**BREAKING ADVANCES**

1 Highlights from Recent Cancer Literature

**REVIEWS**

3 Targeting the Insulin-like Growth Factor Axis for the Development of Novel Therapeutics in Oncology
Jin Gao, Yong S. Chang, Bahija Jallal, and Jaye Viner

13 Transcriptional and Nontranscriptional Functions of E2F1 in Response to DNA Damage
Anup K. Biswas and David G. Johnson

**PERSPECTIVE**

18 Finding a Panacea among Combination Cancer Therapies
Ryuji Tamaguchti and Guy Perkins

**CLINICAL STUDIES**

24 Immunomonitoring Results of a Phase II/III Study of Malignant Ascites Patients Treated with the Trifunctional Antibody Catumaxomab (Anti-EpCAM X Anti-CD3)
Michael Jager, Alexandra Schobeth, Peter Ruf, Juergen Hess, Michael Hennig, Barbara Schmalfeldt, Pauline Wimberger, Michael Stroehlein, Bettina Theissen, Markus M. Heiss, and Horst Lindhofer

33 A Novel Method of Transcriptional Response Analysis to Facilitate Drug Repositioning for Cancer Therapy
Guangxin Jin, Changhe Fu, Hong Zhao, Kemi Cui, Jenny Chang, and Stephen T.C. Wong

**INTEGRATED SYSTEMS AND TECHNOLOGIES**

33 Precis: By developing a systematic approach to characterize off-target effects of drugs, this study may help speed the repositioning of existing approved and generic drugs for alternate uses in cancer treatment, addressing a huge but largely ignored opportunity in cancer research with obvious benefits to health care cost management.

45 Defective NF-κB Signaling in Metastatic Head and Neck Cancer Cells Leads to Enhanced Apoptosis by Double-Stranded RNA
Naoki Umemura, Jianzhong Zhu, Yvonne K. Mburu, Adriana Forero, Paishun N. Hsieh, Ravikumar Muthuswamy, Pawel Kalinski, Robert L. Ferris, and Saumendra N. Sarkar

**MICROENVIRONMENT AND IMMUNOLOGY**

45 Precis: This study reveals that metastatic cells have a specific sensitivity to a certain class of Toll-receptor ligands, suggesting ways to exploit these ligands to improve targeted tumor therapy.

56 ATM-Mediated DNA Damage Signals Mediate Immune Escape through Integrin-αvβ3–Dependent Mechanisms
Masahisa Jinushi, Shigeki Chiba, Muhammad Baghdadi, Ichiro Kinoshita, Hiroshi Dosaka-Akita, Koyu Ito, Hironori Yoshiyama, Hideo Yagita, Toshimitsu Uede, and Akinori Takaoka

Precis: Constitutive DNA damage signals in cancer cells may promote immune escape by upregulating cell surface expression of integrin αvβ3, which may target dendritic cell functions needed for effective immune control.

Novel Transcriptional Targets of the Contrasting Behavior of the A Combined Array-Based Comparative Genomic Hybridization and Functional Library Screening Approach Identifies mir-30d as an Oncomir in Cancer A cytokine previously linked to tumor angiogenesis is discovered to suppress metastasis to the brain, where it also helps preserve neuronal survival, thereby acting through 2 unrecognized mechanisms to blunt metastatic spread and its consequences in the brain.

A Combined Array-Based Comparative Genomic Hybridization and Functional Library Screening Approach Identifies mir-30d As an Oncomir in Cancer

Précis: Identification of oncogenic microRNAs by the approach validated in this study may help complete characterization of this class of potentially important theranostic markers.

Contrasting Behavior of the p18INK4c and p16INK4a Tumor Suppressors in Both Replicative and Oncogene-Induced Senescence

Précis: The closely related CDK inhibitors p16INK4a and p18INK4c are tumor suppressors that behave differently during replicative senescence and oncogene-induced senescence, suggesting that their inactivation in human cancer is driven by different selective pressures.

