## Breaking Advances

### Highlights from Recent Cancer Literature

## Point-Counterpoint Reviews

### RECIST: No Longer the Sharpest Tool in the Oncology Clinical Trials Toolbox—Point

Manish R. Sharma, Michael L. Maitland, and Mark J. Ratain

*See Counterpoint and Reply by Fojo and Noonan, p. 5151 and p. 5150*

### RECIST: No Longer the Sharpest Tool in the Oncology Clinical Trials Toolbox—Reply to Point

Antonio T. Fojo and Anne Noonan

*See Point by Sharma et al., p. 5145*

### Why RECIST Works and Why It Should Stay—Counterpoint

Antonio T. Fojo and Anne Noonan

*See Point and Reply by Sharma et al., p. 5145 and p. 5158*

### Why RECIST Works and Why It Should Stay—Reply to Counterpoint

Manish R. Sharma, Michael L. Maitland, and Mark J. Ratain

*See Counterpoint by Fojo and Noonan, p. 5151*

## Meeting Report

### Changing the Tumor Microenvironment: New Strategies for Immunotherapy

Pedro Berraondo, Viktor Umansky, and Ignacio Melero

## Priority Reports

### RALBP1/RLIP76 Depletion in Mice Suppresses Tumor Growth by Inhibiting Tumor Neovascularization

Seunghyung Lee, Jeremy G. T. Wurtzel, Sharad S. Singhal, Sanjay Awasthi, and Lawrence E. Goldfinger

*Précis: A widely expressed multifunctional protein that binds to Ral and R-Ras small GTPases is essential to support the blood vasculature in tumors, supporting its candidacy as a generalized anticancer target.*

### Autologous Ectopic Grafting of Cryopreserved Testicular Tissue Preserves the Fertility of Prepubescent Monkeys That Receive Sterilizing Cytotoxic Therapy

Kirsti Jahnukainen, Jens Ehmeke, Mirja Nurmin, and Stefan Schlatt

*Précis: This study addresses an important survivorship issue for pediatric male cancer patients in developing a proof-of-principle for methods to allow engraftment of immature testis tissue following therapy as a strategy to reduce or eliminate risks of future infertility.*

## Integrated Systems and Technologies

### An NMR Metabolomics Approach for the Diagnosis of Leptomeningeal Carcinomatosis

Hye Rim Cho, He Wen, Young Jin Ryu, Yong Jin An, Hyo Cheol Kim, Woo Kyung Moon, Moon Hee Han, Sunghyouk Park, and Seung Hong Choi

*Précis: Preclinical proof-of-concept for metabolic typing of cerebral spinal fluid offers a tool to improve diagnostic accuracy of one of the more common types of metastatic invasion into the central nervous system, immediately prompting clinical testing of this approach.*

## Microenvironment and Immunology

### Impaired IFN-α Production by Plasmacytoid Dendritic Cells Favors Regulatory T-cell Expansion That May Contribute to Breast Cancer Progression

Vanja Sisirak, Julien Faget, Michael Gobert, Nadège Goutagny, Nelly Vey, Isabelle Treilleux, Sarah Renaudineau, Gaëlle Poyet, Sana Intidhar Labidi-Galy, Sophie Godard-Leon, Isabelle Durand, Isabelle Le Mercier, Agathe Bajard, Thomas Bachelot, Alain Puisieux, Isabelle Puisieux, Jean-Yves Blay, Christine Ménotrier-Caux, Christophe Caux, and Nathalie Bendriss-Vermare

*Précis: This study unravels the mechanistic basis for the negative impact of pDC infiltration in breast tumor and offers perspectives for new therapeutic strategies by targeting pDC to overcome immune tolerance in breast cancer.*
Stromal Progenitor Cells from Endogenous Adipose Tissue Contribute to Pericytes and Adipocytes That Populate the Tumor Microenvironment
Yan Zhang, Alexes C. Daquinag, Felipe Amaya-Manzanares, Olga Sirin, Chieh Tseng, and Mikhail G. Kolonin

Precis: This report suggests that obesity promotes cancer progression by providing a wellspring of adipose cells for tumors to recruit to their microenvironment, where they support angiogenesis and malignant outgrowth.

MOLECULAR AND CELLULAR PATHOBIOLOGY

PD-1 Blockade Enhances T-cell Migration to Tumors by Elevating IFN-γ Inducible Chemokines
Weiyi Peng, Chengwen Liu, Chunyu Xu, Yanyan Lou, Jieqing Chen, Yan Yang, Hideo Yagita, Willem W. Overwijk, Gregory Lizée, Laszlo Radvanyi, and Patrick Hwu

Precis: Blocking immune escape mechanisms mediated by the PD-1 pathway may enhance a variety of cancer therapies, including adoptive T-cell treatments that have shown promise over the years but induce durable responses in a minority of patients.

