Autologous Ectopic Grafting of Cryopreserved Testicular Tissue Preserves the Fertility of Prepubescent Monkeys That Receive Sterilizing Cytotoxic Therapy
Kirsti Jahnukainen, Jens Ehmcke, Mirja Nurmin, and Stefan Schlatt
Précis: This study addresses an important survivorship issue for pediatric male cancer patients in developing a proof-of-principle for methods to allow engraftment of immature testis tissue following therapy as a strategy to reduce or eliminate risks of future infertility.

POINT–COUNTERPOINT REVIEWS

RECAST: No Longer the Sharpest Tool in the Oncology Clinical Trials Toolbox—Point
Manish R. Sharma, Michael L. Maitland, and Mark J. Ratain
See Counterpoint and Reply by Fojo and Noonan, p. 5151 and p. 5150

RECAST: No Longer the Sharpest Tool in the Oncology Clinical Trials Toolbox—Reply to Point
Antonio T. Fojo and Anne Noonan
See Point by Sharma et al., p. 5145

RECAST Works and Why It Should Stay—Counterpoint
Antonio T. Fojo and Anne Noonan
See Point and Reply by Sharma et al., p. 5145 and p. 5158

RECAST Works and Why It Should Stay—Reply to Counterpoint
Manish R. Sharma, Michael L. Maitland, and Mark J. Ratain
See Counterpoint by Fojo and Noonan, p. 5151

MEETING REPORT

Changing the Tumor Microenvironment: New Strategies for Immunotherapy
Pedro Berraondo, Viktor Umansky, and Ignacio Melero

INTEGRATED SYSTEMS AND TECHNOLOGIES

An NMR Metabolomics Approach for the Diagnosis of Leptomeningeal Carcinomatosis
Hye Rim Cho, He Wen, Young Jin Ryu, Yong Jin An, Hyo Cheol Kim, Woo Kyung Moon, Moon Hee Han, Sunghyoun Park, and Seung Hong Choi
Précis: Preclinical proof-of-concept for metabolic typing of cerebral spinal fluid offers a tool to improve diagnostic accuracy of one of the more common types of metastatic invasion into the central nervous system, immediately prompting clinical testing of this approach.

MICROENVIRONMENT AND IMMUNOLOGY

Impaired IFN-α Production by Plasmacytoid Dendritic Cells Favors Regulatory T-cell Expansion That May Contribute to Breast Cancer Progression
Vanja Sisirak, Julien Faget, Michael Gobert, Nadège Giant, Nelly Vey, Isabelle Treilleux, Sarah Renaud, Gaëlle Peyot, Sana Intidhar Labidi-Galy, Sophie Godard-Leon, Isabelle Durand, Isabelle Le Mercier, Agathe Bajard, Thomas Bachelot, Alain Puisieux, Isabelle Puisieux, Jean-Yves Blay, Christine Ménetrier-Caux, Christophe Caux, and Nathalie Bendriss-Vermare
Précis: This study unravels the mechanistic basis for the negative impact of pDC infiltration in breast tumor and offers perspectives for new therapeutic strategies by targeting pDC to overcome immune tolerance in breast cancer.

RALBP1/RLIP76 Depletion in Mice Suppresses Tumor Growth by Inhibiting Tumor Neovascularization
Seunghyung Lee, Jeremy G. T. Wurtzel, Shauril S. Singhal, Sanjay Awasthi, and Lawrence E. Goldfinger
Précis: A widely expressed multifunctional protein that binds to Ral and R-Ras small GTPases is essential to support the blood vasculature in tumors, supporting its candidacy as a generalized anticancer target.

Précis: This study addresses an important survivorship issue for pediatric male cancer patients in developing a proof-of-principle for methods to allow engraftment of immature testis tissue following therapy as a strategy to reduce or eliminate risks of future infertility.
Stromal Progenitor Cells from Endogenous Adipose Tissue Contribute to Pericytes and Adipocytes That Populate the Tumor Microenvironment

Yan Zhang, Alexes C. Daquinag, Felipe Amaya-Manzanares, Olga Sirin, Chieh Tseng, and Mikhail G. Kolonin

Précis: This report suggests that obesity promotes cancer progression by providing a wellspring of adipose cells for tumors to recruit to their microenvironment, where they support angiogenesis and malignant outgrowth.

PD-1 Blockade Enhances T-cell Migration to Tumors by Elevating IFN-γ Inducible Chemokines

Weiyi Peng, Chengwen Liu, Chunyu Xu, Yanyan Lou, Jieqing Chen, Yan Yang, Hideo Yagita, Willem W. Overwijk, Gregory Lizée, Laszlo Radvanyi, and Patrick Hwu

Précis: Blocking immune escape mechanisms mediated by the PD-1 pathway may enhance a variety of cancer therapies, including adoptive T-cell treatments that have shown promise over the years but induce durable responses in a minority of patients.