Novel Transcriptional Targets of the SRY-HMG Box Transcription Factor SOX4 Link Its Expression to the Development of Small Cell Lung Cancer

Précis: Small-cell lung cancer, a type of lung cancer with neuroendocrine characteristics, is found to be driven by a family of transcription factors involved in neuronal development that exert oncogenic effects in this setting.

Autocrine CSF-1 and CSF-1 Receptor Coexpression Promotes Renal Cell Carcinoma Growth

Précis: Strategies to target a supportive macrophage pathway in breast cancer might also be effective in more aggressive renal cancers that master the kidney microenvironment to directly adopt this autocrine loop.

Use of Multifunctional Sigma-2 Receptor Ligand Conjugates to Trigger Cancer-Selective Cell Death Signaling

Précis: Findings provide proof of principle for a modular drug platform using ligands to the sigma-2 receptor, which is highly expressed on many types of human cancer cells, as a target to selectively deliver proapoptotic drugs.

Intermittent Administration of MEK Inhibitor GDC-0973 plus PI3K Inhibitor GDC-0941 Triggers Robust Apoptosis and Tumor Growth Inhibition

Précis: Continuous suppression of pathway signaling is apparently not required for the combinatorial efficacy of a MEK inhibitor plus a PI3K inhibitor, contrary to what might have been expected.

Global Characterization of the SRC-1 Transcriptome Identifies ADAM22 as an ER-Independent Mediator of Endocrine-Resistant Breast Cancer

Précis: Findings suggest new insights into how breast tumors switch from hormone-sensitive to hormone-resistant states, also revealing a novel prognostic and therapeutic target that may improve treatment of hormone-resistant tumors.
HMGB1 Promotes Drug Resistance in Osteosarcoma
Jun Huang, Jiangdong Ni, Ke Liu, Yan Yu, Min Xie, Rui Kang, Philip Vernon, Lizhi Cao, and Daolin Tang

Précis: A protein implicated in chromatin binding and immune signaling contributes to chemotherapeutic resistance in osteosarcoma, revealing a novel therapeutic target for an often chemoresistant disease.

Dual Inhibition of the PI3K/mTOR Pathway Increases Tumor Radiosensitivity by Normalizing Tumor Vasculature
Emmanouil Fokas, Jae Hong Im, Sally Hill, Sabira Yameen, Michael Stratford, John Beech, Wolfgang Hackl, Sauveur-Michel Maira, Eric J. Bernhard, W. Gillies McKenna, and Ruth J. Muschel

Précis: This study offers a preclinical rationale for the clinical evaluation of dual inhibitors of the PI3K and mTOR pathways which can normalize the blood vasculature of solid tumors to enhance their radiosensitivity, with potentially broad implications to treat all types of solid tumors.

Expression and Function of Survivin in Canine Osteosarcoma

Précis: This study demonstrates the potential translational utility of canine osteosarcoma for the investigation of survivin-directed therapeutics.

Norathyriol Suppresses Skin Cancers Induced by Solar Ultraviolet Radiation by Targeting ERK Kinases
Jixia Li, Margarita Malakhova, Madhusoodanan Mottamal, Kanamata Reddy, Igor Kurinov, Andria Carper, Alyssa Langfald, Naomi Oi, Myoung Ok Kim, Feng Zhu, Carlos P. Sosa, Keyuan Zhou, and Zigang Dong

Précis: A natural product found in mango fruit that was discovered by a screen of the Chinese Medicine Library is shown to be an effective new chemopreventive agent for UV-induced skin cancer.

Genetically Modified T cells Targeting Interleukin-11 Receptor α-Chain Kill Human Osteosarcoma Cells and Induce the Regression of Established Osteosarcoma Lung Metastases
Gangxiong Huang, Ling Yu, Laurence J.N. Cooper, Mario Hollomon, Helen Huls, and Eugenie S. Kleinerman

Précis: T cells expressing chimeric antigen receptors (CART cells) show enormous promise for cancer treatment, as illustrated here in treating lung metastases for deadly bone cancers.

