**Trifunctional Bispecific Antibodies Induce Tumor-Specific T Cells and Elicit a Vaccination Effect**

Nina Eissler, Peter Ruf, Josef Mysliwietz, Horst Lindhofer, and Ralph Mockait

**Precise:** T-cell-activating signals that can be triggered by trifunctional bispecific antibodies make them superior for eliminating tumor cells due to their ability to induce polyvalent protective T-cell responses against tumor-derived peptides.

---

**Immunogenic Tumor Cell Death Induced by Chemoradiotherapy in Patients with Esophageal Squamous Cell Carcinoma**

Yoshiyuki Suzuki, Kousaku Mimura, Yuya Yoshimoto, Mitsuaki Watanabe, Yu Ohkubo, Shinichirou Iwasa, Kazutoshi Murata, Hideki Fujii, Takashii Nakano, and Koji Kono

**Precise:** Findings demonstrate that chemoradiation induces tumor-antigen specific T-cell responses in patients with esophageal squamous cell carcinoma, providing proof-of-principle for immunogenic cell death.

---

**The Proinflammatory Myeloid Cell Receptor TREM-1 Controls Kupffer Cell Activation and Development of Hepatocellular Carcinoma**

Juan Wu, Jiaqi Li, Rosalba Salcedo, Nahid F. Mivechi, Giorgio Trinchieri, and Anatolij Horuzsko

**Precise:** Findings reveal a pivotal mediator of chronic inflammatory processes in a myeloid-like cell type of the liver that underpins the development and progression of liver cancer.

---

**Opposing Roles for IL-23 and IL-12 in Maintaining Occult Cancer in an Equilibrium State**

Michele W. L. Teng, Matthew D. Vesely, Helene Duret, Nicole McLaughlin, Jennifer E. Towne, Robert D. Schreiber, and Mark J. Smyth

**Precise:** Findings illustrate opposing roles for the important cytokines IL-23 and IL-12 in determining the outgrowth versus dormancy of occult neoplasia, implying long-term cancer risks of using IL-12/23p40 antibodies for clinical treatment of autoimmune disorders.

---

**Neogenesis of Lymphoid Structures and Antibody Responses Occur in Human Melanoma Metastases**

Arcadio Cipponi, Marjorie Mercier, Teollia Seremet, Jean-François Baurain, Ivan Thiéte, Joost van den Oord, Marguerite Stas, Thierry Boon, Pierre G. Coulié, and Nicolas van Baren

**Precise:** Striking findings show the ectopic development of functional lymphoid structures within melanoma metastases, suggesting that tumors not only directly tolerizing adaptive immune responses in draining lymph nodes but also do so directly within the tumor microenvironment itself.

---

**Cervical Cancers Require the Continuous Expression of the Human Papillomavirus Type 16 E7 Oncoprotein Even in the Presence of the Viral E6 Oncoprotein**

Sean F. Jabbar, Soyeong Park, Johannes Schweizer, Marthe Berard-Bergery, Henry C. Pitot, Denis Lee, and Paul F. Lambert

**Precise:** This study demonstrates that cervical cancer progression depends on continuous expression of human papillomavirus E7 oncoprotein, suggesting that it is a legitimate target for treatment and prevention of cervical cancer.

---

**A Zebrafish Model to Study and Therapeutically Manipulate Hypoxia Signaling in Tumorigenesis**

**Precise:** This study describes a novel zebrafish model that might speed the identification and development of strategies to blunt the effects of hypoxia-induced HIF activation, which is widely implicated in malignant progression and therapeutic resistance in solid tumors.

---

**The Retinoblastoma Gene Undergoes Rearrangements in BRCA1-Deficient Basal-like Breast Cancer**

**Precise:** Many aggressive breast cancers of the basal-like subtype that are deficient in BRCA1 also appear to be deficient in Rb tumor suppressor function, with potential therapeutic implications for the application of Cdk inhibitors in this tumor subset.