TNF-α Mediates Macrophage-Induced Bystander Effects through Netrin-1

Yonghong Yang, Xingmin Wang, Danny R. Moore, Stanley A. Lightfoot, and Mark M. Huw

Précis: Commensal intestinal infections that may program inflammation in the colon tumor microenvironment influence a neuronal pathway with emerging importance in cancer.

A Retinoic Acid–Rich Tumor Microenvironment Provides Clonal Survival Cues for Tumor-Specific CD8+ T Cells

Yanxia Guo, Karina Pino-Lagos, Cory A. Ahonen, Kathy A. Bennett, Jinshan Wang, Joseph L. Napoli, Rune Blomhoff, Shanthini Sockanathan, Roshantha A. Chandraratna, Ethan Dmitrovsky, Mary Jo Turk, and Randolph J. Noelle

Précis: These findings reveal that tumor growth elevates retinoid acid within the tumor microenvironment and that this event is critical to maintain tumor-specific CD8+ T-cell clonal survival and to facilitate antitumor immunity, with mechanistic implications for immunovigilant.

Plasmacytoid Dendritic Cells Promote Immunosuppression in Ovarian Cancer via ICOS Costimulation of Foxp3+ T-Regulatory Cells

Curdin Conrad, Josh Gregorio, Yi-Hong Wang, Tomoki Ito, Stephan Meller, Shino Hanabuchi, Sonya Anderson, Neely Atkinson, Pedro T. Ramirez, Yong-Jun Liu, Ralph Freedman, and Michel Gillet

Précis: Findings identify a signaling pathway controlled by the T-cell coreceptor ICOS as a pivotal driver of immunosuppression in ovarian cancer.
Hypoxia-Induced Gene Expression in Chemoradioresistant Cervical Cancer Revealed by Dynamic Contrast-Enhanced MRI
Cathinka Halle, Erlend Andersen, Malin Lando, Eva-Katrine Jarnes, Grete Hasvold, Marit Holden, Randi G. Syljaasen, Kolbein Sundfør, Gunnar B. Kristensen, Ruth Holm, Eirik Malinen, and Heidi Lyng

Preceding a noninvasive imaging strategy has been found to identify patients who might benefit from hypoxic modification of chemoradiotherapy in cervical cancers.

Protein Tyrosine Phosphatase Shp2 (Ptpn11) Plays an Important Role in Maintenance of Chromosome Stability
Xia Liu, Hong Zheng, and Cheng-Kui Qu

Preceding these findings reveal how deregulation of an important tyrosine phosphatase that modifies many pathways of cancer cell signaling contributes to malignant development.

Molecular Subsets of Mantle Cell Lymphoma Defined by the IGHV Mutational Status and SOX11 Expression Have Distinct Biologic and Clinical Features

Preceding elucidation of the etiologic pathways linking obesity and colorectal cancer risk may improve risk assessment and opportunities for lifestyle interventions.

In Vivo Regulation of TGF-β by R-Ras2 Revealed through Loss of the RasGAP Protein NFI
Deanna M. Patmore, Sara Welch, Patricia C. Fulkerson, Jiangiang Wu, Kwangmin Choi, David Eaves, Jennifer J. Kordich, Margaret H. Collins, Timothy P. Cripe, and Nancy Ratner

Preceding this large multidisciplinary study of mantle cell lymphoma reveals 2 previously unrecognized subtypes that may have distinct origins and clinical implications.

Prevention and Epidemiology

Leptin and Soluble Leptin Receptor in Risk of Colorectal Cancer in the European Prospective Investigation into Cancer and Nutrition Cohort
Krasimira Aleksandrova, Heiner Boeing, Mazda Jenah, H. Bas Bueno-de-Mesquita, Eugene Jansen, Franzel J. B. van Duijn, Sabina Rinaldi, Veronika Fedirko, Isabelle Romieu, Elio Riboli, Marc J. Gunter, Sabine Westphal, Kim Overvad, Anne Tjønneland, Jytte Halkjær, Antoine Racine, Marie-Christine Boutron-Ruault, François Clavel-Chapelon, Rudolf Kaaks, Annekatrin Lukanova, Antonia Trichopoulos, Pagona Lagiou, Dimitrios Trichopoulos, Amalia Mattielli, Valéria Palá, Domenico Palli, Rosario Tumino, Paolo Vineis, Genevieve Buckland, María-José Sánchez, Pilar Amiano, José María Huerta, Christel Feher, Richard Palmqvist, Naomi E. Allen, Francesca L. Crowe, Kay-Tee Khaw, Nickolas Wareham, and Tobias Pischon

Preceding these findings define a specific small-molecule inhibitor of the Rho kinases and reveal the potential therapeutic benefits of targeting them in a model of lung adenocarcinoma.