TNF-α Mediates Macrophage-Induced Bystander Effects through Netrin-1
Yonghong Yang, Xingmin Wang, Danny R. Moore, Stanley A. Lightfoot, and Mark M. Huw

Precis: Commensal intestinal infections that may program inflammation in the colon tumor microenvironment influence a neuronal pathway with emerging importance in cancer.

A Retinoic Acid–Rich Tumor Microenvironment Provides Clonal Survival Cues for Tumor-Specific CD8+ T Cells
Yanxia Guo, Karina Pino-Lagos, Cory A. Ahonen, Kathy A. Bennett, Jinhwan Wang, Joseph L. Napoli, Rame Blomhoff, Shanthini Sockanathan, Roshantha A. Chandraratna, Ethan Dmitrovsky, Mary Jo Turk, and Randolph J. Noelle

Precis: These findings reveal that tumor growth elevates retinoic acid within the tumor microenvironment and that this event is critical to maintain tumor-specific CD8+ T-cell clonal survival and to facilitate antitumor immunity, with mechanistic implications for immunovigilating.

Plasmacytoid Dendritic Cells Promote Immunosuppression in Ovarian Cancer via ICOS Costimulation of Foxp3+ T-Regulatory Cells
Curdin Conrad, Josh Gregorio, Yi-Hong Wang, Tomoki Ito, Stephan Meller, Shino Hanabuchi, Sonya Anderson, Neely Atkinson, Pedro T. Ramirez, Yong-Jun Liu, Ralph Freedman, and Michel Gillet

Precis: Findings identify a signaling pathway controlled by the T-cell coreceptor ICOS as a pivotal driver of immunosuppression in ovarian cancer.

35BP1 Is a Haploinsufficient Tumor Suppressor and Protects Cells from Radiation Response in Glioma
Massimo Squatrito, Fabio Vanoli, Nikolaus Schultz, Maria Jasins, and Eric C. Holland

Precis: These findings suggest that components of the nonhomologous end-joining system of DNA repair may be good therapeutic targets to improve treatment of aggressive brain tumors.

Clusterin Mediates TGF-β–Induced Epithelial–Mesenchymal Transition and Metastasis via Twist1 in Prostate Cancer Cells
Masaki Shiota, Anousheh Zardan, Ario Takeuchi, Masafumi Kumano, Eliana Beraldii, Seiji Naito, Amina Zoubeidi, and Martin E. Gleave

Precis: These findings identify a new link between TGF-β and the epithelial–mesenchymal transition that could be targeted to block prostate cancer metastasis.

Multilevel Whole-Genome Analysis Reveals Candidate Biomarkers in Clear Cell Renal Cell Carcinoma
Andrew H. Girgis, Vladimir V. Iakovlev, Ben Beheshti, Jane Bayani, Jeremy A. Squire, Anna Bui, Marina Mankaruos, Youssel Yousef, Bishoy Khalil, Heba Khella, Maria Pasic, and George M. Yousef

Precis: In addition to mutation and expression analyses, the analysis of gene methylation and gene-copy number as part of an integrated whole-genome analysis may provide a more comprehensive understanding of cancer heterogeneity to improve diagnosis, prognosis, and therapy.
Hypoxia-Induced Gene Expression in Chemoradioresistant Cervical Cancer Revealed by Dynamic Contrast-Enhanced MRI

Cathinka Halle, Erelend Andersen, Malin Lando, Eva-Katrine Jarnes, Grete Hasvold, Marit Holden, Randi G. Syljuasen, Kolbein Sundfør, Gunnar B. Kristensen, Ruth Holm, Eirik Malinen, and Heidi Lyng

Precise: A noninvasive imaging strategy has been found to identify patients who might benefit from hypoxic modification of chemoradiotherapy in cervical cancers.

Protein Tyrosine Phosphatase Shp2 (Ptpn11) Plays an Important Role in Maintenance of Chromosome Stability

Xia Liu, Hong Zheng, and Cheng-Kui Qu

Precise: These findings reveal how deregulation of an important tyrosine phosphatase that modifies many pathways of cancer cell signaling contributes to malignant development.

Molecular Subsets of Mantle Cell Lymphoma Defined by the IGHV Mutational Status and SOX11 Expression Have Distinct Biologic and Clinical Features

Precise: This large multidisciplinary study of mantle cell lymphoma reveals 2 previously unrecognized subtypes that may have distinct origins and clinical implications.

In Vivo Regulation of TGF-β by R-Ras2 Revealed through Loss of the RasGAP Protein NFI

Deanna M. Patmore, Sara Welch, Patricia C. Fulkerson, Jangjiang Wu, Kwangmin Choi, David Eaves, Jennifer J. Kordich, Margaret H. Collins, Timothy P. Cripe, and Nancy Ratner

Precise: Findings that link the functions of TGF-β and R-Ras2/TC21, a little-studied member of the Ras superfamily, might explain why TGF-β suppresses tumors at early stages of development but later acts to promote tumor progression.

Leptin and Soluble Leptin Receptor in Risk of Colorectal Cancer in the European Prospective Investigation into Cancer and Nutrition Cohort

Precise: Elucidation of the etiologic pathways linking obesity and colorectal cancer risk may improve risk assessment and opportunities for lifestyle interventions.

