Fra-1 Promotes Breast Cancer Chemosensitivity by Driving Cancer Stem Cells from Dormancy

Distinct Transcriptional Programs Mediated by the Ligand-Dependent Full-Length Androgen Receptor and Its Splice Variants in Castration-Resistant Prostate Cancer

Kidney Tumor Biomarkers Revealed by Simultaneous Multiple Matrix Metabolomics Analysis

Transcriptional Signatures of Ral GTPase Are Associated with Aggressive Clinicopathologic Characteristics in Human Cancer
Ultrasensitive Measurement of Hotspot Mutations in Tumor DNA in Blood Using Error-Suppressed Multiplexed Deep Sequencing
Précis: NextGen sequencing can be used to measure minute amounts of tumor-derived DNA in the blood, providing a tool to evaluate the diagnostic utility of circulating tumor DNA as a cancer biomarker.

CellMiner: A Web-Based Suite of Genomic and Pharmacologic Tools to Explore Transcript and Drug Patterns in the NCI-60 Cell Line Set
William C. Reinhold, Margot Sunshine, Hongfang Liu, Sudhir Varma, Kurt W. Kohn, Joel Morris, James Doroshow, and Yves Pommier
Précis: This report describes a readily accessible Web-based application that opens for in silico discovery a huge NCI database built around genomic, epigenomic, and pharmacologic analyses of the NCI-60, a collection of 60 widely studied human cancer cell lines.

Deletion of the Endothelial Bmx Tyrosine Kinase Decreases Tumor Angiogenesis and Growth
Tanja Holopainen, Vanessa López-Alpuche, Wei Zheng, Rita Heljasvaara, Dennis Jones, Yun He, Denis Tvorogov, Gabriela D’Amico, Zoitlan Wiener, Leif C. Andersson, Taina Pihlajaniemi, Wang Min, and Kari Alitalo
Précis: Findings offer preclinical support for therapeutic targeting of an arterial endothelial non–receptor tyrosine kinase as a novel antiangiogenic strategy for cancer treatment.

Fibroblast-Derived Dermal Matrix Drives Development of Aggressive Cutaneous Squamous Cell Carcinoma in Patients with Recessive Dystrophic Epidermolysis Bullosa
Yi-Zhen Ng, Celine Pournier, Julio C. Salas-Alanis, Jadzani H.S. Dayal, Rodrigo Cepeda-Valdes, Wenfei Yan, Sheila Wright, Mei Chen, Jo-David Fine, Fiona J. Hogg, John A. McGrath, Dedee F. Murrell, Irene M. Leigh, E. Birgit Lane, and Andrew P. South
Précis: The collagen composition of the extracellular matrix in skin is found to be a pivotal determinant of tumor formation in individuals with a genetic skin disease, who are prone to develop aggressive squamous carcinomas.

The Vitamin E Analogue α-TEA Stimulates Tumor Autophagy and Enhances Antigen Cross-Presentation
Yuhuan Li, Tobias Hahn, Kendra Garrison, Zhi-Hua Cui, Andrew Thorburn, Jacqueline Thorburn, Hong-Ming Hu, and Emmanuel T. Akporiaye
Précis: Findings suggest a generalized method to improve antitumor immunity with the use of a vitamin E derivative as a supplement to cancer immunotherapy.

CXCR6 Uregulation Contributes to a Proinflammatory Tumor Microenvironment That Drives Metastasis and Poor Patient Outcomes in Hepatocellular Carcinoma
Qiang Gao, Ying-Jun Zhao, Xiao-Ying Wang, Shuang-Jian Qiu, Ying-Hong Shi, Jian Sun, Yong Yi, Ji-Yi Shi, Guo-Ming Shi, Zhen-Bin Ding, Yong-Sheng Xiao, Zhong-Hua Zhao, Jian Zhou, Xiang Huo, and Jia Fan
Précis: This important study defines a pivotal chemokine regulator of inflammation in the microenvironment of human liver tumors, the blockade of which might limit invasion and metastasis and improve therapeutic outcomes.

The T-cell Receptor Repertoire of Tumor-Infiltrating Regulatory T Lymphocytes Is Skewed Toward Public Sequences
Alexander Sainz-Perez, Annick Lim, Brigitte Lemercier, and Claude Leclerc
Précis: This deep-sequencing analysis offers insights into how T-regulatory cells expand within the tumor microenvironment, where they blunt immunosurveillance during malignant progression, by suggesting the dominance of a relatively small number of T-cell clones.

IL-10 Directly Activates and Expands Tumor-Resident CD8+ T Cells without De Novo Infiltration from Secondary Lymphoid Organs
Jan Emmerich, John B. Mumm, Ivan H. Chan, Drake LaFace, Hoa Truong, Terrill McClanahan, Daniel M. Gorman, and Martin Oft
Précis: In the absence of systemic immune activation or any contribution from lymphoid organs, IL-10 can uniquely activate and expand cytotoxic T cells within the tumor, where it may offer an immunotherapeutic option, challenging prevailing views of IL-10 as a tumor-supportive function.
Cancer Angiogenesis Induced by Kaposi Sarcoma–Associated Herpesvirus Is Mediated by EZH2
Meilan He, Wei Zhang, Thomas Bakken, Melissa Schutten, Zsolt Toth, Jae U. Jung, Parkash Gill, Mark Cannon, and Shou-Jiang Gao

Precis: By revealing how an oncogenic herpesvirus associated with an HIV-related skin tumor promotes tumor angiogenesis, this study suggests novel insights into the mechanisms of oncogenesis and novel strategies for antiangiogenic treatment.

