Highlights from Recent Cancer Literature 3481

From Integrative Genomics to Therapeutic Targets 3483
Rachael Natrajan and Paul Wilkerson

HER2 and Breast Cancer Stem Cells: More than Meets the Eye 3489
Hasan Korkaya and Max S. Wicha

APOBEC3 Cytidine Deaminases in Double-Strand DNA Break Repair and Cancer Promotion 3494
Roni Nowarski and Moshe Kotler

Immune Infiltrates Are Prognostic Factors in Localized Gastrointestinal Stromal Tumors 3499
Sylvie Rusakiewicz, Michaela Semeraro, Matthieu Sarabi, Mélanie Desbois, Clara Locher, Rosa Mendez, Nadjére Vimond, Angel Concha, Federico Garrido, Nicolas Isambert, Loïc Chaigneau, Valériane Le Brun-Ly, Patrice Duheuillet, Isabelle Cremer, Anne Caignard, Vichnou Poirier-Colame, Kariman Chaba, Caroline Flamant, Niels Halama, Dirk Jäger, Alexander Eggemont, Sylvie Bonvalot, Frédéric Commo, Philippe Terrier, Paule Opolon, Jean-François Emile, Jean-Michel Coindre, Guido Kroemer, Nathalie Chaput, Axel Le Cesne, Jean-Yves Blay, and Laurence Zitvogel

Kinetic Modeling-Based Detection of Genetic Signatures That Provide Chemoresistance via the E2F1-p73/DNp73-miR-205 Network 3511
Julio Vera, Ulf Schmitz, Xin Lai, David Engelmann, Faiz M. Khan, Olaf Wolkenhauer, and Brigitte M. Pützer

Précis: Experimental and in silico data were used with kinetic modeling to develop a model that can detect a genetic signature that confers aggressive phenotypes in cancer cells.

Mathematical Modeling of Tumor Cell Proliferation Kinetics and Label Retention in a Mouse Model of Lung Cancer 3525
Yanyan Zheng, Helen Moore, Alexandra Pyriatinska, Trinidad Solis, and E. Alejandro Sweet-Cordero

Précis: Mathematical methods to quantify the proportion and doubling time of cycling tumor cell subpopulations in tumors, which tend to respond relatively poorly to cytotoxic therapies, may provide a tool to assess preclinical models, in which direct observation of cell-cycle kinetics may not be readily experimentally accessible.

Tumor–Immune Dynamics Regulated in the Microenvironment Inform the Transient Nature of Immune-Induced Tumor Dormancy 3534
Kathleen P. Wilkie and Philip Hahnfeldt

Précis: Better understanding of immune-induced tumor dormancy may lead to insights into prognosis and improved therapy for example by tilting host innate or adaptive responses toward those that favor tumor elimination over immune escape.

Booster Vaccinations against Cancer Are Critical in Prophylactic but Detrimental in Therapeutic Settings 3545
Alessia Ricupito, Matteo Grioni, Arianna Calcinotto, Rodrigo Hess Michelini, Renato Longhi, Anna Mondino, and Matteo Bellone

Précis: This study challenges the notion that repeatedly boosting tumor-bearing subjects with a vaccine can sustain protective, long-lasting antitumor immunity, instead showing that certain prime-boost strategies actually drive T-cell exhaustion rather than expansion and memory.
### A Novel Model for Evaluating Therapies Targeting Human Tumor Vasculature and Human Cancer Stem–like Cells

Daniela Burgos-Ojeda, Karen McLean, Shoumei Bai, Heather Pulaski, Yusong Gong, Ines Silva, Karl Skorecki, Maty Tzukerman, and Ronald J. Buckanovich

**Précis:** There remains a great need for preclinical models that can more accurately predict clinical responses to novel experimental therapeutic agents in development.

### Enhanced Effector Responses in Activated CD8+ T Cells Deficient in Diacylglycerol Kinases

Matthew J. Riese, Liang-Chuan S. Wang, Edmund K. June, Gary A. Koretzky, and Steven M. Albelda

**Précis:** Targeting of diacylglycerol kinases offers a general approach to enhance the function of chimeric antigen receptor T cells (CART cells), a promising new strategy for cancer immunotherapy.

### SOCS3 Transactivation by PPARγ Prevents IL-17–Driven Cancer Growth

Hélène Berger, Frédérique Végran, Madjid Chikh, Federica Gilardi, Sylvain Ladoire, Hélène Bugaut, Grégoire Mignot, Fanny Chalmin, Mélanie Bruchard, Valentin Derangère, Angélique Chevriaux, Cédric Rébé, Bernhard Ryffel, Caroline Pot, Aziz Hichami, Béatrice Desvergne, François Gihringelli, and Lionel Apetoh

**Précis:** This study reveals new mechanistic insights into how inflammation supports cancer, and how blocking certain inflammatory pathways can restrict cancer.

