Phosphoproteomics Identifies Driver Tyrosine Kinases in Sarcoma Cell Lines and Tumors

Yun Bai, Jianmeng Li, Bin Fang, Arthur Edwards, Guodin Zhang, Marilyn Bui, Steven Eschrich, Soner Altintok, John Koomen, and Eric B. Haura

 précis: Global assessment of tyrosine phosphorylation, coupled with functional screens, is used to identify tyrosine kinases driving cell growth and survival in sarcoma, thereby offering insight into new therapeutic strategies for these deadly tumors.

AMPKα Modulation in Cancer Progression: Multilayer Integrative Analysis of the Whole Transcriptome in Asian Gastric Cancer

Yon Hui Kim, Han Liang, Xiuping Liu, Ju-Seog Lee, Jae Yong Cho, Jae-Ho Cheong, Hoguen Kim, Min Li, Thomas J. Downey, Matthew D. Dyer, Yongming Sun, Jintao Sun, Ellen M. Beasley, Hyun Cheol Chung, Sung Hoon Noh, John N. Weinstein, Chang-Gong Liu, and Garth Powis

 précis: The requirement for c-Src in tumor invasion evoked by oncogenic Ras has implications for the development of therapies to target the Ras pathway, long a goal of the field.

Cyclophosphamide Creates a Receptive Microenvironment for Prostate Cancer Skeletal Metastasis

Serk In Park, Jinhui Liao, Janice E. Berry, Xin Li, Amy J. Koh, Megan E. Michalski, Matthew R. Eber, Fabiana N. Soki, David Sadler, Sudha Sud, Sandra Tisdelle, Stephanie D. Daignault, Jeffrey A. Nemeth, Linda A. Snyder, Thomas J. Wronska, Kenneth J. Pienta, and Laurie K. McCauley

 précis: The chemotherapeutic drug cyclophosphamide, used in the treatment of many kinds of cancer, is found unexpectedly to exert a prometastatic effect within bone.
Hepatocyte–Stellate Cell Cross-Talk in the Liver Engenders a Permissive Inflammatory Microenvironment That Drives Progression in Hepatocellular Carcinoma
Cédric Coulouarn, Anne Corlu, Denise Glaise, Isabelle Guénon, Snorri S. Thorgeirsson, and Bruno Clément

MOLECULAR AND CELLULAR PATHOBIOLOGY

Parkin Pathway Activation Mitigates Glioma Cell Proliferation and Predicts Patient Survival

KRas Induces a Src/PEAK1/ErbB2 Kinase Amplification Loop That Drives Metastatic Growth and Therapy Resistance in Pancreatic Cancer
Jonathan A. Kelber, Theresa Reno, Sharmeeza Kaushal, Cristina Metildi, Tracy Wright, Konstantin Stoletov, Jessica M. Weems, Frederick D. Park, Evangeline Mose, Yingchun Wang, Robert M. Hoffman, Andrew M. Lowy, Michael Bouvet, and Richard L. Klemke

THERAPEUTICS, TARGETS, AND CHEMICAL BIOLOGY

Loss of Cell-Surface Laminin Anchoring Promotes Tumor Growth and Is Associated with Poor Clinical Outcomes
Armin Akhavan, Obi L. Griffith, Liliana Soroceno, Dmitri Leonoudakis, Maria Gloria Luciani-Torres, Annelene Daemen, Joe W. Gray, and John L. Muschler

Interleukin-17 Promotes Formation and Growth of Prostate Adenocarcinoma in Mouse Models
Quyang Zhang, Sen Liu, Dongxia Ge, Qingsong Zhang, Yun Xue, Zhenggang Xiong, Asim B. Abdel-Mageed, Leann Myers, Steven M. Hill, Brian G. Rowan, Oliver Sartor, Jonathan Melamed, Zhenbang Chen, and Zongbing You

Dinitroazetidines Are a Novel Class of Anticancer Agents and Hypoxia-Activated Radiation Sensitizers Developed from Highly Energetic Materials
Shoucheng Ning, Mark Bednarski, Bryan Oronsky, Jan Scicinski, Gordon Saul, and Susan J. Knox

