipose Tissue Used in Lipotransfer Procedures Is a Rich Reservoir of CD34+ Progenitors Able to Promote Cancer Progression

Ines Martin-Padura, Giuliana Gregato, Paola Marighetti, Patrizia Mancuso, Angelica Calleri, Chiara Corsini, Giancarlo Pruneri, Michela Manzotti, Visnu Lohsiriwat, Mario Rietjens, Jean-Yves Petit, and Francesco Bertolini

Précis: This study suggests that there might be risks involved in autologous transfer of white adipose tissue, a surgical procedure employed in certain breast cancer patients, due to the large numbers of a stem cell population that has strongly prometastatic properties in that tissue.

Curcumin Analogue CDF Inhibits Pancreatic Tumor Growth by Switching on Suppressor microRNAs and Attenuating EZH2 Expression

Précis: A synthetic derivative of curcumin, the chief bioactive component of the spice turmeric used for thousands of years in Indian Ayurvedic medicine, is found to de-repress expression of microRNAs that inhibit a master epigenetic driver of cancer cell proliferation and invasion.

Mesenchymal Stromal Cell Mutations and Wound Healing Contribute to the Etiology of Desmoid Tumors

Adelaide M. Carothers, Hira Rizvi, Rian M. Hasson, Yvonne I. Heit, Jennifer S. Davids, Monica M. Bertagnolli, and Nancy L. Cho

Précis: Findings implicate mesenchymal stromal cells in the etiology of desmoid tumors, often associated with familial colon cancer syndromes, and they suggest novel strategies for systemic treatment of this disease.

Metabolomic NMR Fingerprinting to Identify and Predict Survival of Patients with Metastatic Colorectal Cancer

Ivano Bertini, Stefano Cacciare, Benny V. Jensen, Jakob V. Schou, Julia S. Johansen, Mogens Bruusfeld, Claudio Luchinat, Dorte L. Nielsen, and Paola Turano

Précis: The metabolomic signature derived from patients with metastatic colorectal cancer predicts overall survival and provides insight into potential new biomarkers that can be used to predict disease progression and personalize treatment.

ERK1/2 Regulation of CD44 Modulates Oral Cancer Aggressiveness

Nancy P. Judd, Ashley E. Winkler, Oihana Murillo-Sauca, Joshua J. Brotman, Jonathan H. Law, James S. Lewis, Jr, Gavin P. Dunn, Jack D. Bui, John B. Sunwoo, and Ravindra Uppaluri

Précis: A pivotal regulator of stem cell function is a crucial downstream effector in the ERK1/2 pathway that mediates the growth of oral squamous carcinomas, which are rising rapidly in incidence in developed countries.

Correction: LY303511 Enhances TRAIL Sensitivity of SHEP-1 Neuroblastoma Cells via Hydrogen Peroxide–Mediated Mitogen-Activated Protein Kinase Activation and Up-regulation of Death Receptors

A Journal of the American Association for Cancer Research vii www.aacrjournals.org

CORRECTION

Correction: LY303511 Enhances TRAIL Sensitivity of SHEP-1 Neuroblastoma Cells via Hydrogen Peroxide–Mediated Mitogen-Activated Protein Kinase Activation and Up-regulation of Death Receptors
ABOUT THE COVER

Brain metastases of breast and other cancers are increasing in incidence and limiting the gains made by systemic therapy. Here, brain-tropic human metastatic breast cancer cells overexpressing pigment epithelium–derived factor rapidly became apoptotic when implanted into a mouse brain. Red, human mitochondria (tumor cells); green, cleaved caspase-3 stain (apoptosis); blue, DAPI. For details, see the article by Fitzgerald and colleagues on page 144 of this issue.
