Stromal Progenitor Cells from Endogenous Adipose Tissue Contribute to Pericytes and Adipocytes That Populate the Tumor Microenvironment

Yan Zhang, Alexes C. Daquinag, Felipe Amaya-Manzanares, Olga Sirin, Chieh Tseng, and Mikhail G. Kolonin

Precis: This report suggests that obesity promotes cancer progression by providing a wellspring of adipose cells for tumors to recruit to their microenvironment, where they support angiogenesis and malignant outgrowth.

MOLECULAR AND CELLULAR PATHOBIOLOGY

PD-1 Blockade Enhances T-cell Migration to Tumors by Elevating IFN-γ Inducible Chemokines

Weiyi Peng, Chengwen Liu, Chunyu Xu, Yanyan Lou, Jieqing Chen, Yan Yang, Hideo Yagita, Willem W. Overwijk, Gregory Lizée, Laszlo Radvanyi, and Patrick Hwu

Precis: Blocking immune escape mechanisms mediated by the PD-1 pathway may enhance a variety of cancer therapies, including adoptive T-cell treatments that have shown promise over the years but induce durable responses in a minority of patients.

TNF-α Mediates Macrophage-Induced Bystander Effects through Netrin-1

Yonghong Yang, Xingmin Wang, Danny R. Moore, Stanley A. Lightfoot, and Mark M. Huycke

Precis: Commensal intestinal infections that may program inflammation in the colon tumor microenvironment influence a neural pathway with emerging importance in cancer.

A Retinoic Acid–Rich Tumor Microenvironment Provides Clonal Survival Cues for Tumor-Specific CD8+ T Cells

Yanxia Guo, Karina Pino-Lagos, Cory A. Ahonen, Kathy A. Bennett, Jinshan Wang, Joseph L. Napoli, Rune Blomhoff, Shanthini Sockanathan, Roshantha A. Chandraratna, Ethan Dmitrovsky, Mary Jo Turk, and Randolph J. Noelle

Precis: These findings reveal that tumor growth elevates retinoic acid within the tumor microenvironment and that this event is critical to maintain tumor-specific CD8+ T-cell clonal survival and to facilitate antitumor immunity, with mechanistic implications for immunoediting.

Plasmacytoid Dendritic Cells Promote Immunosuppression in Ovarian Cancer via ICOS Costimulation of Foxp3+ T-Regulatory Cells

Curdin Conrad, Josh Gregorio, Yi-Hong Wang, Tomoki Ito, Stephan Meller, Shino Hanabuchi, Sonya Anderson, Neely Atkinson, Pedro T. Ramirez, Yong-Jun Liu, Ralph Freedman, and Michel Gillet

Precis: Findings identify a signaling pathway controlled by the T-cell coreceptor ICOS as a pivotal driver of immunosuppression in ovarian cancer.

53BP1 Is a Haploinsufficient Tumor Suppressor and Protects Cells from Radiation Response in Glioma

Massimo Squatrito, Fabio Yanoli, Nikolaus Schultz, Maria Jasins, and Eric C. Holland

Precis: These findings suggest that components of the nonhomologous end-joining system of DNA repair may be good therapeutic targets to improve treatment of aggressive brain tumors.

Clusterin Mediates TGF-β–Induced Epithelial–Mesenchymal Transition and Metastasis via Twist1 in Prostate Cancer Cells

Masaki Shiota, Anousheh Zardan, Ario Takeuchi, Masafumi Kumano, Eliana Beraldí, Seiji Naito, Amina Zoubéidi, and Martin E. Gleave

Precis: These findings identify a new link between TGF-β and the epithelial–mesenchymal transition that could be targeted to block prostate cancer metastasis.