ZNF217 Is a Marker of Poor Prognosis in Breast Cancer That Drives Epithelial–Mesenchymal Transition and Invasion

Precis: A relatively uncharacterized zinc finger protein is shown to act as a prognostic biomarker in breast cancer, most likely through upregulation of epithelial-mesenchymal transition and promotion of metastases.

Wnt/Snail Signaling Regulates Cytochrome c Oxidase and Glucose Metabolism
Su Yeon Lee, Hyun Min Jeon, Min Kyung Ju, Cho Hee Kim, Gyesoon Yoon, Song Hy Han, Hye Gyeong Park, and Ho Sung Kang

Precis: This study describes a novel function of the Wnt/Snail signaling pathway in the regulation of mitochondrial respiration and glycolytic switch that contributes to tumor progression.

miRNA-708 Control of CD44+ Prostate Cancer–Initiating Cells
Sharanjot Saini, Shahana Majid, Varahram Shahryari, Sumit Arora, Soichiro Yamamura, Inik Chang, Mohd Saif Zaman, Guoren Deng, Yuichiro Tanaka, and Rajvir Dahiya

Precis: Findings identify a functional role for miR-708 in regulating the cancer stem-like cell marker CD44, with potentially important implications for understanding the progression and prognosis of many human cancers in which CD44+ stem-like cells have been implicated.

miR-103/107 Promote Metastasis of Colorectal Cancer by Targeting the Metastasis Suppressors DAPK and KLF4
Hsin-Yi Chen, Yu-Min Lin, Hsiang-Ching Chung, Yaw-Dong Lang, Ching-Jung Lin, John Huang, Wei-Chi Wang, Feng-Mao Lin, Zhen Chen, Hsien-Da Huang, John Y.-J. Shyy, Jin-Tung Liang, and Ruey-Hwa Chen

Precis: This study defines the mechanisms through which a microRNA functions in potentiating multiple steps in metastasis in the colon, establishing a broad impact on this process and implicating it as a potential therapeutic target.

Histone Deacetylase Inhibitors Influence Chemotherapy Transport by Modulating Expression and Trafficking of a Common Polymorphic Variant of the ABCG2 Efflux Transporter
Agnes Basseville, Akina Tamaki, Caterina Ierano, Shana Trostel, Yvona Ward, Robert W. Robey, Ramanujan S. Hegde, and Susan E. Bates

Precis: This study of HDAC inhibitors suggests a widely applicable use for the first of this recently approved new class of drugs in improving the pharmacokinetics of cancer chemotherapeutics, with immediate implications for clinical testing.

Temporary Disruption of the Blood–Brain Barrier by Use of Ultrasound and Microbubbles: Safety and Efficacy Evaluation in Rhesus Macaques
Nathan McDannold, Costas D. Arvanitis, Natalia Vykhodtseva, and Margaret S. Livingstone

Precis: This work describes a noninvasive method to safely enable drug delivery to brain tumors and other CNS diseases, addressing a major clinical challenge for development of targeted therapies in these settings.

CD27 Signaling Increases the Frequency of Regulatory T Cells and Promotes Tumor Growth
Christina Claus, Carsten Riether, Christian Schirch, Matthias S. Matter, Tamara Hilmenyuk, and Adrian F. Ochsenbein

Precis: Findings reveal how a TNF receptor superfAMILY member mediates tumor-promoting effects of the adaptive immune system, with implications for new immunotherapeutic strategies to target this receptor.
Proline Oxidase Promotes Tumor Cell Survival in Hypoxic Tumor Microenvironments
Wei Liu, Kristine Glunde, Zaver M. Bhujwalla, Venu Raman, Anit Sharma, and James M. Phang
Précis: The induction of proline oxidase and proline catabolism under oxygen and/or glucose deprivation contributes to tumor cell survival, thereby providing a better understanding of tumor metabolic reprogramming beyond the Warburg Effect.

Accumulation of Multipotent Progenitors with a Basal Differentiation Bias during Aging of Human Mammary Epithelia
James C. Garbe, Francois Pepin, Fanny A. Pelissier, Klara Sputova, Agla J. Fridriksdottir, Diana E. Guo, Rene Villadsen, Morag Park, Ole W. Petersen, Alexander D. Borowsky, Martha R. Stampfer, and Mark A. LaBarge
Précis: Although most preclinical research in cancer is conducted in young animal models, aging is the most important risk factor for human cancer, and elucidation of changes that occur in the tissue microenvironment during aging will lead to fundamental new insights yet to emerge.

GLI1 Modulates EMT in Pancreatic Cancer—Letter
Shingo Inaguma, Kenji Kasai, Mitsuyoshi Hashimoto, and Hiroshi Ikeda

GLI1 Modulates EMT in Pancreatic Cancer—Response

ABOUT THE COVER
Rescue of a common ABCG2 variant by the HDAC inhibitor romidepsin. While the drug efflux transporter ABCG2 is expressed at the cell surface in transfected Flp-In-293 cells, its Q141K variant is trapped in the aggresome, an intracellular structure where misfolded proteins accumulate. Flp-In-293 cells expressing the Q141K variant were treated with romidepsin for 24 h, after which, immunofluorescence staining was done for ABCG2 (red), the aggresome marker γ-tubulin (green), and nuclei (blue). Romidepsin induced a drastic change in variant protein localization, from aggresome to the cell surface. This was accompanied by an increase in expression and a restoration of ABCG2-mediated drug efflux activity. For details, see article by Basseville and colleagues on page 3642 of this issue.