---

**MiR-96 Downregulates REV1 and RAD51 to Promote Cellular Sensitivity to Cisplatin and PARP Inhibition**

Yemin Wang, Jen-Wei Huang, Philamer Calves, Christopher J. Kemp, and Toshiyasu Taniguchi

**Precise:** Findings define the function of a microRNA in cancer cells that downregulates both a homologous recombination factor and a trans-lesion DNA synthesis polymerase, perhaps offering a generalized strategy to improve the efficacy of cytotoxic chemotherapy in advanced cancers.
Neuropilin-1 Stimulates Tumor Growth by Increasing Fibronectin Fibril Assembly in the Tumor Microenvironment
Usman Yaqoob, Sheng Cao, Uday Shergill, Kumaravelu Jagavelu, Zhimin Geng, Meng Yin, Thiago M. de Assuncao, Ying Cao, Anna Szabolcs, Snorri Thorgeirsson, Martin Schwartz, Ju Dong Yang, Richard Ehman, Lewis Roberts, Debraharta Mukhopadhyay, and Vijay H. Shah

Precis: A protein that functions as a VEGF receptor may also alter extracellular matrix assembly, with implications for how to target myofibroblasts that express it as a strategy to therapeutically reprogram the tumor microenvironment.

LRP1B Deletion in High-Grade Serous Ovarian Cancers Is Associated with Acquired Chemotherapy Resistance to Liposomal Doxorubicin
Prue A. Cowin, Joshy George, Sian Fereday, Elizabeth Loehrer, Peter Van Loo, Carleen Cullineane, Darishu Etadmoghadam, Sarah Ftouni, Laura Galletta, Michael S. Anglesio, Joy Hendley, Leanne Bowes, Karen E. Sheppard, Elizabeth L. Christie, Australian Ovarian Cancer Study, Richard B. Pearson, Paul R. Harnett, Viola Heinzelmann-Schwarz, Michael Friedlander, Orla McNally, Michael Quinn, Peter Campbell, Anna deFazio, and David D.L. Bowtell

Precis: This extensive genomics study of patients with the most common form of ovarian cancer, which reveals the daunting extent of intratumoral heterogeneity present in different lesions from the same patient, identifies a lipid transport molecule that acts as a positive modifier of a form of acquired drug resistance that occurs commonly in patients with relapsed disease.

Alternate Splicing of the p53 Inhibitor HDMX Offers a Superior Prognostic Biomarker than p53 Mutation in Human Cancer

Precis: Findings advance understanding of p53 control and suggest a broadly useful biomarker to personalize therapeutic interventions in treatment of many types of human cancer.

NAC1 Is an Actin-Binding Protein That Is Essential for Effective Cytokinesis in Cancer Cells
Kai Lee Yap, Stephanie I. Fraley, Michelle M. Thiaville, Natini Jinawath, Kentaro Nakayama, Jianlong Wang, Tian-Li Wang, Denis Wirtz, and Le-Ming Shih

Precis: This study reveals an actin-binding function for a protein previously implicated in transcriptional regulation, perhaps providing a novel foundation to develop unique actin-targeting agents as a generalized strategy for cancer therapy.

Caveolin-1 Increases Aerobic Glycolysis in Colorectal Cancers by Stimulating HMGA1-Mediated GLUT3 Transcription
Tae-Kyu Ha, Nam-Gu Her, Min-Goo Lee, Byung-Kyu Ryu, Jin-Hee Lee, Jikhyon Han, Seong-In Jeong, Min-Ju Kang, Nam-Hoon Kim, Hyo-Jong Kim, and Sung-Gil Chi

Precis: Findings suggest how a key regulator of lipid raft formation acts to promote aerobic glycolysis in colon cancer cells, providing a mechanistic basis to understanding its oncogenic function in certain human cancers.

Critical Function for Nuclear Envelope Protein TMEM209 in Human Pulmonary Carcinogenesis
Takashi Fujitomo, Yataro Daigo, Koichi Matsuda, Koji Ueda, and Yusuke Nakamura

Precis: Findings identify a critical role for a tissue-selective nuclear envelope protein in lung cancer, which by promoting c-Myc expression may offer a novel disease-selective therapeutic target in this setting.

Resistance of Glioblastoma-Initiating Cells to Radiation Mediated by the Tumor Microenvironment Can Be Abolished by Inhibiting Transforming Growth Factor-β
Matthew E. Hardee, Ariel E. Marciscano, Christina M. Medina-Ramirez, David Zagzag, Ashwatha Narayana, Scott M. Lomning, and Mary Helen Barcellos-Hoff

Precis: This study offers immediate translational impact by suggesting that TGF-β inhibitors under study might be applied combinatorially to heighten the responsiveness of glioblastoma to radiotherapy, which is used widely as a standard of care for treatment but with limited efficacy.

MLK3 Regulates Paxillin Phosphorylation in Chemokine-Mediated Breast Cancer Cell Migration and Invasion to Drive Metastasis
Jian Chen and Kathleen A. Gallo

Precis: Important mechanistic findings suggest a potentially important new therapeutic target in metastatic breast cancer.
### THERAPEUTICS, TARGETS, AND CHEMICAL BIOLOGY

**Précis:** This study describes novel murine models of metastatic ovarian cancer that histologically resemble their human counterparts, offering useful tools for pathobiologic and preclinical therapeutic studies.