Multilevel Whole-Genome Analysis Reveals Candidate Biomarkers in Clear Cell Renal Cell Carcinoma

Andrew H. Girgis, Vladimir V. Iakovlev, Ben Beheshti, Jane Bayani, Jeremy A. Squire, Anna Bui, Marina Mankarou, Youssef Youssef, Bishoy Khalil, Heba Khella, Maria Pasic, and George M. Yousef

Precis: In addition to mutation and expression analyses, the analysis of gene methylation and gene-copy number as part of an integrated whole-genome analysis may provide a more comprehensive understanding of cancer heterogeneity to improve diagnosis, prognosis, and therapy.
Hypoxia-Induced Gene Expression in Chemoradioresistant Cervical Cancer Revealed by Dynamic Contrast-Enhanced MRI
Cathinka Halle, Erlend Andersen, Malin Lando, Eva-Katrine Aarnes, Grete Hasvold, Marit Holden, Randi G. Syljåsøen, Kolbein Sundfør, Gunnar B. Kristensen, Ruth Holm, Eirik Malinen, and Heidi Lyng

Précis: A noninvasive imaging strategy has been found to identify patients who might benefit from hypoxic modification of chemoradiotherapy in cervical cancers.

Protein Tyrosine Phosphatase Shp2 (Ptpn11) Plays an Important Role in Maintenance of Chromosome Stability
Xia Liu, Hong Zheng, and Cheng-Kui Qu

Précis: These findings reveal how deregulation of an important tyrosine phosphatase that modifies many pathways of cancer cell signaling contributes to malignant development.

Molecular Subsets of Mantle Cell Lymphoma Defined by the IGHV Mutational Status and SOX11 Expression Have Distinct Biologic and Clinical Features

Précis: This large multidisciplinary study of mantle cell lymphoma reveals 2 previously unrecognized subtypes that may have distinct origins and clinical implications.

In Vivo Regulation of TGF-β by R-Ras2 Revealed through Loss of the RasGAP Protein NFI
Deanna M. Patmore, Sara Welch, Patricia C. Fulkerson, Jangjang Wu, Kwangmin Choi, David Eaves, Jennifer J. Kordich, Margaret H. Collins, Timothy P. Cripe, and Nancy Ratner

Précis: Findings that link the functions of TGF-β and R-Ras2/TC21, a little-studied member of the Ras superfamily, might explain why TGF-β suppresses tumors at early stages of development but later acts to promote tumor progression.

Leptin and Soluble Leptin Receptor in Risk of Colorectal Cancer in the European Prospective Investigation into Cancer and Nutrition Cohort

Précis: Elucidation of the etiologic pathways linking obesity and colorectal cancer risk may improve risk assessment and opportunities for lifestyle interventions.

ROCK1 and ROCK2 Are Required for Non-Small Cell Lung Cancer Anchorage-Independent Growth and Invasion
Dominico Vigil, Tai Young Kim, Ana Plachco, Andrew J. Garton, Linda Castaldo, Jonathan A. Pachter, Hanqing Dong, Xin Chen, Brianna Tokar, Sharon L. Campbell, and Channing J. Der

Précis: These findings define a specific small-molecule inhibitor of the Rho kinases and reveal the potential therapeutic benefits of targeting them in a model of lung adenocarcinoma.

Sorafenib Has Potent Antitumor Activity against Multiple Myeloma In Vitro, Ex Vivo, and In Vivo in the 5T33MM Mouse Model
Pedram Kharazizha, Hendrik De Raeye, Charlotte Fristedt, Qiao Li, Astrid Gruber, Per Johnsson, Georgia Kokaraki, Maria Panzar, Edward Laane, Anders Österborg, Boris Zhivotovsky, Helena Jernberg-Wiklund, Dan Grandé, Fredrik Celsing, Magnus Björkholt, Karin Vanderkerken, and Theocharis Panaretakis

Précis: Sorafenib, an approved broad-spectrum kinase inhibitor, might be repositioned to treat multiple myeloma, a highly aggressive cancer.
Natural Product Triptolide Mediates Cancer Cell Death by Triggering CDK7-Dependent Degradation of RNA Polymerase II
Stefano Giustino Manzo, Zhao-Li Zhou, Ying-Qing Wang, Jessica Marinello, Jin-Xue He, Yuan-Chao Li, Jian Ding, Giovanni Capranico, and Ze-Hong Miao
Précis: This study offers an explanation for how a key component of traditional Chinese medicine may mediate diverse medical effects, including anticancer effects.