### Dual Blockade of PD-1 and CTLA-4 Combined with Tumor Vaccine Effectively Restores T-Cell Rejection Function in Tumors

Jaikumar Duraiswamy, Karen M. Kaluza, Gordon J. Freeman, and George Coukos

**Précis:** Combined checkpoint blockade is synergistic and strongly augments the efficacy of vaccination to restore T-cell exhaustion and promote tumor rejection.

### BMP-6 in Renal Cell Carcinoma Promotes Tumor Proliferation through IL-10–Dependent M2 Polarization of Tumor-Associated Macrophages

Jae-Ho Lee, Geum Taek Lee, Seung Hye Woo, Yun-Sok Ha, Seok Joo Kwon, Wun-Jae Kim, and Isaac Yi Kim

**Précis:** Elevated IL-10 levels have been broadly associated with tumor tolerance and immune escape, but the basis for IL-10 upregulation and its critical cellular targets in tumors have not been fully clear.

### YAP/TEAD–Mediated Transcription Controls Cellular Senescence

Qi Xie, Jing Chen, Han Feng, Shengyi Peng, Ursula Adams, Yujie Bai, Li Huang, Ji Li, Junjian Huang, Songshu Meng, and Zengqiang Yuan

**Précis:** These findings offer general significance in cancers in which cellular senescence acts as a tumor suppressor, with implications for novel therapeutic approaches to stanch tumor growth.

### ATF3 Suppresses Metastasis of Bladder Cancer by Regulating Gelsolin-Mediated Remodeling of the Actin Cytoskeleton

Xiangliang Yuan, Liang Yu, Junhua Li, Guohua Xie, Tingting Rong, Liang Zhang, Jianhua Chen, Qiaoqiong Meng, Aaron T. Irving, Die Wang, Elizabeth D. Williams, Jun-Ping Liu, Anthony J. Sadler, Bryan R.G. Williams, Lizong Shen, and Dakang Xu

**Précis:** Mechanistic findings identify a transcription factor that suppresses metastasis of bladder cancer cells, suggesting new markers and strategies to define and address aggressive bladder tumors.

### Nkx2-8 Downregulation Promotes Angiogenesis and Activates NF-κB in Esophageal Cancer

Chuyong Lin, Libing Song, Hui Gong, Aibin Liu, Xi Lin, Jueheng Wu, Mengfeng Li, and Jun Li

**Précis:** These findings define a new tumor suppressor in esophageal cancer, the downregulation of which contributes to NF-κB activation and tumor angiogenesis.

### Targeting ROR1 Inhibits Epithelial–Mesenchymal Transition and Metastasis

Bing Cui, Suping Zhang, Liguang Chen, Jianqiang Yu, George F. Widhopf II, Jessie-F. Fecteau, Laura Z. Rassenti, and Thomas J. Kipps

**Précis:** As a pivotal step in what converts curable benign tumors to untreatable malignant cancers, the cellular process of EMT and the key factors regulating it remain an important focus of attention in identifying cancer-specific therapies.

DDB2 Suppresses Epithelial-to-Mesenchymal Transition in Colon Cancer
Nilotpal Roy, Prashant V. Bommi, Uppoor G. Bhat, Shaumick Bhattacharjee, Indira Elangovan, Jing Li, Krushna C. Patra, Dragana Kopanja, Adam Blunier, Richard Benya, Srilata Bagchi, and Pradip Raychaudhuri

Précis: A nucleotide excision repair protein is found to function as an inhibitor of EMT, a phenotypic change in transformed epithelial cells that facilitates invasion and metastasis, suggesting a direct link between these processes during tumorigenesis.

GDNF–RET Signaling in ER-Positive Breast Cancers Is a Key Determinant of Response and Resistance to Aromatase Inhibitors
Andrea Morandi, Lesley-Ann Martin, Qiong Gao, Sunil Pancholi, Alan Mackay, David Robertson, Marketa Zvelebil, Mitch Dowsett, Ivan Plaza-Menacho, and Clare M. Isacke

Précis: This study addresses the clinical challenge of therapeutic resistance in oncology, in this case by defining an important tractable pathway of resistance to aromatase inhibitors used to fight ER-positive breast cancer.

ABOUT THE COVER
Inhibition of VEGF signaling reduces angiogenesis and slows tumor growth, but can also promote lymph node metastasis in some preclinical models. Studies of RIP-Tag2 transgenic mice revealed that inhibition of VEGF signaling by a function blocking anti-VEGF antibody or the receptor tyrosine kinase inhibitor sunitinib increased the number of intratumoral lymphatics, the proportion of lymphatics with tumor cells inside, and the incidence of lymph node metastasis. After the treatment, c-Met was upregulated in lymphatics in and around the tumors. Importantly, inhibition of c-Met by PF-04217903 administered with the angiogenesis inhibitor significantly reduced the abundance of intratumoral lymphatics, tumor cells inside lymphatics, and lymph node metastases. For details, see article by Sennino and colleagues on page 3692.
