Integrin α5β1 Plays a Critical Role in Resistance to Temozolomide by Interfering with the p53 Pathway in High-Grade Glioma

Précis: Findings offer preclinical proof-of-concept for targeting α5β1 integrin to improve the eradication of high-grade glioma expressing a functional p53 protein.

Précis: Findings advance understanding of the clinical significance of Ral GTPases in human cancer, with specific attention to how they can be used to predict outcomes in various tumor types and to aid in the development of Ral-targeted therapies.

Cancer Angiogenesis Induced by Kaposi Sarcoma–Associated Herpesvirus Is Mediated by EZH2
Meilan He, Wei Zhang, Thomas Bakken, Melissa Schutten, Zsolt Toth, Jae U. Jung, Parkash Gill, Mark Cannon, and Shou-Jiang Gao

Precis: By revealing how an oncogenic herpesvirus associated with an HIV-related skin tumor promotes tumor angiogenesis, this study suggests novel insights into the mechanisms of oncogenesis and novel strategies for antiangiogenic treatment.

ZNF217 Is a Marker of Poor Prognosis in Breast Cancer That Drives Epithelial–Mesenchymal Transition and Invasion

Precis: A relatively uncharacterized zinc finger protein is shown to act as a prognostic biomarker in breast cancer, most likely through upregulation of epithelial–mesenchymal transition and promotion of metastases.

Wnt/Snail Signaling Regulates Cytochrome c Oxidase and Glucose Metabolism
Su Yeon Lee, Hyun Min Jeon, Min Kyung Ju, Cho Hee Kim, Gyesoon Yoon, Song Iy Han, Hye Gyeong Park, and Ho Sung Kang

Precis: This study describes a novel function of the Wnt/Snail signaling pathway in the regulation of mitochondrial respiration and glycolytic switch that contributes to tumor progression.

miRNA-708 Control of CD44+ Prostate Cancer–Initiating Cells
Sharanjot Saini, Shahana Majid, Varahram Shahyari, Sumit Arora, Soichiro Yamamura, Inik Chang, Mohd Saif Zaman, Guoren Deng, Yuichiro Tanaka, and Rajvir Dahiya

Precis: Findings identify a functional role for miR-708 in regulating the cancer stem-like cell marker CD44, with potentially important implications for understanding the progression and prognosis of many human cancers in which CD44+ stem-like cells have been implicated.

miR-103/107 Promote Metastasis of Colorectal Cancer by Targeting the Metastasis Suppressors DAPK and KLF4
Hsin-Yi Chen, Yu-Min Lin, Hsiang-Ching Chung, Yaw-Dong Lang, Ching-Jung Lin, John Huang, Wei-Chi Wang, Feng-Mao Lin, Zhen Chen, Hsien-Da Huang, John Y.-J. Shyy, Jin-Tung Liang, and Ruey-Hwa Chen

Precis: This study defines the mechanisms through which a microRNA functions in potentiating multiple steps in metastasis in the colon, establishing a broad impact on this process and implicating it as a potential therapeutic target.

Histone Deacetylase Inhibitors Influence Chemotherapy Transport by Modulating Expression and Trafficking of a Common Polymorphic Variant of the ABCG2 Efflux Transporter
Agnes Basseville, Akina Tamaki, Caterina Ierano, Shana Trostel, Yvona Ward, Robert W. Robey, Ramamoorthy S. Hegde, and Susan E. Bates

Precis: This study of HDAC inhibitors suggests a widely applicable use for the first of this recently approved new class of drugs in improving the pharmacokinetics of cancer chemotherapeutics, with immediate implications for clinical testing.

Temporary Disruption of the Blood–Brain Barrier by Use of Ultrasound and Microbubbles: Safety and Efficacy Evaluation in Rhesus Macaques
Nathan McDannold, Costas D. Arvanitis, Natalia Vykhodtseva, and Margaret S. Livingstone

Precis: This work describes a noninvasive method to safely enable drug delivery to brain tumors and other CNS diseases, addressing a major clinical challenge for development of targeted therapies in these settings.

CD27 Signaling Increases the Frequency of Regulatory T Cells and Promotes Tumor Growth
Christina Claus, Carsten Rieither, Christian Schürch, Matthias S. Matter, Tamara Hillmenyuk, and Adrian F. Ochsenbein

Precis: Findings reveal how a TNF receptor superfamily member mediates tumor-promoting effects of the adaptive immune system, with implications for new immunotherapeutic strategies to target this receptor.

GLI1 Modulates EMT in Pancreatic Cancer—Response

ABOUT THE COVER

Rescue of a common ABCG2 variant by the HDAC inhibitor romidepsin. While the drug efflux transporter ABCG2 is expressed at the cell surface in transfected Flp-In-293 cells, its Q141K variant is trapped in the aggresome, an intracellular structure where misfolded proteins accumulate. Flp-In-293 cells expressing the Q141K variant were treated with romidepsin for 24 h, after which, immunofluorescence staining was done for ABCG2 (red), the aggresome marker γ-tubulin (green), and nuclei (blue). Romidepsin induced a drastic change in variant protein localization, from aggresome to the cell surface. This was accompanied by an increase in expression and a restoration of ABCG2-mediated drug efflux activity. For details, see article by Basseville and colleagues on page 3642 of this issue.
