**INTEGRATED SYSTEMS AND TECHNOLOGIES**

6351 | An Integrated Genome-Wide Approach to Discover Tumor-Specific Antigens as Potential Immunologic and Clinical Targets in Cancer  
Qing-Wen Xu, Wei Zhao, Yue Wang,  
Maureen A. Sartor, Dong-Mei Han, Jixin Deng,  
Rakesh Ponnala, Jiang-Ying Yang,  
Qing-Yun Zhang, Guo-Qing Liao, Yi-Mei Qu, Lu Li,  
Fang-Fang Liu, Hong-Mei Zhao, Yan-Hui Yin,  
Wei-Feng Chen, Yu Zhang, and Xiao-Song Wang  
**Précis:** This important paper reports an integrated technology to uncover the cancer-specific antigen genome as a reservoir for novel immunological and clinical targets.

6362 | Evolutionary Approaches to Prolong Progression-Free Survival in Breast Cancer  
Ariosto S. Silva, Yoonseok Kam, Zayar P. Khin,  
Susan E. Minton, Robert J. Gillies, and  
Robert A. Gatenby  
**Précis:** This work challenges the paradigm of maximum tolerated dose for drug treatment in cancer by proposing a combination strategy to burden chemoresistant cells with a chronic futile efflux of noncytotoxic drugs, with only the minimal chemotherapy dose needed to block tumor growth.

**MICROENVIRONMENT AND IMMUNOLOGY**

6371 | Neuropilin-1 Identifies a Subset of Bone Marrow Gr1+ Monocytes That Can Induce Tumor Vessel Normalization and Inhibit Tumor Growth  
Alessandro Carrer, Silvia Moomas,  
Serena Zucchigna, Lucia Battarini,  
Lorena Zentini, Giulia Ruozzi, Miguel Mano,  
Milena Sinigaglia, Federico Mainone, Guido Serini,  
Enrico Giraudo, Federico Bussolino, and  
Mauro Giacca  
**Précis:** Neuropilin-1 expressing monocytes (NEM) are able to stabilize the tumor vasculature, thereby improving tumor oxygenation and reducing tumor malignancy, invasiveness, and resistance to chemotherapy.

**Molecular and Cellular Pathobiology**

- **Polyplloidization of Murine Mesenchymal Cells Is Associated with Suppression of the Long Noncoding RNA H19 and Reduced Tumorigenicity**
  - Ofer Shoshani, Hassan Massalha, Nir Shani, Sivan Kagan, Orly Ravid, Shalom Madar, Luba Trakhtenbrot, Dena Leshkowitz, Gideon Rechavi, and Dov Zipori
  - *Précis*: Findings reveal a critical link between a noncoding RNA and the polyplloid character and low tumorigenicity of mesenchymal stromal cells.

- **Loss of PPP2R2A Inhibits Homologous Recombination DNA Repair and Predicts Tumor Sensitivity to PARP Inhibition**
  - Peter Kalev, Michal Simiecek, Iria Vazquez, Sebastian Munck, Liping Chen, Thomas Soin, Natasha Dunda, Wen Chen, and Anna Sabina
  - *Précis*: Findings suggest that downregulation of a PPP2A family phosphatase in tumors may predict therapeutic responses to a promising new class of anticancer agents currently in clinical trials.

**Therapeutics, Targets, and Chemical Biology**

- **Systemic Delivery of Salmonella typhimurium Transformed with IDO shRNA Enhances Intratumoral Vector Colonization and Suppresses Tumor Growth**
  - Céline A. Blache, Edwin R. Manuel, Teodora I. Kaltcheva, Andrea N. Wong, Joshua D.I. Ellenbrom, Bruce R. Blazar, and Don J. Diamond
  - *Précis*: IDO blockade can leverage hypoxia-targeting infections that recruit neutrophils with powerful tumor-killing capacity, further expanding the broad acting modifier effects of IDO on adaptive and innate mechanisms of immune escape in tumors.

- **Modulation of the ATPase and Transport Activities of Broad-Acting Multidrug Resistance Factor ABCC10 (MRP7)**
  - Ekaterina V. Malofeeva, Natalya Domanitskaya, Mariya Gudima, and Elizabeth A. Hopper-Borge
  - *Précis*: Findings suggest that the approved multikinase inhibitor sorafenib may enhance chemotherapeutic efficacy of drugs that are effluxed by an important mediator of drug resistance in cancer cells.
6468 elf4E/4E-BP Ratio Predicts the Efficacy of mTOR Targeted Therapies
Tommy Alain, Masahiro Morita, Bruno D. Fonseca, Akiko Yanagiya, Nadeem Siddiqui, Mamatha Bhat, Domenick Zammit, Victoria Marcus, Peter Metrakos, Lucie-Anne Voyer, Valentina Gandin, Yi Liu, Ivan Topisirovic, and Nahum Sonenberg

Précis: This report establishes that a ratio of the translational regulatory factors elf4E and 4E-BP, rather than simply their individual levels or phosphorylation status, may serve as a generalized marker to predict the clinical therapeutic response to mTOR inhibitors in any cancer setting.

TUMOR AND STEM CELL BIOLOGY
6477 Cyclin D1 Activity Regulates Autophagy and Senescence in the Mammary Epithelium
Nelson E. Brown, Rinath Jeselsohn, Teeru Bihani, Miaofen G. Hu, Parthena Foltopoulou, Charlotte Kupershaw, and Philip W. Hinds

Précis: Mammary epithelial cells expressing a kinase defective cyclin D1 survive due to an upregulation of autophagy, which if blocked, results in senescence.

6490 Obesity and Overfeeding Affecting Both Tumor and Systemic Metabolism Activates the Progesterone Receptor to Contribute to Postmenopausal Breast Cancer
Erin D. Giles, Elizabeth A. Wellberg, David P. Astling, Steven M. Anderson, Ann D. Thor, Sonali Jindal, Aik-Choon Tan, Pepper S. Schedin, and Paul S. MacLean

Précis: Striking findings may help explain why obese postmenopausal women have relatively increased risks of breast cancer.

6512 The CRCT1-NEDD9 Signaling Axis Mediates Lung Cancer Progression Caused by LKB1 Loss
Yan Feng, Ye Wang, Zhaoyuan Fang, Fei Li, Yijun Gao, Hongyan Liu, Tian Xiao, Fuming Li, Yang Zhou, Qiwei Zhai, Xiaolong Liu, Yihua Sun, Nabeel Bardeesy, Kwok-kin Wong, Haiquan Chen, Zhi-qi Xiong, and Hongbin Ji

Précis: Results decipher the mechanism through which mutation of the tumor suppressor LKB1 in lung cancer leads to progression and metastasis, offering mechanistic insights into how to attack these processes.

Correction: The Kynurenine Pathway in Brain Tumor Pathogenesis

ABOUT THE COVER
Obesity increases the risk for breast cancer after menopause. Animal studies reveal that obesity and ovariectomy-induced overfeeding converge to promote progesterone receptor (PR)-positive mammary tumors as shown by high nuclear PR immunohistochemical staining. Elevated PR expression positively correlated with tumor expression of glycolytic and lipogenic enzymes, glucose uptake, and proliferation markers. A similar relationship between PR expression and metabolic capacity was observed in tumors from postmenopausal women. Metformin treatment during the window of weight gain following ovariectomy caused PR downregulation and tumor regression. For details, see article by Giles and colleagues on page 6490.