Coxsackievirus B3 Is an Oncolytic Virus with Immunostimulatory Properties That Is Active against Lung Adenocarcinoma
Shohei Miyamoto, Hiroyuki Inoue, Takahumi Nakamura, Meiko Yamada, Chika Sakamoto, Yasuo Urata, Toshihiko Okazaki, Tomotoshi Marumoto, Atsushi Takahashi, Koichi Takayama, Yoichi Nakanishi, Hiroyuki Shimizu, and Kenzaburo Tani

While oncolytic viruses have failed as yet to realize clinical potential, this study defines a potent virus that by exerting adjuvant immunostimulatory properties may yield a unique and more effective antitumor activity.
Activation of Ras/P13K/ERK Pathway Induces c-Myc Stabilization to Upregulate Argininosuccinate Synthetase, Leading to Arginase Resistance in Melanoma Cells

Wen-Bin Tsai, Isamu Aiba, Yan Long, Hui-Kuan Lin, Lynn Feun, Niramol Savaraj, and Macus Tien Kuo

Précis: Findings offer mechanistic insight into how resistance emerges to arginine deprivation therapy and how inhibitors of the Ras/ERK and PI3K/AKT pathways might restore therapeutic responses.

Mitochondria-Targeted Drugs Synergize with 2-Deoxyglucose to Trigger Breast Cancer Cell Death

Gang Cheng, Jacek Zielonka, Brian P. Dranka, Donna McAllister, A. Craig Mackinnon Jr, Joy Joseph, and Balaraman Kalyanaraman

Précis: This important study may crack the long-standing challenge of how to employ the glycolytic inhibitor 2-deoxyglucose for generalized anticancer therapy, by combining it with mitochondria-targeted cationic compounds that can improve cancer cell cytotoxicity without toxic liabilities to normal tissue.

Smac Mimetic LBW242 Sensitizes XIAP-Overexpressing Neuroblastoma Cells for TNF-α-Independent Apoptosis

Georg Eschenburg, Angelika Eggert, Alexander Schramm, Holger N. Lose, and Patrick Hundsdorfer

Précis: Smac mimetics offer a potential adjuvant approach to sensitize or re-sensitize tumors to chemotherapy, as illustrated by this preclinical proof-of-concept study in a commonly deadly type of pediatric cancer.

Epidermal Growth Factor Receptor Variant III Contributes to Cancer Stem Cell Phenotypes in Invasive Breast Carcinoma

Catherine A. Del Vecchio, Kristin C. Jensen, Ryan T. Nitta, A. Hunter Shain, Craig P. Giacomini, and Albert J. Wong

Précis: By identifying breast cancer stem cells that express a variant EGFR receptor, this study has implications for how to improve treatment for patients who harbor this variant receptor.

HER3 is Required for HER2-Induced Preneoplastic Changes to the Breast Epithelium and Tumor Formation

David B. Vaught, Jamie C. Stanford, Christian Young, Donna J. Hicks, Frank Wheeler, Cammie Rinehart, Violeta Sánchez, John Koland, William J. Muller, Carlos L. Arteaga, and Rebecca S. Cook

Précis: Findings offer a preclinical proof-of-concept for a new strategy to treat or prevent HER2-amplified breast cancers, which represent nearly 30% of all breast cancers, by targeting an important heterodimeric partner of HER2.

Real-Time Monitoring of Rare Circulating Hepatocellular Carcinoma Cells in an Orthotopic Model by In Vivo Flow Cytometry Assesses Resection on Metastasis

Zhi-Chao Fan, Jun Yan, Guang-Da Liu, Xiao-Ying Tan, Xiao-Fu Weng, Wei-Zhong Wu, Jian Zhou, and Xun-Bin Wei

Précis: In vivo flow cytometry may offer a breakthrough technology to elucidate mechanisms of hematogenous metastasis and to monitor the efficacy of cancer therapy.

ABOUT THE COVER

Interleukin-17 (IL-17) is a key proinflammatory cytokine involved in many inflammatory and autoimmune diseases. Mice with conditional knockout of PTEN tumor suppressor gene developed invasive prostate adenocarcinomas at ages of 9 to 30 weeks. When IL-17 signaling was blocked by knockout IL-17 receptor C (IL-17RC) in the PTEN-null mice, the number and size of prostate tumors were reduced compared to mice that expressed IL-17RC, because IL-17RC knockout reduced cellular proliferation, increased apoptosis, inhibited inflammatory infiltration, and diminished expression of matrix metalloproteinase 7 in the mouse prostates. For details, see article by Zhang and colleagues on page 2589 of this issue.