**Précis:** This study offers a broadly applicable tool to visualize tumor-associated macrophages, which are of great importance in the tumor microenvironment to malignant progression and therapeutic response.

**Précis:** Results offer preclinical validation of a highly effective new inhibitor of the P-glycoprotein that is widely responsible for acquired clinical resistance to cytotoxic chemotherapy, with significant therapeutic promise for treating many types of multidrug-resistant malignancies.

**Précis:** This study shows how to extend the applications of arsenic trioxide for improving treatment of many types of leukemia.
CDK Inhibitors Upregulate BH3-Only Proteins to Sensitize Human Myeloma Cells to BH3 Mimetic Therapies
Shuang Chen, Yun Dai, Xin-Yan Pei, Jennifer Myers, Li Wang, Lora B. Kramer, Mandy Garnett, Daniella M. Schwartz, Florence Su, Gary L. Simmons, Justin D. Richey, Dustin G. Larsen, Paul Dent, Robert Z. Orłowski, and Steven Grant

Précis: This study offers preclinical proof-of-concept for a therapeutic combination of pan-CDK inhibitors with pan-BH3 mimetics in patients with refractory hematologic malignancies.

TUMOR AND STEM CELL BIOLOGY

Bone-Derived IGF Mediates Crosstalk between Bone and Breast Cancer Cells in Bony Metastases
Toru Hiraga, Akira Myoui, Nobuyuki Hashimoto, Akira Sasaki, Kenji Hata, Yoshihiro Morita, Hideki Yoshikawa, Clifford J. Rosen, Gregory R. Mundy, and Toshiyuki Yoneda

Précis: This study offers new insights into the little understood process of bone metastasis by breast cancers, with implications for the application of IGF antagonists to arrest this debilitating and deadly pathway of cancer progression.

TRPM7 Is Required for Breast Tumor Cell Metastasis

Précis: Findings implicate a calcium channel that is overexpressed in breast cancer cells as a critical mediator of metastasis, with implications for developing more effective antimetastatic drugs.

Dysfunction of Nucleus Accumbens-1 Activates Cellular Senescence and Inhibits Tumor Cell Proliferation and Oncogenesis
Yi Zhang, Yan Cheng, Xingcong Ren, Tsukasa Hori, Kathryn J. Huber-Keener, Li Zhang, Kai Lee Yap, David Liu, Lisa Shantz, Zheng-Hong Qin, Suping Zhang, Jianrong Wang, Hong-Gang Wang, Ie-Ming Shih, and Jin-Ming Yang

Précis: This study offers new insights into mechanisms of senescence and how its bypass is important for tumor development and progression.

BMP4 Administration Induces Differentiation of CD133+ Hepatic Cancer Stem Cells, Blocking Their Contributions to Hepatocellular Carcinoma
Lixing Zhang, Hefen Sun, Fangyu Zhao, Ping Lu, Chao Ge, Hong Li, Helei Hou, Mingxia Yan, Taoyang Chen, Guoping Jiang, Haiyang Xie, Ying Cui, Xiaowu Huang, Jia Fan, Ming Yao, and Jinjun Li

Précis: High-dose treatment with a TGF-β-related growth factor can block the contribution of liver cancer stem cells to malignant development and chemoresistance, perhaps offering a broad-spectrum therapeutic strategy in this disease.

CORRECTION

Correction: Scaling Laws for Plasma Concentrations and Tolerable Doses of Anticancer Drugs

Downloaded from cancerres.aacrjournals.org on January 22, 2018. © 2012 American Association for Cancer Research.
ABOUT THE COVER

Because of the torturous vasculature of solid tumors and the diffusion limitations of oxygen, cancer cells routinely encounter hypoxic conditions. Immunohistochemistry of pimonidazole hydrochloride, a nitroimidazole with hypoxic selectivity, identifies a ring of cells (brown) that define the hypoxic border between well-oxygenated and necrotic tissue. Cancer cells depend on glycolysis to meet energetic demands when deprived of oxygen; as a result, these hypoxic regions are expected to be acidic. In response to acidic environments, cells exhibit chronic elevated autophagic activity, a phenotype that is partially reversible in vivo following buffer therapy with sodium bicarbonate. For details, see article by Wojtkowiak and colleagues on page 3938.