ROCK1 and ROCK2 Are Required for Non-Small Cell Lung Cancer Anchorage-Independent Growth and Invasion

Dominico Vigil, Tai Young Kim, Ana Plachco, Andrew J. Garton, Linda Castaldo, Jonathan A. Puchter, Hanqing Dong, Xin Chen, Brianna Tokar, Sharon L. Campbell, and Channing J. Der

Precise: These findings define a specific small-molecule inhibitor of the Rho kinases and reveal the potential therapeutic benefits of targeting them in a model of lung adenocarcinoma.

Sorafenib Has Potent Antitumor Activity against Multiple Myeloma In Vitro, Ex Vivo, and In Vivo in the 5T33MM Mouse Model

Pedram Kharaziha, Hendrik De Raeve, Charlotte Fristedt, Qiao Li, Astrid Gruber, Per Johnsson, Georgia Kokaraki, Maria Panzar, Edward Laane, Anders Osterbørg, Boris Zhivotovsky, Helena Jernberg-Wiklund, Dan Grandé, Fredrik Celsing, Magnus Björkholm, Karin Vanderkerken, and Theocharis Panaretakis

Precise: Sorafenib, an approved broad-spectrum kinase inhibitor, might be repositioned to treat multiple myeloma, a highly aggressive cancer.
Natural Product Triptolide Mediates Cancer Cell Death by Triggering CDK7-Dependent Degradation of RNA Polymerase II

Stefano Giustino Manzo, Zhao-Li Zhou, Ying-Qing Wang, Jessica Marinello, Jin-Xue He, Yuan-Chao Li, Jian Ding, Giovanni Capranico, and Ze-Hong Miao

Précis: This study offers an explanation for how a key component of traditional Chinese medicine may mediate diverse medical effects, including anticancer effects.

GF-15, a Novel Inhibitor of Centrosomal Clustering, Suppresses Tumor Cell Growth In Vitro and In Vivo

Marc S. Raab, Iris Breitkreutz, Simon Anderhub, Mads H. Rønnest, Blanka Leber, Thomas O. Larsen, Ludmila Weiz, Gleb Konotop, Patrick J. Hayden, Klaus Podar, Johannes Fruerhaus, Felix Nissen, Walter Mier, Uwe Haberkorn, Anthony D. Ho, Hartmut Goldschmidt, Kenneth C. Anderson, Mads H. Clausen, and Alwin Krämer

Précis: This study reports the characterization of a first-in-class inhibitor of centrosomal clustering and its unique mechanistic approach to cancer cell killing.

Inhibition of Stathmin1 Accelerates the Metastatic Process

Karin Williams, Ritwik Ghosh, Premkumar Vummidi Giridhar, Guangyu Gu, Thomas Case, Scott M. Belcher, and Susan Kasper

Précis: These findings challenge the concept of strathmin as a cancer-promoting protein with evidence that it can restrain the invasive movement of metastatic cancer cells.

Inactivating All Three Rb Family Pocket Proteins Is Insufficient to Initiate Cervical Cancer

Myeong-Kyun Shin, Julien Sage, and Paul F. Lambert

Précis: These results provide a powerful argument that the HPV E7 oncoprotein drives cancer by binding to proteins other than the Rb family members, challenging central and long-standing assumptions in the field.

LETTERS TO THE EDITOR

Melanoma Cells Inhibit NK Cell Functions—Letter

Giuseppe Sconocchia, Roberto Arriga, Luigi Tornillo, Luigi Terracciano, Soldano Ferrone, and Giulio C. Spagnoli

Melanoma Cells Inhibit NK Cell Functions—Response

Gabriella Pietra, Massimo Vitale, Claudia Manzini, Mirna Balsamo, Lorenzo Moretta, and Maria Cristina Mingari

CORRECTION

Correction: Combination Therapy with HSP90 Inhibitor 17-DMAG Reconditions the Tumor Microenvironment to Improve Recruitment of Therapeutic T Cells

Yugang Wang, Goleeta N. Alam, Yu Ning, Fernanda Visioli, Zhihong Dong, Jacques E. Nör, and Peter J. Polverini

Précis: These results offer new mechanistic insights into the links between angiogenesis and the unfolded protein response, which may be activated nearly universally in cancer cells.
ABOUT THE COVER

Obesity, caused by overgrowth of fat tissue, was shown to be associated with expansion and mobilization of adipose progenitor cells and with increased tumor growth. Animal experiments show that adipose progenitors are recruited by tumors, where they incorporate into the blood vessels and differentiate into adipocytes. A confocal section micrograph of a breast tumor grown in an obese mouse shows vascular/perivascular cells and adipocytes derived from GFP-labeled (green) adipose cells. Vascular endothelium was costained with a CD31 antibody (red), while nuclear staining (blue) identified malignant cells lacking GFP and CD31. For details, see article by Zhang and colleagues on page 5198.
