Ink4a/Arf Inactivation with Activation of the NF-κB/IL-6 Pathway Is Sufficient to Drive the Development and Growth of Angiosarcoma
Jinming Yang, Sara Kantrow, Jiqing Sai, Oriana E. Hawkins, Mark Boothby, Gregory D. Ayers, Eric D. Young, Elizabeth G. Demicco, Alexander J. Lazar, Dina Lev, and Ann Richmond

Precis: Results offer clinical implications for targeting the NF-κB/IL-6/STAT3 pathway to treat angiosarcoma, a rare but aggressive cancer of endothelial or lymph vessel cells that is poorly understood.

Ectopic ATP Synthase Blockade Suppresses Lung Adenocarcinoma Growth by Activating the Unfolded Protein Response
Hsin-Yi Chang, Hsuan-Cheng Huang, Tsui-Chin Huang, Pan-Chyr Yang, Yi-Ching Wang, and Hsueh-Fen Juan

Precis: Findings elucidate a feature of mitochondrial ATP synthase expressed at the plasma membrane in lung cancer cells that might be exploited therapeutically.

MicroRNA-21 Modulates the Levels of Reactive Oxygen Species by Targeting SOD3 and TNFα
Xiangming Zhang, Wooi-Loon Ng, Ping Wang, Lin-In Tian, Erica Werner, Huichen Wang, Paul Doetsch, and Ya Wang

Precis: An oncogenic microRNA thought to promote cancer mainly by affecting expression of growth regulatory genes may actually do so by regulating genes that promote reactive oxygen species formation, a root driver of carcinogenesis.

Truncated DNMT3B Isoform DNMT3B7 Suppresses Growth, Induces Differentiation, and Alters DNA Methylation in Human Neuroblastoma
Kelly R. Ostler, Qiwri Yang, Timothy J. Looney, Li Zhang, Aparna Vasanthakumar, Yufeng Tian, Mashu Kocherginsky, Stacey L. Raimondi, Jessica G. DeMaio, Helen R. Salwen, Song Gu, Alexandre Chlenski, Arlene Naranjo, Amy Gill, Radhika Peddinti, Bruce T. Lahn, Susan L. Cohn, and Lucy A. Godley

Precis: This study provides insights into the mechanistic basis for epigenetic changes in neuroblastoma, acting at the level of DNA methylation, with the potential to leverage treatments that use all-trans retinoic acid in this disease.

Unphosphorylated STAT1 Promotes Sarcoma Development through Repressing Expression of Fas and Bad and Conferring Apoptotic Resistance

Precis: Findings provide a molecular mechanism to explain the opposing functions between phosphorylated and unphosphorylated STAT1 in the control of the development of aggressive soft-tissue tumors.

Markers of B-Cell Activation in Relation to Risk of Non-Hodgkin Lymphoma
Anneciaire J. De Roos, Dana K. Mirick, Kerstin J. Edlefsen, Andrea Z. LaCroix, Kenneth J. Kopecsky, Margaret M. Madeleine, Larry Maggantay, and Otoniel Martinez-Maza

Precis: Evidence from a study of postmenopausal women suggests that B-cell activation plays a prominent role in the pathogenesis of non-Hodgkin lymphomas, pointing toward avenues for development of early diagnostic tests for this disease.

Hematologic β-Tubulin VI Isoform Exhibits Genetic Variability That Influences Paclitaxel Toxicity
Luis J. Leandro-García, Susanna Leskelä, Lucía Inglada-Pérez, Íñigo Landa, Aguirre A. de Cubas, Agnieszka Maliszewska, Íñaki Comino-Méndez, Rocío Letón, Álvaro Gómez-Graña, Raúl Torres, Juan Carlos Ramírez, Sara Álvarez, José Rivera, Constantino Martínez, María Luisa Lozano, Alberto Cascón, Mercedes Robledo, and Cristina Rodríguez-Antona

Precis: A genetic variation found in a tubulin isoform expressed only in hematopoietic cells may explain the patient variation in myelosuppression that occurs after treatment with microtubule binding drugs.

Systemic Combination Virotherapy for Melanoma with Tumor Antigen-Expressing Vesicular Stomatitis Virus and Adoptive T-Cell Transfer
Diana M. Rommelfanger, Phonphimon Wongthida, Rosa M. Diaz, Karen M. Kahuza, Jill M. Thompson, Timothy J. Kottke, and Richard G. Vile

Precis: Combining adoptive T-cell therapy with the immune stimulating benefits of oncolytic virotherapy might generate a truly systemic protocol for treatment of metastatic cancers without the need of direct access to the tumor.
B-Raf Activation Cooperates with PTEN Loss to Drive c-Myc Expression in Advanced Prostate Cancer
Jingqiang Wang, Takashi Kobayashi, Nicolas Floc’h, Carolyn Waugh Kinkade, Alvaro Aytes, David Dankort, Celine Lefebvre, Antonina Mitrofanova, Robert D. Cardiff, Martin McMahon, Andrea Califano, Michael M. Shen, and Cory Abate-Shen

Precis: This study describing a novel model of advanced castration-resistant prostate cancers suggests a generalized approach to target Myc activation, a long-standing goal in cancer research, by combining inhibitors of the PI3K/Akt/mTOR and MAPK signaling pathways.