EZH2 Mediates Epigenetic Silencing of Neuroblastoma Suppressor Genes CASZ1, CLI, RUNX3, and NGFR
Chunxi Wang, Zhihui Liu, Chan-Wook Woo, Zhijie Li, Lifeng Wang, Jun S. Wei, Victor E. Marquez, Susan E. Bates, Qihuang Jin, Javed Khan, Kai Ge, and Carol J. Thiele

Précis: Dysregulation of a single targetable histone methyltransferase is found to be a core contributor to neuroblastoma phenotypes, highlighting a novel general approach to treat this common and deadly pediatric tumor.
The White Adipose Tissue Used in Lipotransfer Procedures Is a Rich Reservoir of CD34⁺ Progenitors Able to Promote Cancer Progression
Ines Martin-Padura, Giuliana Gregato, Paola Marighetti, Patrizia Mancuso, Angelica Celleri, Chiara Corsini, Giancarlo Pruneri, Michela Manzotti, Visnu Lohsiriwat, Mario Rietjens, Jean-Yves Petit, and Francesco Bertolini

Précis: This study suggests that there might be risks involved in autologous transfer of white adipose tissue, a surgical procedure employed in certain breast cancer patients, due to the large numbers of a stem cell population that has strongly prometastatic properties in that tissue.

Curcumin Analogue CDF Inhibits Pancreatic Tumor Growth by Switching on Suppressor microRNAs and Attenuating EZH2 Expression

Précis: A synthetic derivative of curcumin, the chief bioactive component of the spice turmeric used for thousands of years in Indian Ayurvedic medicine, is found to de-repress expression of microRNAs that inhibit a master epigenetic driver of cancer cell proliferation and invasion.

Mesenchymal Stromal Cell Mutations and Wound Healing Contribute to the Etiology of Desmoid Tumors
Adelaide M. Carothers, Hira Rizvi, Rian M. Hasson, Yvonne L. Heit, Jennifer S. Davids, Monica M. Bertagnolli, and Nancy L. Cho

Précis: Findings implicate mesenchymal stromal cells in the etiology of desmoid tumors, often associated with familial colon cancer syndromes, and they suggest novel strategies for systemic treatment of this disease.

Metabolomic NMR Fingerprinting to Identify and Predict Survival of Patients with Metastatic Colorectal Cancer
Ivano Bertini, Stefano Cacciatore, Benny V. Jensen, Jakob V. Schou, Julia S. Johansen, Mogens Kruhøller, Claudio Luchinat, Dorte L. Nielsen, and Paola Turano

Précis: The metabolomic signature derived from patients with metastatic colorectal cancer predicts overall survival and provides insight into potential new biomarkers that can be used to predict disease progression and personalize treatment.

ERK1/2 Regulation of CD44 Modulates Oral Cancer Aggressiveness
Nancy P. Judd, Ashley E. Winkler, Oihana Murillo-Saucca, Joshua J. Brotman, Jonathan H. Law, James S. Lewis, Jr, Gavin P. Dunn, Jack D. Bui, John B. Sunwoo, and Ravindra Uppaluri

Précis: A pivotal regulator of stem cell function is a crucial downstream effector in the ERK1/2 pathway that mediates the growth of oral squamous carcinomas, which are rising rapidly in incidence in developed countries.

Correction: LY303511 Enhances TRAIL Sensitivity of SHEP-1 Neuroblastoma Cells via Hydrogen Peroxide–Mediated Mitogen-Activated Protein Kinase Activation and Up-regulation of Death Receptors
A Journal of the American Association for Cancer Research vii www.aacrjournals.org

Downloaded from cancerres.aacrjournals.org on July 25, 2017. © 2012 American Association for Cancer Research.
ABOUT THE COVER

Brain metastases of breast and other cancers are increasing in incidence and limiting the gains made by systemic therapy. Here, brain-tropic human metastatic breast cancer cells overexpressing pigment epithelium–derived factor rapidly became apoptotic when implanted into a mouse brain. Red, human mitochondria (tumor cells); green, cleaved caspase-3 stain (apoptosis); blue, DAPI. For details, see the article by Fitzgerald and colleagues on page 144 of this issue.