GF-15, a Novel Inhibitor of Centrosomal Clustering, Suppresses Tumor Cell Growth In Vitro and In Vivo
Marc S. Raab, Iris Breitkreutz, Simon Anderhub, Mads H. Rønnest, Blanka Leber, Thomas O. Larsen, Ludmila Weiz, Gleb Konotop, Patrick J. Hayden, Klaus Podar, Johannes Freuerhaus, Felix Nissen, Walter Mier, Uwe Haberkorn, Anthony D. Ho, Hartmut Goldschmidt, Kenneth C. Anderson, Mads H. Clausen, and Alwin Krämer
Précis: This study reports the characterization of a first-in-class inhibitor of centrosomal clustering and its unique mechanistic approach to cancer cell killing.

Mammalian Sterile 20–like Kinase 1 Suppresses Lymphoma Development by Promoting Faithful Chromosome Segregation
Tae-Shin Kim, Da-Hye Lee, Sang Kyum Kim, So Youn Shin, Eul-Ju Seo, and Dae-Sik Lim
Précis: The Hippo pathway has been implicated in oncogenesis of solid tumors, but these findings reveal that its core component may exert a tumor-suppressive function in blood cell tumors based on its ability to prevent chromosomal instability in lymphocytes.

The Unfolded Protein Response Induces the Angiogenic Switch in Human Tumor Cells through the PERK/ATF4 Pathway
Yugang Wang, Goleeta N. Alam, Yu Ning, Fernanda Visioli, Zhihong Dong, Jacques E. Nor, and Peter J. Polverini
Précis: These results offer new mechanistic insights into the links between angiogenesis and the unfolded protein response, which may be activated nearly universally in cancer cells.

Inhibition of Stathmin1 Accelerates the Metastatic Process
Karin Williams, Ritwik Ghosh, Premkumar Vummidi Giridhar, Guangyu Gu, Thomas Case, Scott M. Belcher, and Susan Kasper
Précis: These findings challenge the concept of strathmin as a cancer-promoting protein with evidence that it can restrain the invasive movement of metastatic cancer cells.

Inactivating All Three Rb Family Pocket Proteins Is Insufficient to Initiate Cervical Cancer
Myeong-Kyun Shin, Julien Sage, and Paul F. Lambert
Précis: These results provide a powerful argument that the HPV E7 oncoprotein drives cancer by binding to proteins other than the Rb family members, challenging central and long-standing assumptions in the field.

Melanoma Cells Inhibit NK Cell Functions—Letter
Giuseppe Sconocchia, Roberto Arriga, Luigi Tornillo, Luigi Terracciano, Soldano Ferrone, and Giulio C. Spagnoli

Melanoma Cells Inhibit NK Cell Functions—Response
Gabriella Pietra, Massimo Vitale, Claudia Manzini, Mirna Balsamo, Lorenzo Moretta, and Maria Cristina Mingari

Correction: Combination Therapy with HSP90 Inhibitor 17-DMAG Reconditions the Tumor Microenvironment to Improve Recruitment of Therapeutic T Cells

LETTERS TO THE EDITOR

CORRECTION
ABOUT THE COVER

Obesity, caused by overgrowth of fat tissue, was shown to be associated with expansion and mobilization of adipose progenitor cells and with increased tumor growth. Animal experiments show that adipose progenitors are recruited by tumors, where they incorporate into the blood vessels and differentiate into adipocytes. A confocal section micrograph of a breast tumor grown in an obese mouse shows vascular/perivascular cells and adipocytes derived from GFP-labeled (green) adipose cells. Vascular endothelium was costained with a CD31 antibody (red), while nuclear staining (blue) identified malignant cells lacking GFP and CD31. For details, see article by Zhang and colleagues on page 5198.