Effective Photothermal Chemotherapy Using Doxorubicin-Loaded Gold Nanospheres that Target EphB4 Receptors in Tumors
Jian You, Rui Zhang, Chiyi Xiong, Meng Zhong, Maritess Melancon, Sanjay Gupta, Alpa M. Nick, Anil K. Sood, and Chun Li

Precis: A single nanodevice that targets tumor cells with both chemotherapy and phototherapy attacks is shown to exert a synergistic antitumor effect without increased toxicity in a preclinical mouse model.

Oxidation-Mediated DNA Cross-Linking Contributes to the Toxicity of 6-Thioguanine in Human Cells
Reto Brem and Peter Karran

Precis: Two key contributors to the cytotoxicity of anticancer and immunosuppressant thiopurine drugs are their incorporation into DNA and their ability to increase levels of reactive oxygen species.

HER2 Overexpression Renders Human Breast Cancers Sensitive to PARP Inhibition Independently of Any Defect in Homologous Recombination DNA Repair
Somaira Nowshreen, Tiffany Cooper, James A. Bonner, Albert F. LoBuglio, and Eddy S. Yang

Precis: Findings may broaden clinical applications for PARP inhibitors in treating HER2+ breast cancers, many of which ultimately become resistant to HER2 antibody therapies used widely in the clinic.

CCN6 Modulates BMP Signaling via the Smad-Independent TAK1/p38 Pathway, Acting to Suppress Metastasis of Breast Cancer
Anupama Pal, Wei Huang, Xin Li, Kathy A. Toy, Zaneta Nikolovska-Coleska, and Celina G. Kleer

Precis: Findings identify a novel modifier pathway through which the extracellular matrix protein CCN6 limits the effects of the TGF-β signaling axis on breast cancer invasion and metastasis.

PCA-1/ALKBH3 Contributes to Pancreatic Cancer by Supporting Apoptotic Resistance and Angiogenesis
Ichiro Yamato, Masayuki Sho, Keiji Shimada, Kiyohiko Hotta, Yuko Ueda, Satoshi Yasuda, Naoko Shigi, Noboru Konishi, Kazutake Tsujikawa, and Yoshiyuki Nakajima

Precis: Findings suggest functional insights for a little-studies DNA repair gene in the pathophysiology of pancreatic cancer, with possible impacts on progression and therapeutic management.

TGF-β and αvβ6 Integrin Act in a Common Pathway to Suppress Pancreatic Cancer Progression
Aram F. Hezel, Vikram Deshpande, Stephanie M. Zimmermann, Gianmarco Contino, Brinda Alagesan, Michael R. O’Dell, Lee B. Rivera, Jay Harper, Scott Lonning, Rolf A. Brekken, and Nabeel Bardeesy

Precis: Findings from this preclinical study provide support for the argument that blocking the TGF-β pathway may actually accelerate disease progression, challenging concepts about the potential benefit of such an approach in cancer patients.

The Antioxidant Tempol Reduces Carcinogenesis and Enhances Survival in Mice When Administered after Nonlethal Total Body Radiation
James B. Mitchell, Miriam R. Anver, Anastasia L. Sowers, Philip S. Rosenberg, Maria Figueroa, Angela Thetford, Murali C. Krishna, Paul S. Albert, and John A. Cook

Precis: Findings prompt human studies of an antioxidant compound that can limit radiation-induced secondary malignancies after radiation therapy, and that may reduce the risks of cancer in individuals exposed to nonlethal radiation as a result of nuclear accidents or attacks.
Candidate Pathways for Promoting Differentiation or Quiescence of Oligodendrocyte Progenitor-like Cells in Glioma
Joseph D. Dougherty, Elena I. Fomchenko, Afua A. Akuffo, Eric Schmidt, Karim Y. Helmy, Elena Bazzoli, Cameron W. Brennan, Eric C. Holland, and Ana Milosevic

Précis: Translational profiling of mouse and human glioblastomas identified several candidate pathways that promote quiescence or differentiation rather than proliferation in these tumors, suggesting new therapeutic targets for combination treatment.

Correction: Deletion of the Endothelial Bmx Tyrosine Kinase Decreases Tumor Angiogenesis and Growth

Correction: Prognostic PET $^{18}$F-FDG Uptake Imaging Features Are Associated with Major Oncogenomic Alterations in Patients with Resected Non–Small Cell Lung Cancer

ABOUT THE COVER
Complete tumor eradication by thermal ablation therapy alone is often difficult because of sub-lethal thermal dose in some areas of the tumor. For photothermal ablation therapy, it is highly desirable to selectively deliver combined thermal ablation therapy and other treatment modalities such as chemotherapy through a single nanodevice. Using doxorubicin-loaded hollow gold nanospheres conjugated with a high-affinity cyclic peptide recognizing EphB4 receptors, it was found that targeted nanoparticles displayed significantly higher tumor uptakes than nanoparticles without peptidyl homing ligands. Moreover, treatment with near-infrared laser led to synergistic antitumor effect without increased toxicities in a preclinical mouse model. For details, see article by You and colleagues on page 4777.