THERAPEUTICS, TARGETS, AND CHEMICAL BIOLOGY

ROCK1 and ROCK2 Are Required for Non-Small Cell Lung Cancer Anchorage-Independent Growth and Invasion
Dominico Vigil, Tai Young Kim, Ana Plachco, Andrew J. Garton, Linda Castaldo, Jonathan A. Pachter, Hanqing Dong, Xin Chen, Brianna Tokar, Sharon L. Campbell, and Theocharis Panaretakis

Preceding these findings define a specific small-molecule inhibitor of the Rho kinases and reveal the potential therapeutic benefits of targeting them in a model of lung adenocarcinoma.

Sorafenib Has Potent Antitumor Activity against Multiple Myeloma In Vitro, Ex Vivo, and In Vivo in the 5T33MM Mouse Model
Pedram Kharaziha, Hendrik De Raeye, Charlotte Fristedt, Qiao Li, Astrid Gruber, Per Johnsson, Georgia Kokaraki, Maria Panzar, Edward Laane, Anders Osterborg, Boris Zhivotovsky, Helena Jernberg-Wiklund, Dan Grandé, Fredrik Celsing, Magnus Björkholm, Karin Vanderkerken, and Theocharis Panaretakis

Preceding sorafenib, an approved broad-spectrum kinase inhibitor, might be repositioned to treat multiple myeloma, a highly aggressive cancer.
Natural Product Triptolide Mediates Cancer Cell Death by Triggering CDK7-Dependent Degradation of RNA Polymerase II
Stefano Giustino Manzo, Zhao-Li Zhou, Ying-Qing Wang, Jessica Marinello, Jin-Xue He, Yuan-Chao Li, Jian Ding, Giovanni Capranico, and Ze-Hong Miao

Précis: This study offers an explanation for how a key component of traditional Chinese medicine may mediate diverse medical effects, including anticancer effects.

GF-15, a Novel Inhibitor of Centrosomal Clustering, Suppresses Tumor Cell Growth In Vitro and In Vivo
Marc S. Raab, Iris Breitkreutz, Simon Anderhub, Mads H. Rønnest, Blanka Leber, Thomas O. Larsen, Ludmila Weiz, Gleb Konotop, Patrick J. Hayden, Klaus Podar, Johannes Friehauf, Felix Nissen, Walter Mier, Uwe Haberkorn, Anthony D. Ho, Hartmut Goldschmidt, Kenneth C. Anderson, Mads H. Clausen, and Alwin Kramer

Précis: This study reports the characterization of a first-in-class inhibitor of centrosomal clustering and its unique mechanistic approach to cancer cell killing.

Mammalian Sterile 20–like Kinase 1 Suppresses Lymphoma Development by Promoting Faithful Chromosome Segregation
Tae-Shin Kim, Da-Hye Lee, Sang Kyum Kim, So Youn Shin, Eul-Ju Seo, and Dae-Sik Lim

Précis: The Hippo pathway has been implicated in oncogenesis of solid tumors, but these findings reveal that its core component may exert a tumor-suppressive function in blood cell tumors based on its ability to prevent chromosomal instability in lymphocytes.

The Unfolded Protein Response Induces the Angiogenic Switch in Human Tumor Cells through the PERK/ATF4 Pathway
Yugang Wang, Goleeta N. Alam, Yu Ning, Fernanda Visioli, Zhihong Dong, Jacques E. Nör, and Peter J. Polverini

Précis: These results offer new mechanistic insights into the links between angiogenesis and the unfolded protein response, which may be activated nearly universally in cancer cells.
ABOUT THE COVER

Obesity, caused by overgrowth of fat tissue, was shown to be associated with expansion and mobilization of adipose progenitor cells and with increased tumor growth. Animal experiments show that adipose progenitors are recruited by tumors, where they incorporate into the blood vessels and differentiate into adipocytes. A confocal section micrograph of a breast tumor grown in an obese mouse shows vascular/perivascular cells and adipocytes derived from GFP-labeled (green) adipose cells. Vascular endothelium was costained with a CD31 antibody (red), while nuclear staining (blue) identified malignant cells lacking GFP and CD31. For details, see article by Zhang and colleagues on page 5198.
